Milwaukee, WI 53212

RE: Discharge Management Plan for Soil Mixing and Treatment, Remedial Action,
Former Shorewood Queensway Cleaners, 4300 North Oakland Avenue, Shorewood,
Wisconsin, BRRTS # 02-41-552089

Dear Binyoti:

This document is intended to serve as the required Discharge Management Plan for the WPDES permit application process. The described mixing, treatment, and monitoring elements are also intended to provide enough information for the Wisconsin Department of Natural Resources (WDNR) to grant a temporary exemption for injection per the criteria of NR 140.28(5).

Attached are the following completed and signed WDNR forms:

- WPDES Notice of Intent Form
- Additive Review Worksheet

Introduction and Objective

On April 25, 2019, Mr. John Hnat of the WDNR approved the Fehr Graham Revised Remedial Action Plan from April 24, 2019. The Plan presented information on sample locations, current chemistry, soil and concrete quantities, and treatment chemicals proposed at the former Shorewood Queensway Cleaners BRRTS site (Property) located at 4300 North Oakland Avenue in Shorewood, Wisconsin.

The overall goals for remediation at the site will be the NR 140 groundwater standards (ES and PAL). A source removal effort is planned to significantly reduce the soil contaminant mass. Cost-effective elimination of all contamination in soil to levels below the generic WDNR Residual Contaminant Levels (RCLs) will not be possible, regardless of the remediation method, as low levels of tetrachloroethene (PCE) are present off-site beneath Oakland Avenue.

Planned Remedial Excavation, Chemicals, and Processes

The approved plan includes excavation and landfill disposal of an estimated 1,380 tons of direct haul soil, 936 tons of treated soil, and 151 tons of contaminated concrete. Contamination exists primarily beneath the building in the area of prior drycleaning operations. The excavation dimensions are shown in the attached figures.

Some of the soil cannot be directly excavated and landfilled due to elevated concentrations of PCE. To lower the concentrations to allow for landfill disposal as a solid

waste, spray-on addition of Fenton's Reagent will be performed, with mixing of the chemicals and the soil using a conventional backhoe operated by a contractor. The solutions will be mixed on site inside a treatment system trailer and will be pumped onto the soil using hoses and spray nozzles to achieve the correct consistency of soil and treatment chemicals. Water will be provided by tapping a hydrant located on-site, owned by the Village of Shorewood. Permits from the Village of Shorewood will be obtained prior to implementation.

In addition to Fenton's Reagent, which is a mixture of hydrogen peroxide and sulfuric acid, will be BAM™, a 90 percent carbon, 10 percent mineral solid. These substances will be mixed with the contaminated soil in estimated 2 to 4 foot lifts followed by testing for total Volatile Organic Compounds (VOCs), and TCLP VOC's. If the soil passes test criteria identified in the WDNR April 25, 2019 approval letter, the material will be removed and taken to a licensed subtitle D landfill for disposal.

If the soil does not pass, it will be treated with additional chemical and mixed, then retested. Drop boxes will be rented to place the treated soil pending laboratory test results, so further mixing and excavation activities at greater depths can proceed.

Fenton's Reagent is a strong oxidizer, and we will have another company, Orin Technologies of Madison, conducting that operation. Chemicals stored at the site to use in this process will include 50 percent hydrogen peroxide (which will be diluted down to 15 percent for use in the Fenton's mixture), sodium citrate dihydrate, ferrous sulfate, sulfuric acid (93 percent but diluted down), phosphoric acid (85 percent but diluted down) and a proprietary solid mixture called BAM™, consisting of 90 percent carbon and 10 percent minerals. The liquid chemicals will be secured inside a locked building or trailer, and the entire parcel perimeter will be secured from visitor traffic with a 6 to 8 foot high chain link fence or equivalent.

A total of 2,500 gallons of 25 percent Fenton's Reagent and 76 cubic yards of BAM™, a solid, is planned for use.

Post-Excavation Chemical Addition and Backfill

Upon completion of the excavation, the following will be completed:

- Placement of 12 cubic yards of BAM™ within soil from the bottom foot of the deepest part of the excavation, with material placement preferentially directed to contact soil at the north wall of the excavation adjacent to the neighboring building. The BAM™ will be briefly incorporated into the base soils using the backhoe bucket to facilitate contact with the soil, then tamped into place.
- Backfill the excavation to 1 foot below grade using imported bank run sand and gravel compacted in 1 foot lifts. The base of the excavation will receive a minimum of 1 foot of 3-inch clear stone.
- Traffic bond, or other compactible granular material with significant fines, will be placed on the 4300 N. Oakland Street property. The surficial material will be thoroughly compacted and crowned to limit infiltration of precipitation and direct surficial drainage to the adjacent remaining asphalt surfaces. This material should contain abundant fines and granular material that sets up hard to minimize

infiltration of precipitation. Compaction will be required in two 6-inch lifts to ensure proper density to limit infiltration.

- The surficial 6 inches of all site disturbed areas on the 1808 E. Marion Street parcel will be backfilled with soil. A vegetative cover, likely grass, will be planted with the specific blend as specified by the Village of Shorewood.
- Restoration of monitoring wells MW-3 and MW-5 with wells MW-3R and MW-5R in the excavation backfill. Well screened intervals will extend from approximately 3 to 13 feet below grade at each location.
- Installation of two piezometers (PZ-10 and PZ-11) with screened intervals from 25 to 30 feet below grade at locations adjacent to wells MW-3R and MW-5R.
- Except for the excavation proposed on the 4312 parcel to the north, no resurfacing with concrete or asphalt will be performed. The 4312 property to the north will be restored to current conditions, with installation of concrete and asphalt.

Utilities

Utilities are shown on the attached maps and include storm sewer, sanitary sewer, and water line. Removal of all private underground utilities is planned within the excavation footprint areas to facilitate the dig and mixing operations. Because there is no pressure injection at this site, and merely spray on chemical addition, no migration of sprayed-on chemicals is expected to take place.

Wisconsin Electric Power Company (WEPCO) has been contacted regarding the electric pole on the northeast corner of the Shorewood Cleaners property. The pole has electric and utility lines and a private light mounted on it. WEPCO is preparing a plan for relocation of the power poles to the eastern property boundary.

Further discussions with the utility will clarify specifics.

Proposed Monitoring During Injection

Since added liquid chemicals are not being pressure injected and surface sprayed, and the BAM™ is a solid and all soil containing chemicals will be excavated and removed shortly after addition, only minimal monitoring for potential off-site chemical contaminant migration is planned or necessary. Monitoring wells MW-3 and MW-5, in the heart of the excavation and treatment area, will be removed during the remediation and restored upon completion of backfilling. All other monitoring wells will remain in place that are proposed for monitoring.

Pre-excavation monitoring of water level, dissolved oxygen, pH, conductivity, and oxidation/reduction potential will be recorded from wells MW-1, MW-2, MW-4, MW-6, MW-7, MW-8, and MW-9, which is located in the basement of the adjacent building (Figure 1). Gasses in the headspace of these wells will also be monitored with a four gas meter for percent oxygen, percent carbon dioxide, hydrogen sulfide, and percent of the lower explosive limit (LEL), and for volatile organic content, using a photoionization detector.

Existing subslab vapor points within the basement, and the exhaust gas from the operating subslab vapor mitigation system, will be monitored for the same parameters to assess potential vapor mobilization during the soil mixing process.

During days when chemical additions occur in the excavation, measurements of these parameters will be performed twice per day, once before or as mixing is occurring, and once after in-ground chemical addition and mixing has concluded.

Post-Injection Monitoring

After the mixing and final removal/excavation of the soil from the ground has been completed, the following injection-permit related field activities will be completed:

- Approximately 24 hours following final removal of mixed soil, the wells and basement test locations referenced above within the adjacent building will be monitored for gasses only (field VOCs, CO₂, LEL, H₂S, O₂), using the four gas meter from the well headspace. If changes in water chemistry values from nearby monitoring wells changed by more than 25 percent during previous monitoring during the mixing process, measurement of the in-well water chemistry parameters will also be performed.

Upon completion of the field work and receipt of final laboratory analytical results, a Remedial Action Documentation Report will be prepared. The Report will include a summary of the field measurements retained during the mixing phase of the project.

I trust these documents meet your needs, and you have enough information to issue the permit. If you need additional information, please call and let me know. We hope to begin the remedial action in the summer of 2019 and look forward to hearing from you shortly.

Sincerely,

Dillon Plamann
Environmental Technician

Notice of Intent (NOI)
Contaminated Groundwater from Remedial Action Operations
WPDES Permit No. WI-0046566-07-0
Rev. 06/2018

Notice: Pursuant to chs. NR 200 and 205, Wis. Adm. Code, this notice of intent (NOI) is required to request coverage under the Wisconsin Pollutant Discharge Elimination System (WPDES) Permit No. WI-0046566-07-0 for discharges of contaminated groundwater to waters of the state of Wisconsin. Failure to complete this form in its entirety may result in a returned NOI or a denied NOI. Personal information collected will be used for administrative purposes and may be provided to requestors to the extent required by Wisconsin Open Records law [ss. 19.31-19.39, Wis. Stats.].

SECTION I: FACILITY/PROJECT LOCATION INFORMATION

SECTION V: ELIGIBILITY CHECKLIST

1. Is the wastewater discharged from and/or to properties within tribal lands (i.e. land owned by or held in trust for the tribes and land within recognized reservation boundaries)?

Yes. **Your discharge is not eligible for this General Permit.** If all discharges from your facility go to or come from properties in tribal lands, you do not require regulation under a WPDES discharge permit. Therefore, skip the

rest of the NOI and sign the last page. We will remove you from our tracking system. The Tribe or United States Environmental Protection Agency (EPA) regulates discharges within tribal lands.

x No. Proceed to question 2.

2. Is the wastewater discharged to a Publicly Owned Treatment Works (i.e. sanitary sewer)? A septic system is not considered a sanitary sewer.

Yes. **Your discharge is not eligible for this General Permit.** *If all discharges from your facility go to a sanitary sewer, you do not require regulation under a WPDES discharge permit. Therefore, skip the rest of the NOI and sign the last page. We will remove you from our tracking system. If at some point in the future operations at your facility result in a discharge, you will need to inform the Department. If only some or no discharges from your facility go to the sanitary sewer, please proceed to question 3.*

x No. Proceed to question 3.

3. Are any of the following wastewaters discharged or mixed with the above wastewaters to surface water or groundwater: Contact or noncontact cooling water, water from boiler cleaning operations, air compressor condensate contaminated with oil and grease, softener regeneration backwash, municipal wastewater, domestic wastewater, or process wastewaters from the production of any material or product, or other wastewater not otherwise cover by this general permit?

Yes. **Your discharge is not eligible for this General Permit.** *Skip the rest of the NOI and complete the certification on last page. Contact the Department to obtain application for an individual WPDES discharge permit.*

x No. Proceed to question 4.

4. What is the receiving water for your discharge? If your facility has more than one outfall, indicate in the space provided which outfalls go to groundwater and which go to surface waters. (*check all that apply*)

x Groundwater Discharge (*any wastewater that is allowed to infiltrate or seep into the soil from a permeable surface including but not limited to any drain field, agricultural field, ditch, swale, depression, trench or pit, adsorption pond, infiltration pond, rain garden, prairie, or vegetative area that may impact groundwater quality*). **If you will only be discharging to groundwater, please proceed to question 5.**

Outfall #(s):

Wetland Discharge (*any discernible, confined and discrete conveyance system including but not limited to any pipe, ditch, channel, tunnel, conduit, swale, or storm sewer that will carry wastewater to a wetland. Wetlands mean an area where water is at, near or above the land surface long enough to be capable of supporting aquatic or hydrophytic vegetation and which has soils indicative of wet conditions*). **If you will only be discharging to wetlands, please proceed to question 5.**

Outfall #(s):

Note: *The Department will need to determine if your discharge would cause significant adverse impacts to wetlands*

Surface Water Discharge (*any discernible, confined and discrete conveyance system including but not limited to any pipe, ditch, channel, tunnel, conduit, swale, or storm sewer that will carry wastewater to a creek, stream, pond, marsh, bay, reservoir, river, lake, or other surface water within the state of Wisconsin*). **Proceed to question 4A.**

Outfall #(s):

A. What is the name(s) of the surface water your discharge enters?

Proceed to question 4B.

B. What is the Water Body Identification Code (WBIC) of the surface water your discharge enters?

Proceed to question 4C.

Note: The WBIC for a specific surface water can be found at: <http://dnr.wi.gov/water/waterSearch.aspx>.

C. Is the discharge directly to a surface water classified as an outstanding or exceptional resource waters as defined in ch. NR 102, Wis. Adm. Code.?

Yes. **Your discharge is not eligible for this General Permit.** Skip the rest of the NOI and complete the certification on last page. Contact the Department to obtain application for an individual WPDES discharge permit.

No. **Proceed to question 4D.**

D. Is the discharge directly to a surface water classified as a public water supply (i.e. Lake Superior, Lake Michigan and Lake Winnebago) in ch. NR 104, Wis. Adm. Code?

Yes. **Your discharge is not eligible for this General Permit.** Skip the rest of the NOI and complete the certification on last page. Contact the Department to obtain application for an individual WPDES discharge permit.

No. **Proceed to question 5.**

5. Does the discharge contain water treatment additives (i.e. biocides such as microbicides, fungicides, molluscicides, chlorine, etc.) or water quality conditioners (i.e. scale and corrosion inhibitors, pH adjustment chemicals, oxygen scavengers, conditioning agents, water softening compounds, etc.) that may enter surface water or groundwater without receiving wastewater treatment or that are used in a treatment process but are not expected to be removed by wastewater treatment?

X Yes. **For each additive used, please fill out and attach an Additive Review Worksheet.** Additive Review Worksheets must be completed to receive coverage under this general permit. The Additive Review Worksheet is not required for additives with active ingredients consisting of chlorine, hypochlorite, sulfuric acid, hydrochloric acid or sodium hydroxide. Also, chemicals used in an industrial process generating wastewater that eventually receives treatment or chemicals added as part of wastewater treatment process (such as ferric chloride, alum or pickle liquor) are not considered water treatment additives and need not require an additive review. **Proceed to question 6.**

No. **Proceed to question 6.**

6. Will chlorine-based compounds be used to control the growth of micro-organisms in the treatment system or used to decontaminate the treatment system after completion of the remediation project?

Yes. **Proceed to question 6A.**

X No. **Proceed to question 7.**

A. Will chemicals be used to dechlorinate the wastewater prior to discharge to surface water?

Yes. **The wastewater will be dechlorinated with chemicals. Proceed to question 7.**

Notice of Intent (NOI)
Contaminated Groundwater from Remedial
Action Operations
WPDES Permit No. WI-0046566-07-0
Rev. 06/2018

No. The wastewater will not be dechlorinated with chemicals. Proceed to question 7.

7. Is a discharge management plan attached to this NOI that includes all the information necessary from Section 3 of the permit?

X Yes. Proceed to question 8.

No. This form will be considered incomplete and returned to you.

8. Has the groundwater at the site been analyzed for contaminants and are the results attach to the discharge management plan?

X Yes. Proceed to question 9.

No. This form will be considered incomplete and returned to you.

9. If a treatment facility is required for the treatment of contaminated groundwater, have the plans and specifications been submitted to or approved by the department under s. 281.41, Wis. Stats., and ch. NR 108, Wis. Adm. Code?

Yes. Proceed to Section VI. NOT APPLICABLE

No. Please contact wastewater plan review staff to find out how to get the plans approved. Proceed to Section VI.

Note: Department wastewater plan review staff can be found here:

<http://dnr.wi.gov/topic/wastewater/planreviewers.html>.

Additionally, department plan submittal requirements can be found here:

<http://dnr.wi.gov/topic/wastewater/AdequateSubmittal.html>.

SECTION VI: CERTIFICATION

This form must be signed by a responsible executive or municipal officer, manager, partner or proprietor as specified in s. 283.37(3), Wis. Stats., or a duly authorized representative of the officer, manager, partner or proprietor that has been delegated signature authority pursuant to s. NR 205.07(1)(g)2., Wis. Adm. Code. To delegate signatory authority to a duly authorized representative, please submit a Delegation of Signature Authority (DSA) form (Form 3400-220).

I certify under penalty of law that these documents and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Please print and sign this certification page. Scan and email the completed form, certification page and any other supporting information to the department regional general permit reviewer at least thirty (30) business days before the expected start date of discharge. A listing of the general permit reviewers for each region with mailing addresses and phone numbers can be found at <http://dnr.wi.gov/topic/wastewater/GeneralPermits.html>. Please scroll to the "How to Apply" section and click the department region that the discharge is located in.

Additive Review Worksheet

This worksheet summarizes the information to be submitted to the WDNR for review of additives. This information is required because additives are approved on a case-by-case basis.

The fields highlighted in orange are required for all additive reviews and are NOT typically found on a safety data sheet (SDS).

The fields highlighted in blue are required for all additive reviews and are typically found on a SDS.

Parts D and E need to be completed **for each species** (e.g. Daphnia -water flea); Pimephales (fathead minnow), etc) for which a toxicity test is conducted.

The fields highlighted in green are NOT typically found on a SDS and are required for toxicity tests conducted when “Other” is selected for Test Method in Part D-1.

If all of the needed information is not provided on the SDS, It is recommended that you contact the chemical distributor and/or manufacturer to obtain the required information. You do not need to conduct the toxicity test if the toxicity information is available on SDS or from the supplier/manufacturer. If the required toxicity data is not provided to the Department, the additive product may not be approved for use.

Note: Toxicity test results must address the ***commercial product formulation***. The commercial product formulation is all active ingredients and any and all carriers, buffering agents, binding agents, and additional materials – the entire product as used. Information related to active ingredient alone is not sufficient.

For more information on the additive review process, see the “[Water Quality Review Procedures for Additives](#)” guidance document.

SAFETY DATA SHEET

HYDROGEN PEROXIDE 50% STANDARD GRADE

Product ID: MI081300

Revised: 01-31-2014

Replaces: 01-27-2014

1. IDENTIFICATION

Product Name: HYDROGEN PEROXIDE 50% STANDARD GRADE
Synonyms: Peroxide; Hydrogen Dioxide
CAS Number: MIXTURE
Recommended Use: No data available.
Restrictions on Use: No data available.

Hydrite Chemical Co.
300 N. Patrick Blvd.
Brookfield, WI 53008-0948
(262) 792-1450

EMERGENCY RESPONSE NUMBERS:
24 Hour Emergency #: (414) 277-1311
CHEMTREC Emergency #: (800) 424-9300

2. HAZARD(S) IDENTIFICATION

Signal Word: Danger
GHS Classification: Skin Corrosion/Irritation Category 1B
Serious Eye Damage/Eye Irritation Category 1
Oxidizing Liquid Category 2
Acute Toxicity - Inhalation Vapour Category 3
Specific Target Organ Systemic Toxicity (STOT) - Single Exposure Category 3
Acute Toxicity - Inhalation Dust / Mist Category 4
Acute Toxicity - Oral Category 4
Hazard Statements: May intensify fire; oxidizer.
Harmful if swallowed or if inhaled.
Causes severe skin burns and eye damage.
Toxic if inhaled.
May cause respiratory irritation.
May cause drowsiness or dizziness.

Precautionary Statements:

Prevention: Keep away from heat, sparks, open flames and hot surfaces. – No smoking.
Keep away from clothing and other combustible materials.
Take any precaution to avoid mixing with combustibles.
Do not breathe dust, fume, gas, mist, vapours or spray.
Wash thoroughly after handling.
Do not eat, drink or smoke when using this product.
Use only outdoors or in a well-ventilated area.
Wear gloves, eye and face protection and protective clothing.

Response: IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.
IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water.

HYDROGEN PEROXIDE 50% STANDARD GRADE

Product ID: MI081300

IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing.
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
Immediately call a POISON CENTER or doctor/physician.
Specific treatment (see First Aid on SDS or on this label).
Wash contaminated clothing before reuse.
In case of fire: Use appropriate extinguishing media - See Section 5 on SDS.

Storage: Store in a well-ventilated place. Keep container tightly closed.
Store in a secure manner.

Disposal: Dispose of in accordance with local, regional and international regulations.

Hazards Not Otherwise Classified: None known.

3. COMPOSITION/INFORMATION ON INGREDIENTS

| <u>Component</u> | <u>CAS Number</u> | <u>% by Wt.</u> |
|-------------------|-------------------|-----------------|
| Hydrogen Peroxide | 7722-84-1 | ~ 50 % |

4. FIRST-AID MEASURES

Eye Contact: Immediately flush eyes with plenty of water for at least 15 minutes while holding eyelids open. Tilt head to avoid contaminating unaffected eye. Get immediate medical attention.

Skin Contact: Immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Get medical attention immediately. Do not reuse clothing and shoes until cleaned. Wash with soap and water. Discard shoes if contaminated.

Inhalation: Remove to fresh air. If breathing is difficult, administer oxygen. If not breathing, give artificial respiration, preferably mouth-to-mouth. GET MEDICAL ATTENTION IMMEDIATELY. Keep warm and quiet.

Ingestion: If swallowed, call a physician immediately. DO NOT induce vomiting unless directed to do so by a physician. Never give anything by mouth to an unconscious person. If vomiting occurs spontaneously, keep head below hips to prevent aspiration of liquid into the lungs. Rinse mouth with fresh water. Give 1-2 glasses of water to drink. Keep warm and quiet.

Note to Physicians:

Exposure to material may cause delayed lung injury resulting in pulmonary edema and pneumonitis. Exposed individuals should be monitored for 72 hours after exposure for the onset of delayed respiratory symptoms. Hydrogen peroxide is a strong oxidant. Direct contact with the eye is likely to cause corneal damage, especially if not washed immediately. Careful ophthalmologic evaluation is recommended and the possibility of local corticosteroid therapy should be considered. Because of the likelihood of corrosive effects on the gastrointestinal tract after ingestion and the unlikelihood of systemic effects, attempts at evacuating the stomach via emesis induction or gastric lavage should be avoided. There is a remote possibility, however, that a nasogastric or orogastric tube may be required for the reduction of severe distension due to gas formation.

Most Important Symptoms/Effects:

Eye Contact: CORROSIVE-Causes severe irritation and burns. May cause: corneal damage. permanent eye damage. blindness. Effects may be delayed.

Skin Contact: CORROSIVE-Causes severe irritation and burns. Contact with concentrated liquid for a short period of time may cause a temporary whitening or bleaching of the skin.

Skin Absorption: Practically non-toxic if absorbed through the skin.

Inhalation: CORROSIVE-Causes severe irritation and burns. High concentrations of vapor or mist may cause severe irritation of the: nose. throat. respiratory tract. Excessive exposure may cause: pulmonary edema. death. Toxic by inhalation. Effects may be delayed.

HYDROGEN PEROXIDE 50% STANDARD GRADE

Product ID: MI081300

Ingestion: CORROSIVE-Causes severe irritation and burns. Moderately toxic by ingestion. May cause: gastrointestinal irritation, nausea, vomiting, diarrhea, ulcerations, burns, edema (fluid in lungs), death. The rapid releasing of oxygen can cause distension and bleeding of the mucosa in the stomach and lead to severe damage of the intestinal organs, especially in the event of greater intake of the product.

5. FIRE-FIGHTING MEASURES

Extinguishing Media: Water only. Water spray. Water fog. Water (flood with water). DO NOT USE: Organic compounds.

Fire Fighting Methods: Evacuate area of unprotected personnel. Wear protective clothing including NIOSH-approved self-contained breathing apparatus. Remain upwind of fire to avoid hazardous vapors and decomposition products. Use water spray to cool fire-exposed containers. Move containers from fire area if possible without hazard. Run-off from fire control may cause pollution.

Fire and Explosion Hazards: STRONG OXIDIZER. Forms explosive mixtures with combustible, organic, or other easily oxidizable materials. These mixtures are easily ignited by friction or heat. Heated material can form flammable vapors with air. Heated material can form explosive vapors with air. Decomposition will release oxygen, which will intensify a fire. The rate of decomposition may exceed the vent capacity of storage containers and cause an explosion. Solutions above 65% are especially hazardous as they do not contain enough water to remove the heat of decomposition by evaporation.

Hazardous Combustion Products: Oxygen.

6. ACCIDENTAL RELEASE MEASURES

Spill Clean-Up Procedures: CORROSIVE MATERIAL. STRONG OXIDIZER. Eliminate all sources of ignition. Evacuate unprotected personnel from area. Maintain adequate ventilation. Follow personal protective equipment recommendations found in Section 8. Never exceed any occupational exposure limit. Shut off source of leak if safe to do so. Never return spilled product into its original container. Never put spilled material into another container for disposal. Avoid contact with organic or combustible material which may cause fire or violent decomposition. Dilute spill with large amounts of water to a concentration of 5% hydrogen peroxide; hold in a pond or diked area until peroxide is completely decomposed or dispose of according to all local, state and federal regulations. Hydrogen peroxide may be decomposed by adding sodium metabisulfite or sodium sulfite after diluting to 5%. Flush remaining area with water to remove trace residue and dispose of properly. Avoid direct discharge to sewers and surface waters. Notify authorities if entry occurs. Combustible materials exposed to hydrogen peroxide should be immediately submerged in or rinsed with large amounts of water to ensure that all hydrogen peroxide is removed. Residual hydrogen peroxide that is allowed to dry (upon evaporation hydrogen peroxide can concentrate) on organic materials such as paper, fabrics, cotton, leather, wood, or other combustibles, can cause the material to ignite and result in a fire.

7. HANDLING AND STORAGE

Handling: Avoid contact with eyes, skin, and clothing. Use with adequate ventilation. Do not swallow. Avoid breathing vapors, mists, or dust. Do not eat, drink, or smoke in work area. Wash thoroughly after handling. Empty containers retain product residue (vapor, dust, or liquid) and can be dangerous. DO NOT pressurize, cut, weld, braze, solder, drill, grind, or expose such containers to heat, flame, sparks, static electricity, or other source of ignition. They may explode and cause injury or death. Avoid contamination. Never return unused product to container. Contamination may cause decomposition and generation of oxygen gas which could result in high pressure and possibly container rupture. Use non-sparking tools and equipment. Utensils used for handling hydrogen peroxide should only be made of glass, stainless steel, aluminum or plastic.

Storage: CORROSIVE MATERIAL. STRONG OXIDIZER. Store in a cool, well ventilated area away from all sources of ignition and out of direct sunlight. Store in a dry location away from heat. Keep away from incompatible materials. Keep containers tightly closed. Do not store in unlabeled or mislabeled containers. Avoid storage on wood floors or near wooden walls, etc.. Do not store on wooden pallets. Store in a vented container. Do not store near combustible materials. DO NOT contaminate water, food or feed by storage or disposal. Refer

HYDROGEN PEROXIDE 50% STANDARD GRADE

Product ID: MI081300

to the National Fire Protection Association (NFPA) Code for the Storage of Organic Peroxide Formulations. See Section 10 for incompatible materials.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

OSHA Exposure Guidelines:

| Component | Limits |
|-------------------|--------------------------------------|
| Hydrogen Peroxide | 1 ppm TWA; 1.4 mg/m ³ TWA |

ACGIH Exposure Guidelines:

| Component | Limits |
|-------------------|---------------|
| Hydrogen Peroxide | 1 ppm TWA |

Engineering Controls: General room ventilation is required. Local exhaust ventilation, process enclosures or other engineering controls may be needed to maintain airborne levels below recommended exposure limits. Maintain adequate ventilation. Do not use in closed or confined spaces. Avoid creating dust or mist. Keep levels below exposure limits. To determine exposure levels, monitoring should be performed regularly.

Eye/Face Protection: Wear chemical safety goggles and a full face shield while handling this product.

Skin Protection: Prevent contact with this product. Wear gloves and protective clothing depending on condition of use. Protective gloves: Butyl rubber. Neoprene. Polyvinyl chloride. Nitrile. Inspect regularly for leaks. Thoroughly rinse the outside of gloves with water prior to removal. Avoid cotton, wool and leather clothing and shoes.

Respiratory Protection: Respiratory protection must be worn if ventilation does not eliminate symptoms or keep levels below recommended exposure limits. If exposure limits are exceeded, wear: NIOSH-Approved respirator. NIOSH-Approved self-contained breathing apparatus. DO NOT use any form of air-purifying respirator (APR) or filtering facepiece (AKA dust mask), especially those containing oxidizable sorbants such as activated carbon. DO NOT exceed limits established by the respirator manufacturer. All respiratory protection programs must comply with OSHA 29 CFR 1910.134 and ANSI Z88.2 requirements and must be followed whenever workplace conditions require a respirator's use.

Other Protective Equipment: Eye-wash station. Safety shower. Rubber apron. Rubber boots. Impervious clothing. Full body suit. NOTE: As the water content of hydrogen peroxide evaporates, cotton, rayon, and wool fibers are particularly subject to spontaneous combustion. Where there is significant risk of sudden splash or spray, it is advised that an apron or rubber suit be worn. Any contaminated clothing, including gloves, shoes, aprons, coveralls, etc., should be removed immediately and thoroughly flushed with water to eliminate any traces of hydrogen peroxide before cleaning and reuse. Residual hydrogen peroxide, if allowed to dry on material such as paper, fabrics, cotton, leather, wood or other combustibles can cause the material to ignite and result in fire.

General Hygiene Conditions: Wash with soap and water before meal times and at the end of each work shift. Good manufacturing practices require gross amounts of any chemical be removed from skin as soon as practical, especially before eating or smoking. Food, beverages, and tobacco products should not be carried, stored or consumed where this material is in use.

9. PHYSICAL AND CHEMICAL PROPERTIES

Physical State: Liquid.

Color: Clear. Colorless.

Odor: No odor.

Odor Threshold: N.D.

pH: <= 3.00 (as is)

Freezing Point (deg. F): 1.4 - -68.8

Melting Point (deg. F): N.D.

Initial Boiling Point or Boiling Range: 237 °F

Flash Point: N.A.

Flash Point Method: N.A.

Evaporation Rate (nBuAc = 1): > 1

HYDROGEN PEROXIDE 50% STANDARD GRADE

Product ID: MI081300

Flammability (solid, gas): N.D.

Lower Explosion Limit: N.A.

Upper Explosion Limit: N.A.

Vapor Pressure (mm Hg): 18.3 @ 30C

Vapor Density (air=1): N.D.

Specific Gravity or Relative Density: 1.19 @ 20 C

Solubility in Water: Complete

Partition Coefficient (n-octanol/water): N.D.

Autoignition Temperature: N.A.

Decomposition Temperature: N.D.

Viscosity: N.D.

% Volatile (wt%): 100

VOC (wt%): 0

VOC (lbs/gal): 0

Fire Point: N.D.

10. STABILITY AND REACTIVITY

Reactivity: No data available.

Chemical Stability: Stable under normal conditions.

Possibility of Hazardous Reactions: Hazardous polymerization will not occur under normal conditions.

Contact with organic materials may cause fire and explosions. Contact with metals, metallic ions, alkalis, reducing agents and organic matter (such as alcohols or terpenes) may produce self-accelerated thermal decomposition.

Conditions to Avoid: Avoid elevated temperatures. Avoid exposure to light. UV-rays. pH variations. Excessive heat or contamination could cause product to become unstable.

Incompatible Materials: Oxygen. Reducing agents. Alkalies. Combustible materials. Organics. Wood. Dust. Paper. Dirt. Decomposition catalysts. Metals. Metal salts. Metal ions. Copper or copper alloys. Galvanized iron. Metal Oxides. Acids. Salts.

Hazardous Decomposition Products: Oxygen. Material decomposes with the potential to produce a rupture of unvented closed containers. This material decomposes if contaminated, causing fire and possible explosions. Oxygen can be liberated at temperatures above ambient.

11. TOXICOLOGICAL INFORMATION

| Component | Oral LD50 | Dermal LD50 | Inhalation LC50 |
|-------------------|------------------|--------------------|------------------------|
| Hydrogen Peroxide | Rat: 801 mg/kg | Rabbit: 2000 mg/kg | 4H Rat: 2.0 g/m3 |

Acute Toxicity Estimate (ATE):

Oral: 1,602 mg/kg

Dermal: 4,000 mg/kg

Inhalation Vapor: 4.0000 mg/L

Inhalation Dust/Mist: 4.0000 mg/L

Routes of Exposure: Eyes. Skin. Inhalation. Ingestion.

Eye Contact: CORROSIVE-Causes severe irritation and burns. May cause: corneal damage. permanent eye damage. blindness. Effects may be delayed.

Skin Contact: CORROSIVE-Causes severe irritation and burns. Contact with concentrated liquid for a short period of time may cause a temporary whitening or bleaching of the skin.

Skin Absorption: Practically non-toxic if absorbed through the skin.

HYDROGEN PEROXIDE 50% STANDARD GRADE

Product ID: MI081300

Inhalation: CORROSIVE-Causes severe irritation and burns. High concentrations of vapor or mist may cause severe irritation of the: nose. throat. respiratory tract. Excessive exposure may cause: pulmonary edema. death. Toxic by inhalation. Effects may be delayed.

Ingestion: CORROSIVE-Causes severe irritation and burns. Moderately toxic by ingestion. May cause: gastrointestinal irritation. nausea. vomiting. diarrhea. ulcerations. burns. edema (fluid in lungs). death. The rapid releasing of oxygen can cause distension and bleeding of the mucosa in the stomach and lead to severe damage of the intestinal organs, especially in the event of greater intake of the product.

Medical Conditions Aggravated by Exposure to Product: Lung disorders. Eye disorders.

Other: None known.

Cancer Information:

This product does not contain 0.1% or more of the known or potential carcinogens listed in NTP, IARC, or OSHA.

12. ECOLOGICAL INFORMATION

Ecotoxicological Information: Hydrogen Peroxide:

Slightly toxic. Fish 96 h LC50 between 10-37 mg/l

Moderately toxic. Daphnia magna (Water flea) EC50 = 7.7 mg/L

Moderately toxic. Daphnia pulex (Water flea) EC50 = 2.4 mg/L

Slightly toxic. Bacteria EC50 = 30 mg/L

Highly toxic. Algae EC50 = 0.85 mg/L

Chemical Fate Information: Hydrogen peroxide in the aquatic environment is subject to various reduction or oxidation processes and decomposes into water and oxygen. Hydrogen peroxide half-life in freshwater ranged from 8 hours to 20 days, in air from 10-20 hours and in soils from minutes to hours depending upon microbiological activity and metal contaminants.

Material may have some potential to bioaccumulate but will likely degrade in most environments before accumulation can occur.

Will likely be in environment due to its water solubility but will likely degraeade over time.

13. DISPOSAL CONSIDERATIONS

Hazardous Waste Number: D001, D002

Disposal Method: Dispose of in a permitted hazardous waste management facility following all local, state and federal regulations. Chemical additions to, processing of, or otherwise altering this material may make this waste management information incomplete, inaccurate, or otherwise inappropriate. Furthermore, state and local waste disposal requirements may be more restrictive or otherwise different from federal laws and regulations. Since emptied containers retain product residue, follow label warnings even after container is emptied. DO NOT pressurize, cut, weld, solder, drill, grind or expose empty containers to heat, flame, sparks or other sources of ignition. Empty containers should be triple rinsed with water before discarding.

14. TRANSPORT INFORMATION

DOT (Department of Transportation):

Identification Number: UN2014

Proper Shipping Name: HYDROGEN PEROXIDE, AQUEOUS SOLUTION

Hazard Class: 5.1 (8)

Packing Group: II

Label Required: OXIDIZER; CORROSIVE

RE: Project: 17-1124 SHOREWOOD CLEANERS
Pace Project No.: 40163882

Dear Ken Ebbott:

Enclosed are the analytical results for sample(s) received by the laboratory on January 24, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska

QUALIFIERS

Project: 17-1124 SHOREWOOD CLEANERS

Pace Project No.: 40163882

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

ANALYTE QUALIFIERS

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results may be biased high.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

R1 RPD value was outside control limits.
