Subject: Soil Placement Approval Request, Former Lakefield Sand and Gravel Property, 7003 West Good Hope Road, Milwaukee, Wisconsin WDNR BRRTs Activity # 02-41-548828, FID # 241377070

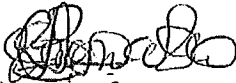

Dear Mr. Gehringer:

The Remediation & Redevelopment Program, Southeast Region, Milwaukee Service Center has completed the review of the subject report dated July 26, 2013 submitted by your consultant SIGMA. The Department hereby grants approval to the report that approximately 12, 000 cubic yards of soils being excavated from 1887 N. Water Street Property Location in Milwaukee can be disposed at the Former Lakefield Sand & Gravel Site, Milwaukee.

The exception to this approval is that soils from SGP 8 (8-10 feet) at the 1887 N. Water Street Property with reported concentrations of Mercury exceeding the threshold concentration of 0.57 mg/Kg cannot be disposed at the Former Lakefield Sand & Gravel Site because these soils will increase the average mercury concentration at the site. Please, be reminded of following required procedures when transporting low hazardous material from one site to another.

If you have any questions concerning this approval, contact me at 414-263-8607.

Sincerely,

Binyoti F. Amungwafor
