

January 9, 2015

REC'D JAN 12 2015

Rick & Cathy Gulick  
5231 40<sup>th</sup> Ave  
Kenosha, WI 53142

**Subject: Environmental Investigation Sampling Results**  
**BRRTS#: 02-30-552186**

Dear Mr. and Mrs. Gulick:

In accordance with the executed Agreement to Provide Access for Sampling Activities, and in accordance with Wisconsin Department of Natural Resources (WDNR) regulation NR 716.14, Environmental Forensic Investigations, Inc. (EnviroForensics) is providing the results of environmental samples collected from your property located at 5231 40<sup>th</sup> Avenue in Kenosha, Wisconsin. The samples were collected on December 9, 2014. The sampling activities are part of an environmental investigation being performed for the Martino's Master Drycleaner facility located at 3917 52<sup>nd</sup> Street in Kenosha, WI at the direction of the WDNR pursuant to the authority granted to it under State and Federal law. The chemicals of concern for the investigation are the dry cleaning solvent tetrachloroethene (PCE) and its associated breakdown products.

The Responsible Party is:

Martino's Master Drycleaners  
3917 52<sup>nd</sup> Street  
Kenosha, WI  
262-694-7545

### **Sampling Results**

Two (2) sub-slab vapor samples designated 6190-5231-SSV-1 and 6190-5231-SSV-2 were collected from the basement of your home. Indoor air samples 6190-5231-IA-1 and 6190-5231-IA-2 were collected from the basement and first floor, respectively. For quality control purposes a sample of outdoor air designated 6190-5231-OA was also collected. The sampling locations are depicted on the attached figure. The results of the vapor and air samples are summarized and compared to WDNR standards on the attached table. The laboratory report that relates to the vapor and air samples are also attached.

As shown on the attached table, the sub-lab vapor samples contained both PCE and trichloroethene (TCE), which is a breakdown product of PCE. The concentration of TCE in sub-slab vapor sample 6190-5231-SSV-2 was above the residential vapor risk screening level

*Document: 6190-0496*

Environmental Forensic Investigations, Inc.

Phone: 262-290-4001 • Fax 317-972-7875

established by WDNR for use in evaluating chemical concentrations at sites such as this. Chloroform was also detected in the sub-slab vapor samples at concentrations below the vapor risk screening level.

PCE and TCE were not detected in the indoor air samples collected from your home on December 9, 2014. Two (2) other compounds unrelated to dry cleaning solvent were detected in the indoor air samples, including chloroform and 1,2-dichloroethane at concentrations just above the vapor action levels. Since chloroform and 1,2-dichloroethane are not breakdown products of PCE, the source of these compounds could be from household products that contain these compounds.

The sampling results indicate that PCE vapor is accumulating below the basement floor slab. However, since the PCE and TCE concentrations in indoor air are below the action levels, there does not appear to be an immediate risk.

We may request permission to re-sample for sub-slab and indoor vapors periodically during our investigations. If PCE and TCE are found in future sub-slab vapor samples, or if these chemicals are found in future indoor air samples, EnviroForensics may request permission to install a vapor mitigation system similar to the system installed at your neighbor's home to the south. Future remediation at the Martino's property may also eliminate the vapor risk to your home.

If you have any questions or concerns, please contact me at 414-326-4412 or by email at [bkappen@enviroforensics.com](mailto:bkappen@enviroforensics.com). The WDNR project manager, Doug Cieslak, can be reached at 262-884-2344. We greatly appreciate your help and patience with this matter.

Sincerely,  
**Environmental Forensic Investigations, Inc.**

**Notes:**

Results reported in micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ )

Analysis performed by Envision Laboratories according to EPA Method TO-15

IA = Indoor Air

OA = Outdoor air (background)

SSV = Sub-slab vapor

**Bolded** values are above detection limits

**Bolded and shaded** values exceed the applicable residential screening or action level

# Understanding Chemical Vapor Intrusion Testing Results

PUB-RR-977

Apr 2014

## From the Lab to You

Chemical vapor samples were taken from underneath your house or building and possibly indoors as well. These samples have been tested by a certified laboratory and a report was issued. The Wisconsin Department of Natural Resources (DNR) uses these test results to determine if people in the building are being exposed to chemical vapors coming from nearby contaminated soil or groundwater, and to decide what, if any, action is needed to prevent this exposure.

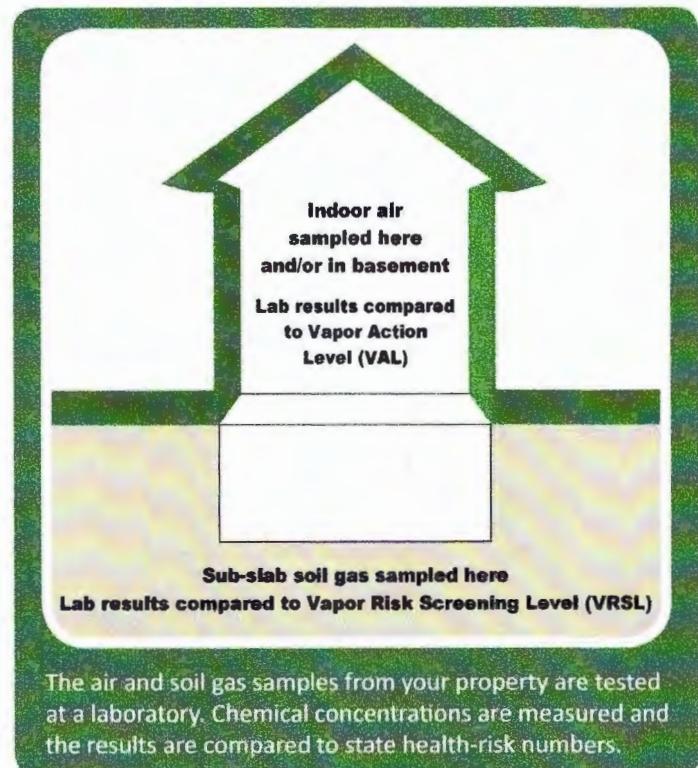

## Indoor Air Testing Results

If indoor air samples were collected in your house or building, test results from the lab will be compared to the state Vapor Action Level (VAL) for chemicals of concern. If test results show chemical concentrations in your air below the VAL then adverse health effects are not expected, even if you were to breathe the chemical at this concentration for your whole life.

Test results showing chemical concentrations in the air at or above the VAL prompt DNR to recommend that exposures to these chemical vapors be reduced. If test results show concentrations significantly above the VAL, or more than one type of chemical vapor is identified in your indoor air, the risk from exposure increases. If the concentration of any indoor chemical vapor exceeds 10 times the VAL, DNR is concerned about even short-term exposure and will typically require immediate action to address the problem.

The VAL for each chemical is set by scientific research. It is protective of all people, including those who are most susceptible to adverse health effects. For cancer-causing chemicals, no more than 1 in 100,000 people breathing indoor air with chemical concentrations below the VAL are expected to get cancer from exposure to that chemical. Concentrations above the VAL are of greater concern.

If test results identify chemicals in your air that are not present in nearby soil or groundwater contamination, it is likely that these vapors are coming from some product or activity in or near your house or building. Many everyday consumer products (e.g., cleaners, solvents, polish, adhesives, lubricants, aerosols, insect repellants, etc.); combustion processes (e.g., smoking, home heating); fuels in attached garages; dry cleaned clothing or draperies; and occupant activities (e.g., craft hobbies), also release chemical vapors into the air.

## Sub-slab Soil Gas Testing Results

Soil gas samples were collected from the ground beneath the concrete slab of your building foundation or basement. The lab measured the concentrations of various chemicals in these samples. DNR compares these measurements to the state Vapor Risk Screening Level (VRSL), which identifies the concentration of a chemical in soil gas that scientific research suggests can be a health risk if vapor enters a building. If soil gas measurements exceed the VRSL for a chemical of concern, action to reduce exposure is strongly recommended.

The VRSL is a higher number (higher chemical concentration) than the VAL because it is presumed that concrete building foundations and basement walls will prevent most soil gas from entering a building. Further, any soil gas that does enter a building through cracks, holes, sump pumps, drains, etc., will be diluted to some extent by the indoor air. So, people inside will not be breathing air that includes the full concentration of chemical vapors that exist in the ground.

Wisconsin Department of Natural Resources  
P.O. Box 7921, Madison, WI 53707  
[dnr.wi.gov](http://dnr.wi.gov), search "Brownfields"

DNR generally relies on the test results of the sub-slab soil gas samples when determining what, if any, action should be taken related to chemical vapors coming from nearby soil or groundwater contamination. Indoor air quality is highly variable, and it is difficult to make a definitive decision about vapor intrusion based on indoor air sampling alone.

#### Follow-Up Actions

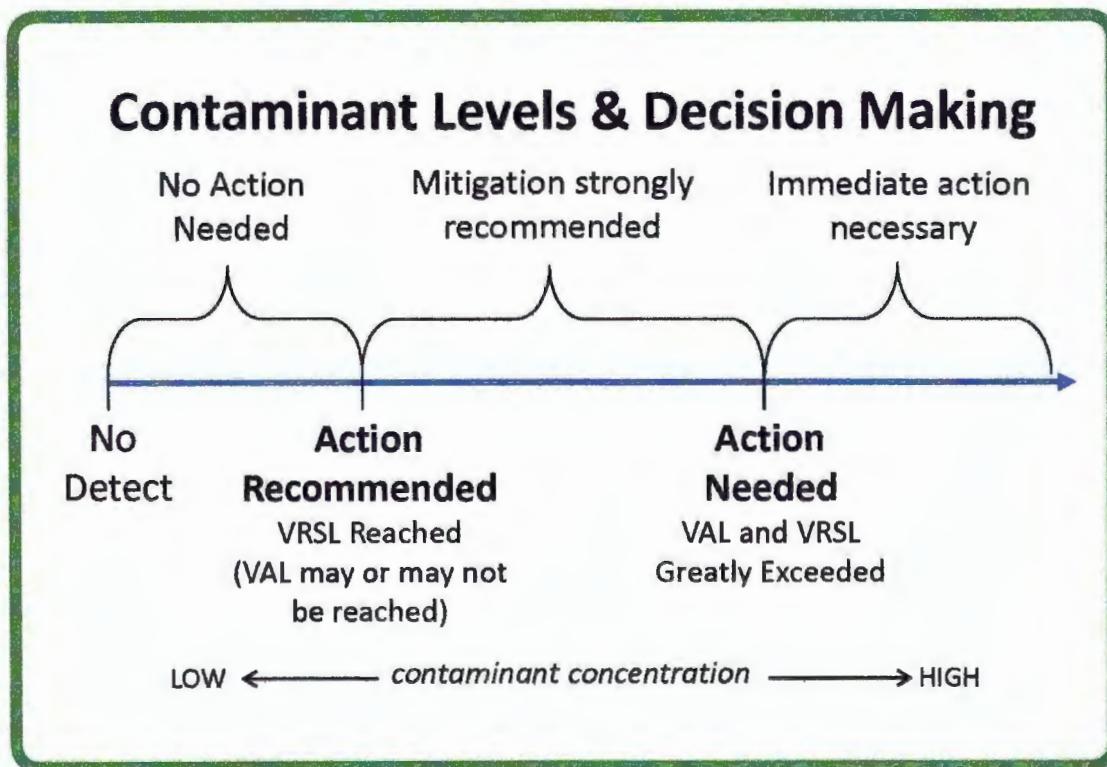

If your test results are less than a VAL for indoor air, or a VRSL for sub-slab soil gas, then the air in the house or building should not present a health concern. Follow-up sampling and testing may be necessary to confirm the results, but no other action is typically suggested.

When test results show soil gas chemical concentrations above a VRSL, both DNR and the Wisconsin Department of

Health Services recommend that owners take action to reduce potential exposure. This typically involves installing a vapor mitigation system that vents chemical vapors from beneath your home or building to the outdoors, similar to a radon mitigation system.

If indoor air concentrations exceed a VAL, but sub-slab concentrations are less than a VRSL, then the chemical vapors are most likely coming from indoor sources. Steps should be taken by the house or building owner to identify the products and practices causing the problem and implement appropriate remedies.

If soil gas mitigation is recommended, a representative of the party who is responsible for the soil or groundwater contamination will contact you to discuss your options.

**A Note about Measurement Units:** The lab report may include some unfamiliar technical language. The most important point to note is whether or not the test result for a specific chemical exceeds a VAL or VRSL, which are also sometimes referred to, generically, as "screening levels."

The concentration of gaseous pollutants in air is typically described in two different ways: 1) as units of mass per volume, where  $\mu\text{g}/\text{m}^3$  represents micrograms of gaseous pollutant per cubic meter of ambient air; and 2) as parts per billion by volume (ppbv), where the volume of a gaseous pollutant is compared to a set volume of ambient air. These are the numbers that are compared to the VAL and VRSL.

Client Project Name: 6190 Martino's Cleaners

Dear Mr. Kappen,

Please find the attached analytical report for the samples received December 12, 2014. All test methods performed were fully compliant with local, state, and federal EPA methods unless otherwise noted. The project was analyzed as requested on the enclosed chain of custody record. Please review the comments section for additional information about your results or Quality Control data.

Feel free to contact me if you have any questions or comments regarding your analytical report or service.

Thank you for your business. EnvisionAir looks forward to working with you on your next project.

Yours Sincerely,

A handwritten signature in black ink that reads "David Norris".
