Wisconsin Department of Natural Resources
Attn: Candace Sykora
890 Spruce. St.
Baldwin, WI 54002

SUBJECT: Norge Village Cleaners site, BRRTS #02-17-552037, PFAS Addendum to Case Closure Submittal.

Dear Ms. Sykora:

Cedar Corporation, on behalf of Denny and Debbi Bodoh, has prepared a perfluoroalkyl and polyfluoroalkyl substances (PFAS) evaluation addendum to the Case Closure submittal for Norge Village Cleaners site (BRRTS #02-17-552037) as requested by the Wisconsin Department of Natural Resources (WDNR) on April 14, 2021 by email.

The Norge Village Cleaners site is located at 821 E. Main Street, Menomonie WI. The property was used as a dry cleaners/laundry mat since the 1960s and continues to be used as such today. In 2008 contamination from a leaking tetrachloroethylene (PERC) UST was discovered. Since its discovery, multiple investigations and remedial actions have been implemented and a case closure letter for the site was issued by the WDNR on February 18, 2021.

An evaluation for PFAS risks can be determined by the historical use of the subject property and the surrounding properties. Based on the historical uses of the property, there has been no PFAS produced, managed, or discarded on site. PFAS containing products (i.e. fire extinguishers) may have been present on site during day to day operations as a dry cleaners. PFAS would not be expected to be present in any significant quantities and would not have been released on site. In addition, there would be no impact to receptors, regional groundwater, or private/public water supplies based on this evaluation of PFAS at the Norge Village Cleaners site.

Please do not hesitate to contact me if there are any other questions or concerns.

Sincerely,

CEDAR CORPORATION
