Dear Ms. Westerbeke:

In accordance with the executed Agreement to Provide Access for Sampling Activities, and in accordance with Wisconsin Department of Natural Resources (WDNR) regulation NR 716.14, Environmental Forensic Investigations, Inc. (EnviroForensics) is providing the results of environmental groundwater samples collected from City of Port Washington owned property located at 126 East Grand Avenue and from the Grand Avenue right-of-way in Port Washington, Wisconsin. The samples were collected between the dates of January 9 and January 24, 2024.

The sampling activities are part of an environmental investigation being performed for the Harborview Cleaners facility located at 134 East Grand Avenue in Port Washington, Wisconsin at the direction of the WDNR. The chemicals of concern for the investigation are the dry cleaning solvent tetrachloroethene (PCE) and its associated breakdown products.

Sampling Results

New groundwater monitoring wells MW-6 and MW-7 were installed on January 8, 2024 at the locations shown on attached **Figure 1**. As part of the installation process, soil samples were collected continuously and field screened for volatile organic compounds. Two (2) soil samples were collected from each well boring; one (1) from the zone of direct contact (1-4 feet deep), and one (1) from a deeper interval depending on field screening readings. These soil samples were sent to a Wisconsin Certified laboratory and analyzed for total volatile organic compounds. None of the four (4) soil samples collected contained volatile organic compounds at concentrations above the laboratory detection limits.

Groundwater samples were collected from three (3) monitoring wells designated MW-4, MW-5, and PZ-1 on January 9-10, 2024. Due to slow recharge, new water table monitoring wells MW-6 and MW-7 were sampled on January 24, 2024. The well locations are depicted on attached

Figure 1. The groundwater analytical results are summarized in **Table 1**, and an excerpt of the laboratory report that relates to the groundwater samples is also attached.

PCE was detected in the groundwater samples collected from MW-4 and MW-5 at estimated concentrations of 1.82 micrograms per liter ($\mu\text{g/l}$) and 1.39 $\mu\text{g/l}$, respectively. These concentrations are “J”-flagged by the analytical laboratory which means that the concentrations were above the laboratory method detection limit, but below the levels of accurate quantification. Therefore, the concentrations cannot be said to exceed the preventative action limit (PAL) of 0.5 $\mu\text{g/l}$ and are below the enforcement standard (ES) of 5 $\mu\text{g/l}$ established for PCE. No other chlorinated compounds of concern were detected in any of the groundwater samples collected.

A vapor sample was collected from an existing sub-slab port in the basement of the Pebble house located at 126 E. Grand Avenue. In addition, passive indoor air samplers were deployed on January 10, 2024 within the basement and first floor of Pebble House. A figure is attached showing the locations of vapor intrusion samples. A passive sampler was also deployed to the north and east of the Pebble House in the up-gradient direction of prevailing wind at that time. The sample is labeled 6348-OA on the attached figure. The passive indoor air samples collected from the basement and first floor of the building along with the outside air sample were left in place for a period of 14 days to provide a time-weighted average over a longer exposure period.

As can be seen in attached **Table 2**, PCE was detected in the sub-slab vapor sample at a concentration of 128 micrograms per cubic meter ($\mu\text{g/m}^3$) and trichloroethene (TCE) was detected at a concentration of 19.8 $\mu\text{g/m}^3$. Both of these concentrations are below the small commercial vapor risk screening levels (VRSLs) for these compounds of 5,800 $\mu\text{g/m}^3$ and 290 $\mu\text{g/m}^3$, respectively.

The indoor air sample collected from the basement contained very low concentrations of both PCE and TCE at 5.46 $\mu\text{g/m}^3$ and 0.88 $\mu\text{g/m}^3$, respectively which are well below the small commercial vapor action levels (VALs) of 180 $\mu\text{g/m}^3$ and 8.8 $\mu\text{g/m}^3$, respectively for these compounds. The indoor air sample collected from the first floor contained only PCE at a low concentration of 6.11 $\mu\text{g/m}^3$.

Unless specifically requested by the WDNR, we are not planning to further sample for vapor in the Pebble House due to the historically low concentrations of chlorinated volatile organic compounds detected in sub-slab and indoor air samples.

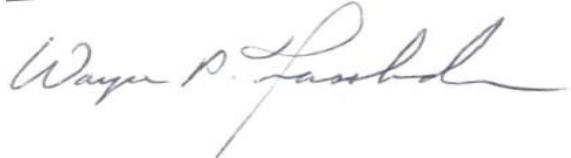

We are planning to sample the groundwater monitoring wells again in April or May of this year.

If you have any questions or would like to discuss these results, please contact me at 262-490-6472 or by email at wfassbender@enviroforensics.com. The WDNR project manager, John

Feeney, can be reached at 262-416-8643. We greatly appreciate your help and patience with this matter.

Sincerely,

Vapor Action and Risk Screening Levels are calculated according to WDNR Publication RR-800 and subsequent vapor intrusion guidance documents

Results reported in micrograms per cubic meter ($\mu\text{g}/\text{m}^3$)

"J" flag indicates concentration above method detection limit but below reporting limit

"D" flag indicates that a dilution was required to report within calibration limits

"U" flag indicates analyte not detected. Limit of detection adjusted for either dilution or concentration of sample.

NE = Screening/action level not established

NR = Not Remediated

NA = Not Analyzed

Bolded values are above detection limits

Bolded and shaded values exceed the applicable screening or action level

Code **Comment**

1 Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

**Subject: Environmental Investigation Sampling Results
BRRTS#: 02-46-548092**

Dear Mr. Uselding:

In accordance with Wisconsin Department of Natural Resources (WDNR) regulation NR 716.14, EnviroForensics, LLC (EnviroForensics) is providing the results of vapor samples collected from your commercial property located at 105-107 North Franklin Street in Port Washington, Wisconsin on September 25-26, 2019. Vapor samples were also collected from the second floor residential properties identified as 103 and 109 North Franklin Street. The sampling activities are part of an environmental investigation being performed for the Harborview Cleaners facility located at 134 East Grand Avenue in Port Washington, Wisconsin at the direction of the WDNR. The chemicals of concern for the investigation are the dry cleaning solvent tetrachloroethene (PCE) and its associated breakdown products.

One (1) sub-slab vapor sample was collected from each of the basements at 105 and 107 North Franklin Street and one (1) indoor air sample was collected from each of the associated first floor commercial spaces at these locations. In addition, one (1) indoor air sample was collected from each of the residential units on the second floor identified as 103 and 109 N. Franklin Street. One (1) outdoor air sample was also collected for quality control purposes. The sample locations are shown on the attached figure. The results of the samples are summarized and compared to WDNR standards in the attached **Table 1**. An excerpt of the Synergy Laboratory report that relates to the sub-slab vapor samples is also attached along with an excerpt of the Beacon passive indoor air sampling results.

Sampling Results

As presented in **Table 1**, the concentrations of both PCE and trichloroethene (TCE) have increased in sub-slab sample 6348-105-SS-1 and the concentration of PCE has increased in sample 6348-105-SS-2. Although these concentrations are below the small commercial vapor risk screening levels (VRSLs), the sample at SS-1 contained a PCE concentration which exceeds the residential VRSL.

Higher PCE concentrations were detected within the indoor air of all basement, first floor, and second floor spaces with the exception of the first floor commercial space at 107 N. Franklin Street. The concentrations of PCE and TCE detected within indoor air are all below the small commercial vapor action levels (VALs) since these exposure levels are based on an 8-hour per day occupancy duration. However, the concentration of PCE in sample 6348-103-IA is above the residential VAL and the concentration of PCE in sample 6348-109-IA is very close to the residential VAL. These samples were both collected within the second floor residential apartments. The residential VAL is lower because it is calculated based on a 24-hour per day exposure duration.

To eliminate the exposure risk to the residents within the second floor apartments, the existing sub-slab depressurization system (SSDS) needs to be turned on for continuous operation. During our sampling, we noticed that a large void had opened in the dirt floor surrounding the existing SSDS extraction point located in the basement of 105 N. Franklin Street. That will need to be repaired and the source of damage identified. We will schedule a time to inspect the source of damage, initiate repairs, and turn on the SSDS in the near future.

If you have any questions or would like us to discuss these results with you, please contact Scott Powell at 317-608-2706 or at rspowell@enviroforensics.com. The WDNR project manager, John Feeney, can be reached at 262-416-8643. We greatly appreciate your help and patience with this matter.

Sincerely,
EnviroForensics, LLC

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code **Comment**

- | | |
|---|---|
| 1 | Laboratory QC within limits. |
| 5 | The QC blank not within established limits. |

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

**Subject: Environmental Investigation Sampling Results
BRRTS#: 02-46-548092**

Dear Ms. Bahr:

EnviroForensics, LLC (EnviroForensics) is providing the results of environmental groundwater samples and sub-slab vapor samples collected from your property located at 134 East Grand Avenue, Port Washington, Wisconsin. The samples were collected between the dates of January 8-10, 2024. The chemicals of concern for the investigation are the dry cleaning solvent tetrachloroethene (PCE) and its associated breakdown products. In addition, groundwater samples were collected from one (1) monitoring well to test for the presence of per-poly fluorinated alkyl substances (PFAS).

Sampling Results

Groundwater samples were collected from wells MW-1, MW-2, and MW-3 at the locations shown on attached **Figure 1**. The samples were sent to a Wisconsin Certified Analytical Laboratory and analyzed for total volatile organic compounds (VOCs). The groundwater analytical results are summarized in **Table 1**, and an excerpt of the Synergy Laboratory report that relates to the groundwater samples is also attached.

The sample from well MW-1 did not contain any chlorinated compounds of concern in concentrations above the laboratory detection limits. PCE was detected in the groundwater sample collected from MW-3 at a concentration of 6.9 micrograms per liter ($\mu\text{g}/\text{L}$) which is just above the groundwater enforcement standard (ES) of $5 \mu\text{g}/\text{L}$. PCE was also detected in the sample from MW-2 at a concentration of 2.69 $\mu\text{g}/\text{L}$ which is just above the preventative action limit (PAL) of $0.5 \mu\text{g}/\text{L}$. No other chlorinated compounds of concern were detected in any of the groundwater samples collected.

A sample of groundwater was collected from MW-3 and analyzed for PFAS compounds. As can be seen in **Table 2** and the attached Pace laboratory analytical report, several PFAS compounds were detected in this sample and a duplicate sample that was collected. Currently, there are no standards promulgated for PFAS compounds in groundwater. However, the Wisconsin Department of Health has recommended enforcement standards for six (6) PFAS compounds of 20 parts per trillion (ppt) and PAL of 2 ppt. These proposed standards are either for the individual compound or any combination of the six compounds. The sample from MW-3 contained two of the six proposed regulated compounds at concentrations exceeding the proposed ES. PFOA was detected at a maximum concentration of 48.9 ppt and PFOS at a maximum

concentration of 28.4 ppt. The concentrations of each of these compounds exceed the proposed ES of 20 ppt.

Two (2) sub-slab vapor samples labeled V-1R and V-2R, coinciding with V-1 and V-2 shown on attached **Figure 1**, were collected from below the building foundation slab.

As can be seen in attached **Table 3** and the attached Synergy Laboratory vapor analytical report, PCE and trichloroethene (TCE) were detected in both of the sub-slab samples. The concentration of PCE in sample V-2R of 14,900 µg/m³ exceeds the vapor risk screening level (VRSL) for small commercial buildings of 5,800 ug/m³. Although the PCE concentration in sample V-1R did not exceed the VRSL, both samples contained PCE at increased concentrations as compared to the last sampling event in December of 2022. The concentrations of TCE detected in both samples were well below either the small commercial or residential VRSL.

We are planning to sample the groundwater monitoring wells again in April or May of this year and the WDNR may require additional wells to be sampled for PFAS compounds. Because there has been rebound in the concentrations of PCE in sub-slab vapor, we recommend that the existing soil vapor extraction (SVE) system be operated intermittently for a period of time (likely 3 months on and 3 months off) to further remediate contaminated soil located beneath the building foundation.

If you have any questions or would like to discuss these results, please contact Scott Powell at 317-608-2706 or by email at rspowell@enviroforensics.com. The WDNR project manager, John Feeney, can be reached at 262-416-8643.

Sincerely,
Environmental Forensic Investigations, Inc.

Bolded values are above detection limits

* Proposed groundwater standard applies to individual compound or combined PFOA and PFOS

J = Analyte concentration detected between the laboratory level of detection and the level of quantification

NA = Not Analyzed

NR = Not reported due to failure of laboratory QC

NE = Not Established

Notes:

** = Vapor mitigation system shut down three weeks prior to sample collection

Vapor Action and Risk Screening Levels are calculated according to WDNR Publication RR-800 and subsequent vapor intrusion guidance documents

Results reported in micrograms per cubic meter ($\mu\text{g}/\text{m}^3$)

"I" flag indicates concentration above method detection limit but below reporting limit

"D" flag indicates that a dilution was required to report within calibration limits

"U" flag indicates analyte not detected. Limit of detection adjusted for either dilution or concentration of sample.

NE = Screening/action level not established

NR = Not Remediated

NA = Not Analyzed

Bolded values are above detection limits

Bolded and shaded values exceed the applicable screening or action level

RE: Project: 6348 HARBORVIEW CLEANERS
Pace Project No.: 20303823

Dear Nicollette Morris:

Enclosed are the analytical results for sample(s) received by the laboratory on January 12, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Baton Rouge

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Juanita Polanco

QUALIFIERS

Project: 6348 HARBORVIEW CLEANERS

Pace Project No.: 20303823

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The Nelac Institute

SAMPLE QUALIFIERS

Sample: 20303823003

[1] For method EPA 537 Mod, the sample was extracted at a reduced volume based on observation of potential matrix interference. As a result, reporting limits are elevated.

ANALYTE QUALIFIERS

IS The internal standard response is below criteria. Results may be biased high.

N2 The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
