Subject: Groundwater Monitoring Report – December 2017  
Laundry Land Cleaners (former), Northgate Shopping Center  
1131 N. Sherman Avenue, Madison, Wisconsin  
WDNR BRRTS #02-13-552183

Dear Ms. Koepke:

On behalf of Northgate Partnership, SCS Engineers (SCS) is providing the following Groundwater Monitoring Report for the Laundry Land Cleaners DERF site, located at the Northgate Shopping Center, at 1131 North Sherman Avenue, Madison, Wisconsin. This update letter summarizes recent groundwater sampling activities, which were performed consistent with the Wisconsin Department of Natural Resources (WDNR) Approval of Change Order #6 for Laundryland Cleaners dated October 2, 2017.

Cheese whey was injected into the aquifer beginning in December 2009 to evaluate the effectiveness of the whey to create anaerobic conditions for degradation of tetrachloroethene (PCE). The December 2017 sampling event occurred approximately 2.75 years after the second and final full round of whey injections (completed in April 2015). The December 2017 sampling results from some wells indicate a slight increase in chlorinated volatile organic compound (CVOC) concentrations since the last sampling round in April 2016, but overall concentrations at water table have decreased greatly since 2008 when the first rounds of water quality samples were analyzed. Results from the piezometers indicate decreases in PCE concentrations, and increases in concentrations of the PCE degradation compounds cis-1,2-Dichloroethene (DCE) and vinyl chloride.

Based on the results of the groundwater monitoring, we recommend continued groundwater sampling with no additional whey injections.

### GROUNDWATER SAMPLING

Water levels were measured in all accessible wells on December 19, 2018. Groundwater samples were collected on December 19 and 20, 2017, from 18 groundwater monitoring wells located at the Northgate Shopping Center and surrounding properties and right-of-ways

(**Figure 1**). The samples were submitted for laboratory analysis of volatile organic compounds (VOCs).

The following wells were sampled:

- PZ1, MW2, PZ2, MW3, PZ3, MW4, PZ4, PZ5, MW7, PZ7, MW8R, PZ9, PZ9A, MW11, PZ11, MW13, MW14, and MW15.

The following wells were not sampled:

- MW1 (damaged), MW5 (damaged), MW12 (lost beneath gravel in alleyway).

## GROUNDWATER FLOW

Water level measurements listed on **Table 1** were used to produce the water table and piezometric surface contour maps, included as **Figure 2** through **Figure 5**.

### Groundwater Flow at the Water Table

The water levels measured in water table wells in December 2017 indicate groundwater flow to the northwest at a gradient of 0.0008 in the area of the parking lot (**Figure 2**). The water levels measured in offsite wells located to the east of the parking lot indicate groundwater flow to the southeast at a gradient of about 0.002.

The very low gradients of groundwater flow at the water table make it difficult to assess the predominant direction of groundwater flow, but it appears that there is groundwater flows to the northwest and that there is also a component of flow to the southeast. This flow pattern is also indicated by the water levels measured in water table wells in April 2016 (**Figure 4**). The water levels measured in April 2016 indicate a groundwater divide beneath the parking lot with some flow to the northwest and some flow to the southeast.

A water table map (**Figure 5**) based on water levels measure in November 2010 indicates groundwater flow at the water table exclusively to the southeast.

### Groundwater Flow at the Piezometer Level

The water levels measured in piezometers in December 2017 indicate groundwater flow at the site to the southeast at a gradient of 0.0004 (**Figure 3**).

### Vertical Gradients of Groundwater Flow

Groundwater elevations at nested wells MW1/PZ1, MW3/PZ3, and MW4/PZ4 indicate a slight downward flow of groundwater in the sand and gravel aquifer, while groundwater elevations at well nests MW2/PZ2 and MW11/PZ11 indicate a slight upward component of flow. The vertical

gradients at PZ9/PZ9A have been slightly steeper, and have varied from upward to downward. PZ9 is screened in the sand and gravel aquifer, and PZ9A is screened in the top of the sandstone aquifer at a depth of about 102 to 107 feet below ground surface.

The water level measurements and estimated flow directions are generally consistent with prior investigation findings.

### **Groundwater Chlorinated Volatile Organic Compound (CVOC) Concentrations**

The groundwater analytical laboratory report is included in **Attachment A** and results are summarized in **Table 2**.

Overall CVOC concentrations have decreased due to biodegradation influenced by the whey injections which began in December 2009. The April 2016 sampling event occurred approximately 1 year after the second (and last) full round of whey injections, with the PCE concentrations at many of the wells within the groundwater plume showing an approximately 30 percent decrease from the previous sampling event that occurred after the first full round of whey injections.

The December 2017 sampling event occurred approximately 2.75 years after the second full round of whey injections (completed in April 2015). Some water table wells indicate a slight increase in CVOC concentrations since the last sampling round in April 2016, but overall concentrations at the water table have decreased greatly since 2008 when the first rounds of water quality samples were analyzed.

**Table 2** includes total CVOC concentration (sum of the concentration of the five CVOCs listed on **Table 2**) for the first and last rounds of samples analyzed at each monitoring well. The percent change in concentration is calculated based on the total CVOC concentration for the first and last rounds of samples analyzed at each well. Overall the data indicates the current CVOC concentrations at the water table wells are lower than the original detected CVOC concentrations (ranging from 1.4 percent to 52.7 percent of the original concentration). Exceptions are the CVOC concentrations detected at MW7 and MW12 which have stayed the same or increased slightly.

CVOC concentrations detected at the piezometers have generally been much lower than the CVOC concentration detected at the water table nested with the piezometer at each location. Most piezometers indicate a slight increase in CVOC concentrations since the last sampling round in April 2016. Overall concentrations at the piezometers have increased somewhat since 2008 when the first rounds of water quality samples were analyzed. However groundwater quality results from the piezometers indicate decreases in PCE concentrations, and increases in concentrations of the PCE degradation compounds cis-1,2-DCE and vinyl chloride.

## SUMMARY AND RECOMENDATIONS

The groundwater quality results indicate consistent decreases in PCE concentrations within the groundwater plume along with degradation of the PCE into cis-1,2-DCE and vinyl chloride daughter products. These findings are consistent with the biodegradation of contaminants associated with injection of whey.

SCS is preparing a site investigation report (SIR) as outlined in Change Order #6, and will evaluate additional groundwater monitoring needs in conjunction with data analysis for the SIR.

The next step toward implementing a sub-slab vapor mitigation system is to perform sub-slab vacuum tests to provide information needed to design the sub-slab vapor mitigation system. A vapor mitigation system will be designed to mitigate the sub-slab VOC vapors from the retail spaces that exceed the November 2017 WDNR sub-slab Vapor Risk Screening Levels (VRSLs) for small commercial buildings. A mitigation subcontractor will perform the vacuum testing and prepare a letter report with the results. SCS will submit a scope and cost for the complete vapor mitigation system based on the vacuum test results. SCS and a mitigation subcontractor will install the mitigation system.

Please contact Betty Socha at (608) 216-7331, or [bsocha@scsengineers.com](mailto:bsocha@scsengineers.com) if you have any questions concerning this letter.

Sincerely,

Betty J. Socha, PhD, PG

**Table 2. Groundwater Analytical Results Summary - VOCs**  
**Laundry Land Cleaners / SCS Engineers Project #25211374.50**

Laboratory Notes:

\* = Indicates value in between the limit of detection and the limit of the quantitation.

DUP = Result of duplicate analysis in this quality assurance batch exceeds the limits for precision.

J = Estimated concentration below laboratory quantitation level.

J1 = Estimated concentration at or above the Limit of Detection (LOD) and below the Limit of Quantitation (LOQ).

Q = Laboratory control sample outside acceptance limits.

S1H = First sample matrix spike recovery was high.

S2H = Second sample matrix spike recovery was high.

S2L = Second sample matrix spike recovery was low.

(1) Chloromethane - Check standard for this analyte exhibited a low bias. Sample results may also be biased low.

(2) 1,2,4-Trichlorobenzene - Check standard for this analyte exhibited a low bias. Sample results may also be biased low. Chloromethane - Check standard for this analyte exhibited a high bias. Sample results may also be biased high.

(3) Naphthalene - Result of duplicate analysis in this quality assurance batch exceeds the limits for precision.

(4) 1,1,1-Trichloroethane, Dichlorodifluoromethane - Check standard for this analyte exhibited a high bias. Sample results may also be biased high.

(5) 1,1-Dichloroethylene, 2,2-Dichloropropane, Methylene Chloride - Result of duplicate analysis in this quality assurance batch exceeds the limits for precision. 4-Isopropyltoluene - First sample matrix spike recovery was high.

(6) Methylene Chloride - Check standard for this analyte exhibited a high bias. Sample results may also be biased high.

(7) 1,2-Dibromo-3-chloropropane, Bromoform - Specified calibration criteria was not met.

(8) Surrogate = Post-analysis pH measurement indicates insufficient VOA sample preservation.

(9) Methyl-tert-butyl ether, Methylene Chloride, Vinyl Chloride, trans-1,2-Dichloroethene, 1,1-Dichloroethene, and Chloroethane = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery. 1,1-Dichloroethane = Analyte recovery in the laboratory control sample exceeded QC limits. Analyte presence below reporting limits in associated sample. Results unaffected by high bias. Matrix Spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

(10) 1,1-Dichloroethane = Analyte recovery in the laboratory control sample exceeded QC limits. Analyte presence below reporting limits in associated sample. Results unaffected by high bias.

(11) 1,1-Dichloroethane = Analyte recovery in the laboratory control sample exceeded QC limits. Analyte presence below reporting limits in associated sample. Results unaffected by high bias.

Surrogates - 4-Bromofluorobenzene (S) = Post-analysis pH measurements indicates insufficient VOA sample preservation

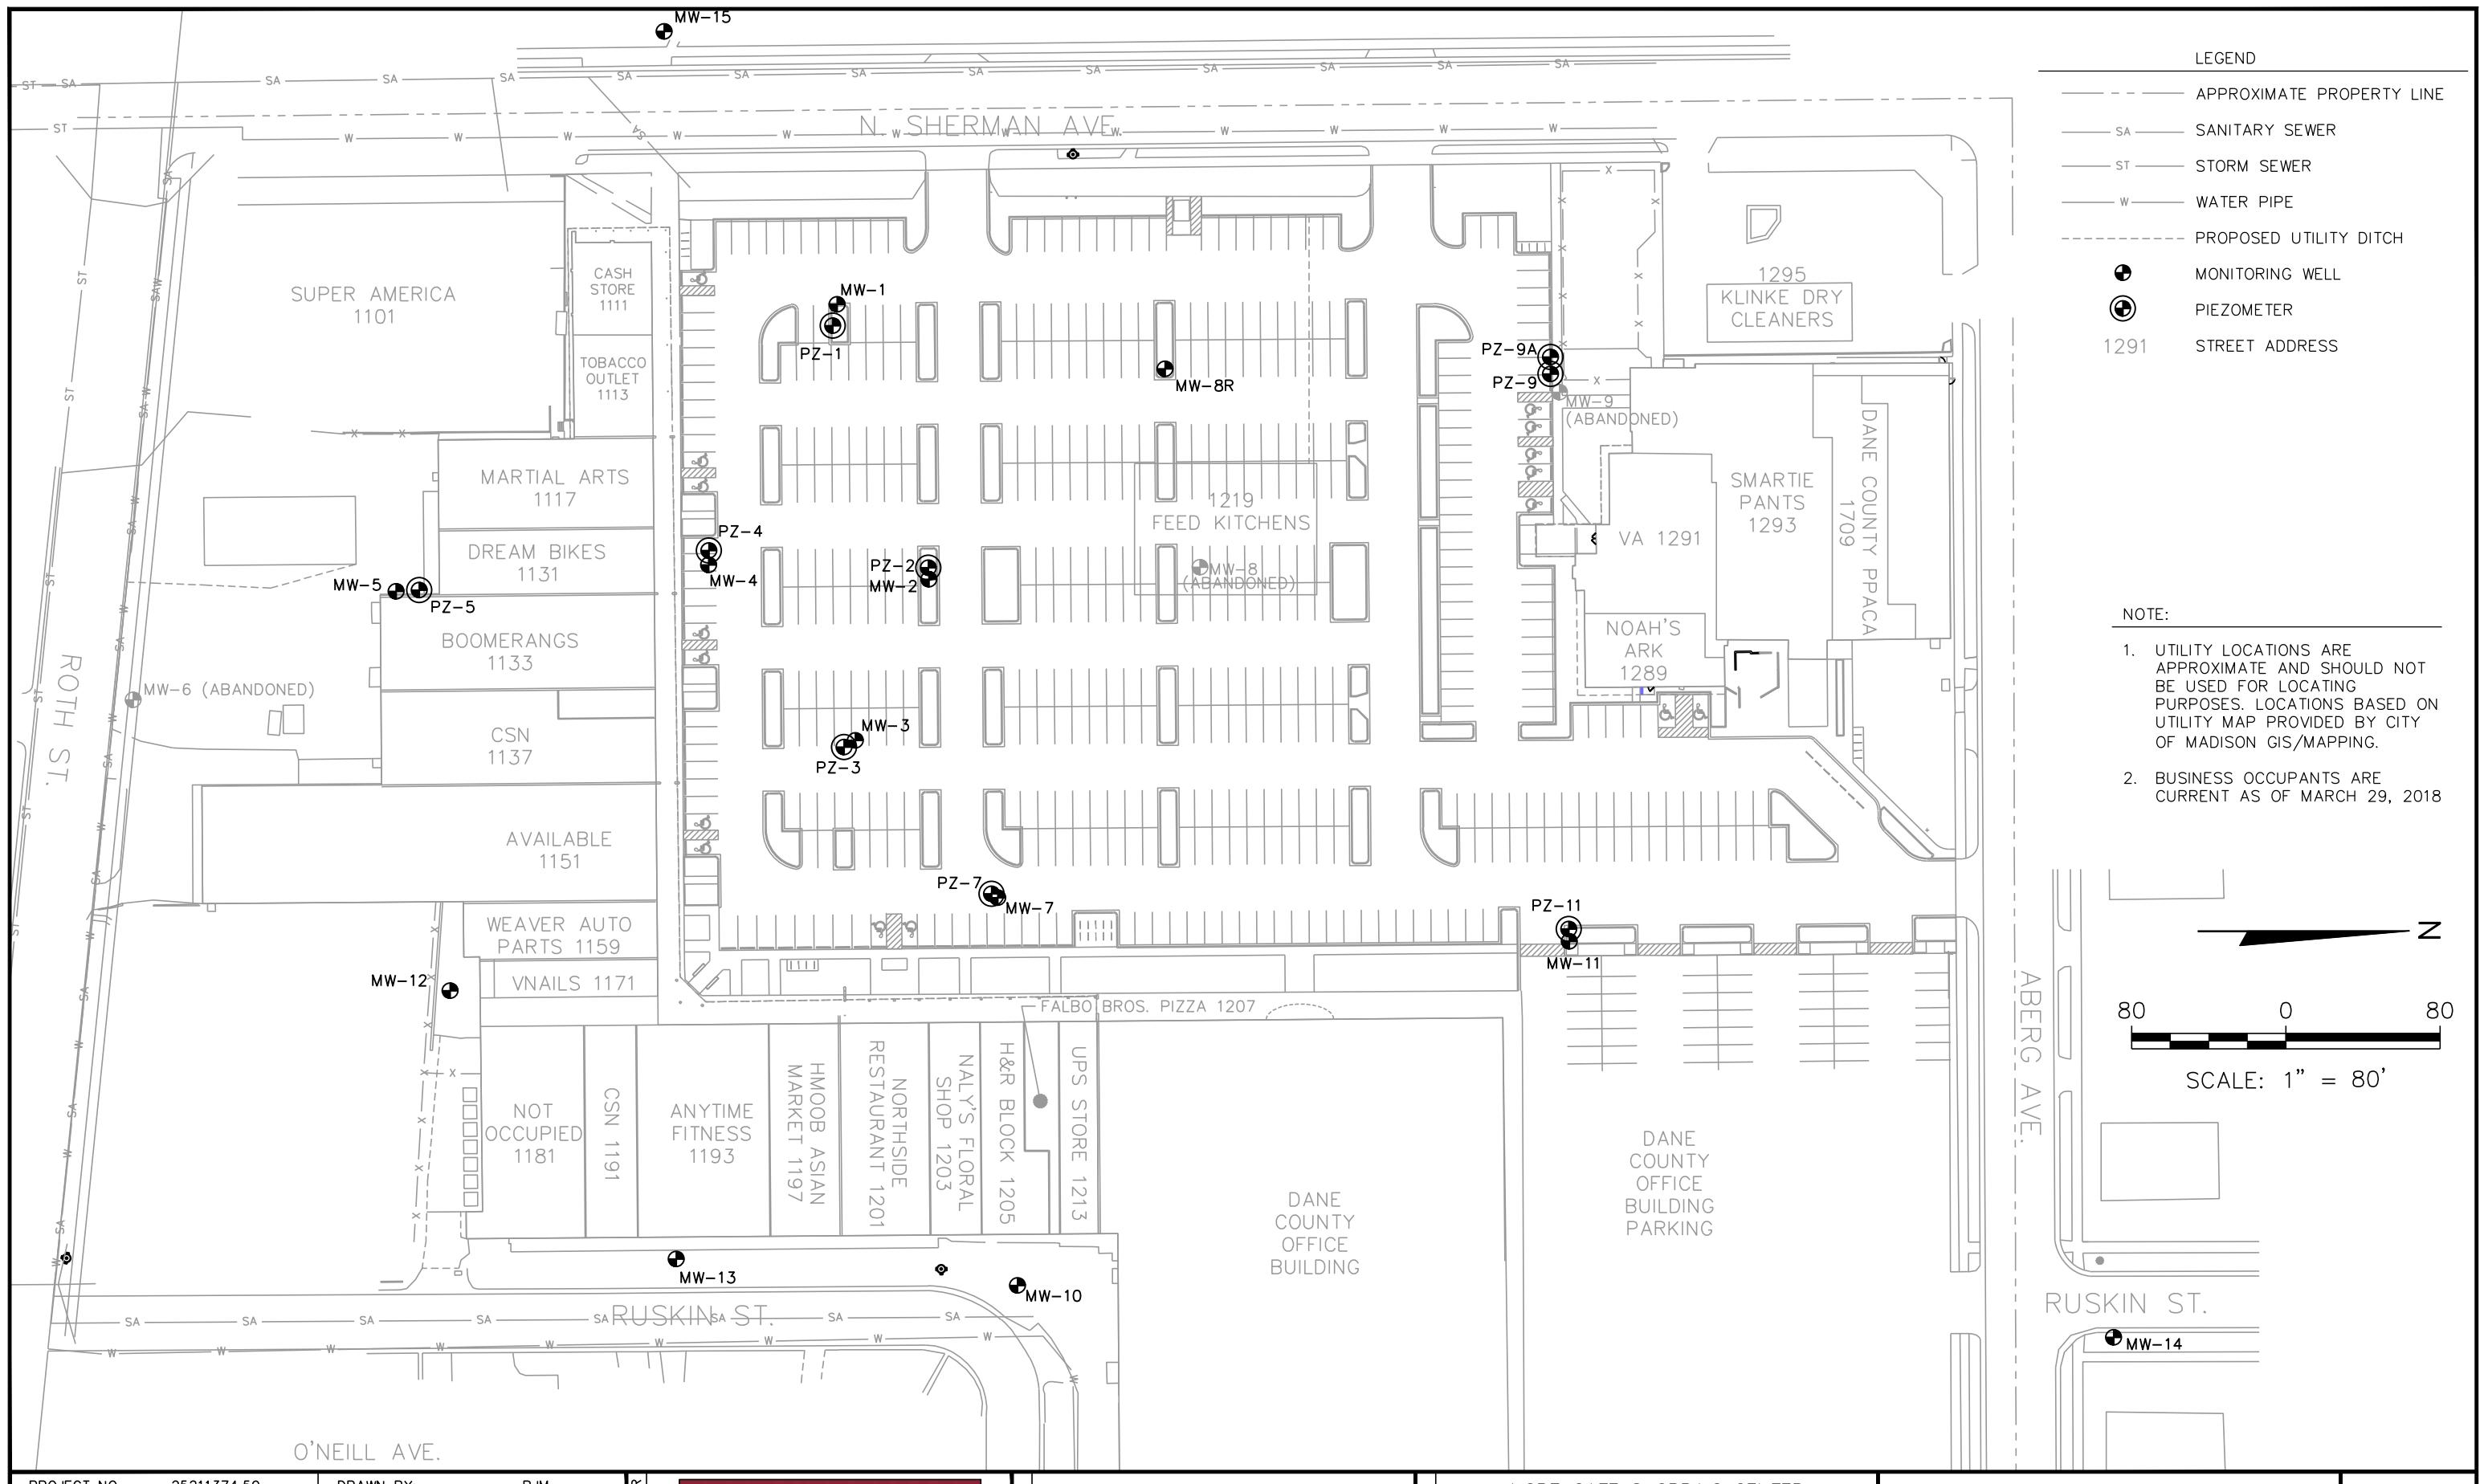

(12) Styrene = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

Groundwater Laboratory Report Dated December 27, 2017

December 27, 2017

Betty Socha  
SCS ENGINEERS  
2830 Dairy Drive  
Madison, WI 53718

RE: Project: 25211374.57 NORTHGATE SHOPPING  
Pace Project No.: 40162783

Dear Betty Socha:

Enclosed are the analytical results for sample(s) received by the laboratory on December 21, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky  
dan.milewsky@pacelabs.com

## QUALIFIERS

Project: 25211374.57 NORTHGATE SHOPPING

Pace Project No.: 40162783

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### LABORATORIES

PASI-G Pace Analytical Services - Green Bay

### ANALYTE QUALIFIERS

pH Post-analysis pH measurement indicates insufficient VOA sample preservation.
