Re: Data Transmittal

Clare Central Apartments
1003 and 1033 West Atkinson Avenue
Milwaukee, Wisconsin
Terracon Project No. 58107058A
WDNR BRRTS #02-41-549867
VPLE BRRTS #06-41-560680

Dear Mr. Volkert:

Terracon Consultants, Inc. (Terracon) prepared this data transmittal on behalf of St. Clare Management (St. Clare) to summarize the supplementary site investigation work performed to date at the Clare Central apartment complexes located at 1003 and 1033 Atkinson Avenue, Milwaukee, Wisconsin (site). Supplementary site investigation work was generally completed as proposed in our *Supplementary Site Investigation Work Plan* dated January 11, 2016, and Terracon's *Supplementary Site Investigation Work Plan-Revised* dated March 30, 2016.

A Sub-Slab Depressurization System (SSDS) installation report, Site Diagram, and analytical tables are included in this data transmittal. SSDS, soil/groundwater installation/sampling activities which were presented in the Supplemental Site Investigation Work Plan are completed. The following sections present a brief status of work performed.

Sub-Slab Depressurization System Modifications

On June 30 and July 7, 2016, Acura Services installed SSDSs in the 1003 and 1033 storage sheds, to supplement the existing SSDSs in each complex. According to Acura, the sub-slab communication testing showed a good zone of influence. Acura's July 7, 2016 report is attached.

Direct-Push Supplemental Soil Investigation

On June 23, 2016, Terracon supervised the installation of soil borings P-28 and P-29 at 3614 North 11th Street, soil boring P-30 and groundwater monitoring well MW-11 on the 3604 North 11th Street property, soil borings P-31 and P-32 in the alley, and eight (8) soil borings (P-33 through P-40) on-site along West Atkinson Avenue. The locations are presented on the attached Site Diagram. A review of the analytical results indicate soil to groundwater residual contaminant level (RCL) exceedances in several

Data Transmittal

Clare Central Apartments ■ Milwaukee, Wisconsin

September 21, 2016 ■ Terracon Project No. 58107058A

borings along Atkinson Avenue. Trichloroethane (TCE) was detected at concentrations above its soil to groundwater RCL in borings P-33, 34, 35, 36, 39, and 40; however, the detected concentrations are below the non-industrial, direct-contact RCL. The soil analytical results are below RCLs, and/or method detection limits in borings P-37 & P-38 (along Atkinson Avenue), P-31 & P-32 (in the alley), P-28 & P-29 (3614 North 11th Street property) and P-30 & MW-11 (3604 North 11th Street property). The soil analytical results are summarized on Table 1.

Groundwater Monitoring Well Installation, Development, and Sampling

On June 23, 2016, Terracon supervised the installation of groundwater monitoring well MW-11 in the backyard of the 3604 North 11th Street property. Groundwater monitoring wells MW-10 and MW-11 were subsequently sampled, and the groundwater results from MW-10 (3618 North 11th Street property) indicate a Wisconsin Administrative Code, Chapter NR 140 Preventive Action Limit (PAL) exceedance for TCE, though the result was well below the NR 140 enforcement standard (ES). Groundwater from groundwater monitoring well MW-11 did not contain volatile organic compounds (VOCs) at concentrations above the method detection limits.

Ambient Air Testing

Terracons certified letter to the owner of the 3618 North 11th Street residence was returned; therefore, per our September 13, 2016 discussion, Terracon performed the ambient air sampling in the Clare Central complexes from September 14-15, 2016. Terracon will submit a data transmittal to the Department after the ambient results are tabulated.

We believe the site investigation work is complete, and are requesting Department concurrence prior to the completion of the Supplemental Site Investigation report. Please contact us with questions/comments you may have.

Sincerely,

Timothy P. Welch, P.G.

Environmental Department Manager

Post Mitigation Report For Two Mitigation Systems

Project: Clare Central, 1003 & 1033 W. Atkinson Ave., Milwaukee, WI

Project Summary

Based on the meeting held on site in Milwaukee, May 25, 2016, and subsequent recommendations a system was installed in the attached storage shed at 1003 W. Atkinson June 30, 2016 and a system was installed in the attached storage shed at 1033 W. Atkinson July 7, 2016.

These systems were proposed and installed to supplement two existing systems operating on the opposite side of each building.

Communication testing was performed before installing the systems to be sure that good connectivity existed between the attached shed and Apartment 1 in each building.

Depressurization readings were taken following startup of each system.

Very good depressurization was found after start up indicating that when both systems are running in each building soil vapor that might enter living areas from beneath the floor is being captured and routed outside through system piping.

Project/ Installation Description

1003 W. Atkinson Ave., Milwaukee, WI

On June 30, 2016 a soil vapor mitigation system was installed outside apartment 1 in an attached storage shed at 1003 W. Atkinson, Ave. Communication testing was done to establish that the attached storage shed would be a good location for a mitigation system. Once connectivity was established between the storage shed and Apartment 1 opening a hole through the concrete floor began.

Vapor Intrusion Mitigation Services

Anthony G. Hendricks P.E.

A section of concrete was broken out and removed. Gravel was found beneath the slab.

Approximately a bucket and one half of gravel was removed to facilitate the collection of soil vapor at that point. A flat sump lid was then sealed to the concrete and a transition hub installed in the lid. Three inch schedule 40 PVC was installed to above shelf height. The fan was installed on the top of that riser pipe. The discharge piping was then run through the roof of the storage shed for final discharge.

Discharge piping was routed to over 2 feet above the top of a nearby window before being angled out at 45 degrees with 2 feet more of pipe for final discharge. This was done based on standards developed by EPA to reduce the possibility of entrainment of the gas back into the building.

A manometer was installed on the riser pipe below the fan to indicate operation. The manometer read 1.2 inches of WC following startup. An information label was placed on the riser pipe with installers name, phone, date of installation, certification number and estimate of annual power cost.

Following startup depressurization readings were taken again and found in sample pt. 1 at approximately 30 feet from the pickup point to minus -0.012 inches of WC. At sample pt. 2 at about 18 feet from the pickup point the reading was minus -0.011 inches of WC.

Before startup of the mitigation system the depressurization readings in both sample points bounced around from 0.000 to minus -0.004.

1033 W. Atkinson Ave., Milwaukee

On July 7, 2016 a soil vapor mitigation system was installed in an attached storage shed outside apartment 1 at 1033 W. Atkinson, Ave. Communication testing was done to establish that the attached storage shed would be a good location for a mitigation system. Once connectivity was established between the storage shed and Apartment 1 opening a hole through the concrete floor wads opened.

A section of concrete was broken out and removed. Gravel was found beneath the slab.

Approximately a bucket of gravel was removed to facilitate the collection of soil vapor at that point. A flat sump lid was then sealed to the concrete and a transition hub installed in the lid. Three inch schedule 40 PVC was installed to above shelf height. The fan was installed on the top of that riser pipe. The discharge piping was then run through the roof of the storage shed for final discharge.

A manometer was installed on the riser pipe below the fan to indicate operation. The manometer read 1.1 inches of WC following startup. An information label was placed on the riser pipe with installers name, phone, date of installation, certification number and estimate of annual power cost.

Vapor Intrusion Mitigation Services

Anthony G. Hendricks P.E.

Discharge piping was routed to over 2 feet above the top of a nearby window before being angled out at 45 degrees with 2 feet more of pipe for final discharge. This was done based on standards developed by EPA to reduce the possibility of entrainment of the gas back into the building.

Following startup depressurization readings were taken again and found in sample pt.1 at approximately 30 feet from the pickup point to minus -0.012 inches of WC.

Before startup of the mitigation system the depressurization readings in the sample point bounced around from 0.000 to minus -0.006.

Fan Installed

Each system has a RadonAway RP145 fan installed. The RP145; 110 volt, 72 watts max, capable of pulling 2.1 inches of WC.

The fan at 1003 W. Atkinson Ave., Milwaukee, WI was pulling 1.2 inches of WC following startup based on the fan curve that would be approximately 50 cfm.

The fan at 1033 W. Atkinson Ave., Milwaukee, WI was pulling 1.1 inches of WC following startup. Based on the fan curve that would be approximately 55 cfm.

Cuttings Removed/Soil Removed

Gravel removed to develop the pickup points was placed in a barrel on site by Terracon Inc.

Conclusion

The project goal to supplement the existing systems in each building, that by themselves were not adequately depressurizing Apartment 1 in each building, was achieved. Depressurization readings following startup in Apartment 1 in each building demonstrated an effective level of depressurization has now been achieved.

Notes:

" < " Indicates not detected above listed analytical method detection limit (MDL)

Blue, Italic values indicate listed concentration above its respective NR 140, WAC, PAL

Bold, underlined, red values indicates listed concentration above its respective NR 140, WAC, ES

¹NR 140, Wisconsin Administrative Code, Preventive Action Limit (PAL)

²NR 140, Wisconsin Administrative Code, Enforcement Standard (ES)

ug/L = Micrograms per Liter

— = Not analyzed

* = Monitoring well dry
