Hi Jason,

As we discussed this morning, the paired sub-slab/indoor air sampling is intended to be one port paired with indoor air sampling to occur over two separate sampling events. It was inadvertently written two ports paired with indoor air, inferring one event.

We both agree that the intent was two sampling events.

There was a fire which started in the basement within the last two months. I am not sure how this may affect the indoor air sampling. I am copying Alyssa Sellwood for her guidance on this. [Alyssa, should we forego the indoor air on the first event or should we go with it?](#)

**We are committed to service excellence.**

Visit our survey at <http://dnr.wi.gov/customersurvey> to evaluate how I did.
