Subject: Results of Additional Vapor sampling Supplemental to Closure Documentation" on December 8, 2023.

Mr. Cass:

The Wisconsin Department of Natural Resources (DNR) completed the review of the "Results of Additional Vapor sampling Supplemental to Closure Documentation" on December 8, 2023. The results were submitted by your Environmental Consultant, EnviroForensics, LLC (EnviroForensics).

Sub-slab and soil gas sampling to assess the effectiveness of the remedial action was conducted in January of 2023 and July of 2023. The July 2023 sampling event showed trichloroethene (TCE) concentrations higher than historical trends at several sample locations. Conduct additional sampling to assess this increase in TCE concentration.

No additional work related to the sanitary sewer investigation is necessary at this time.
