BRRTS#: 02-30-552186
FID # 230007030

Dear Mr. Martino:

Environmental Forensic Investigations, Inc. (EnviroForensics) is pleased to provide this annual Groundwater Monitoring Report for activities conducted at the Martino's Master Dry Cleaners facility located at 3917 52nd Street in Kenosha, Wisconsin (Site). This report includes groundwater monitoring data collected during March, June September, and December 2015. The groundwater monitoring activities were conducted as part of the overall investigation of the nature and extent of subsurface impacts at the Site. The investigation is being performed as required by the Wisconsin Department of Natural Resources (WDNR) in accordance with Wisconsin Administrative Code (WAC) Chapters NR 169 and NR 716.

BACKGROUND AND SITE DESCRIPTION

The Site is located at 3917 52nd Street in central Kenosha, approximately two (2) miles west of Lake Michigan. The Site consists of a slab-on-grade, one-story, commercial ("strip mall") building with multiple spaces that are separately leased, an asphalt paved parking area, and a free standing restaurant space. The Site is bound by 52nd Street to the north, 40th Street to the west, a residential property to the south, and 39th Street to the east. The Site is situated in an area of mixed commercial and residential land use. The Site layout is depicted on **Figure 1**.

Historical releases of the dry cleaning solvent tetrachloroethene (PCE) have resulted in impacts to the subsurface, including soil, soil gas, and groundwater. The PCE source area is present beneath the former dry cleaning machine location. Chlorinated volatile organic compound (CVOC) impacts have migrated to the south, east, and west of the source area.

Environmental Forensic Investigations, Inc.

The Site stratigraphy is comprised of up to 4 feet of fill material followed by an upper zone of silty clay to silty clayey sand, which extends to an approximate depth of 5.5 to 8 feet below ground surface (bgs). This upper zone is underlain by clay which extends to a depth of approximately 20 feet bgs. Soil lithology exhibited a coarsening trend below 20 feet bgs with sandy clay and a few fine-grained sand lenses.

A perched groundwater zone is present in the fill material and more permeable sediments in the upper stratigraphic zone at the Site. The perched zone is encountered at depths of approximately 3 to 4 feet bgs. The local water table appears to be located within the deeper interval comprised of fine-grained sediment encountered at a depth of between 9 and 13 feet bgs, as represented by fairly consistent water levels in monitoring wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-9 and MW-10.

INVESTIGATION METHODS

EnviroForensics installed two (2) new monitoring wells designated MW-9 and MW-10 on properties south and east of the Site to define the extent of impacts. In addition, piezometer PZ-5 was installed immediately adjacent to existing well MW-5T to vertically delineate groundwater impacts. Well installation activities were completed on April 20 and 28, 2015. Monitoring well construction details are presented on **Table 1**.

Monitoring activities included depth to water measurements and the collection of groundwater samples from the entire monitoring well network, with the exception of MW-8 in the 4th quarter because it was submerged in water. Recently installed wells MW-9, MW-10 and PZ-5 were included in the monitoring program beginning with the 2nd quarter event.

Depth to water in each well at the Site was measured to the nearest 0.01 foot using an electronic water level indicator. Groundwater samples were collected by bailing or low-flow (minimal drawdown) groundwater purging procedures (EPA/540/S-95/504, April 1996). The procedure involves low volume groundwater purging rates while maintaining minimal drawdowns, typically less than 0.1 meters. EnviroForensics used a peristaltic pump to evacuate water from the screened portion of the well and to maintain flow through a multi-parameter water quality meter that measured groundwater geochemical parameters such as pH, oxidation-reduction potential (ORP), specific conductivity, temperature, turbidity, and dissolved oxygen. Water quality parameters were monitored throughout purging to verify stabilization prior to groundwater sample collection. Monitoring wells with limited recharge were bailed dry and sampled when recovery was sufficient. Field sampling data forms associated with the groundwater sampling activities are presented in **Attachment 1.**

Groundwater samples were collected directly into laboratory-provided containers having hydrochloric acid as a preservative. Sample containers were placed into a cooler containing ice for preservation purposes. All samples were submitted to a state-certified laboratory for

analysis. Proper chain-of-custody documentation was maintained at all times. Groundwater samples were analyzed for volatile organic compounds (VOCs) utilizing U.S. Environmental Protection Agency (EPA) SW-846 Method 8260.

INVESTIGATION RESULTS

Groundwater Elevation and Flow Direction

Groundwater elevation data are summarized in **Table 2**. Water table contour maps for the 2nd, 3rd, and 4th quarter monitoring events are presented on **Figures 2 through 4**. (Note: a contour map for the 1st quarter monitoring event is not included because MW-9 and MW-10 were not yet installed). The groundwater elevations exhibited normal seasonal variations during quarters one through three in 2015. Due to above average temperatures and rain during December 2015, groundwater elevations were unusually high for early winter, especially at MW-1 where the elevation was approximately 8 feet higher than average.

Shallower monitoring wells (MW-1, MW-2, MW-4, MW-5T, MW-9 and MW-10) at the Site indicate an uppermost, unconfined potentiometric surface at approximately 8 to 12 feet bgs. The indicated direction of groundwater flow using these monitoring points is to the east. However, in wells MW-3, MW-7, and MW-8 static groundwater levels are within two feet of ground surface. The non-conforming water levels may be due to the geology at this Site, which is a complex assemblage of discontinuous layers, lenses, and seams of sand, silt, and clay that are not well sorted. There is also a layer of fill 3-5 feet thick along the alleyway that appears to continue to a lesser thickness under the Site building. It is not unusual in this type of depositional environment for there to be zones of perched water.

The relative difference in the water table elevation between MW-2 and MW-4 averages 2.35 feet, indicating a horizontal hydraulic gradient of 0.008 across the monitoring well network. The vertical gradient between wells MW-5T and PZ-5 ranged from 0.014 to 0.041, indicating a downward gradient across the clay unit.

Groundwater Analytical Results

Groundwater analytical results are summarized in **Table 3** and illustrated on **Figure 5**. The laboratory analytical reports associated with each monitoring event are provided in **Attachment 2**. The analytical results are compared to public health criteria listed in WAC Chapter NR 140.

Samples collected from monitoring wells MW-1, MW-5T, and MW-8 contained PCE, trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), and/or vinyl chloride at concentrations above enforcement standards (ESs). Monitoring well MW-8, which is located approximately 50 feet due south of the source area and just off the edge of the alley, exhibited

the highest concentrations of PCE. MW-5T, which is located just upgradient, exhibited no PCE but had higher concentrations of breakdown product cis-1,2-DCE. Samples from MW-1 exhibited higher PCE concentrations during 2015 than in previous years.

Samples from MW-2 and MW-7, which are located further from the source area, contained relatively minor concentrations of TCE and/or cis-1,2-DCE only. The contaminants of concern were not detected in samples collected from perimeter monitoring wells MW-3, MW-4, MW-9 and MW-10.

The horizontal extent of impacts in groundwater above ESs and preventive action limits (PALs) is depicted on **Figure 5**. The extent of impacts above ESs is limited the alley south of the Site building, as well as within and just downgradient of the source area. Contaminants of concern were not detected in samples collected from piezometer PZ-5.

CONCLUSIONS AND RECOMMENDATIONS

Groundwater elevations measured across the monitoring well network are highly variable. Groundwater is encountered in some monitoring wells at approximately 13 feet bgs, and in other wells within 2 feet of the surface. EnviroForensics suspects this variation is due to the complex glacial geology and development near the Site building resulting in areas of perched groundwater. Overall, an evaluation of the data indicates a component of flow toward the east.

The concentrations of CVOCs detected in Site monitoring wells have been stable over the past three (3) years of quarterly monitoring. The groundwater plume has not expanded, and recently installed monitoring wells MW-9 and MW-10 have defined the downgradient extent. The results of samples collected from piezometer PZ-5 demonstrate that a clay layer occurring from approximately 8-20 feet bgs has limited the vertical migration of the groundwater plume.

EnviroForensics recommends that periodic monitoring continue during 2016 to maintain an updated evaluation of dissolved phase contaminant concentrations and distribution until remediation is implemented. Additional monitoring locations are not required.

GW depth: 2 ft bgs - 13 ft bgs

E.F. states:
- [CVOCs] @ MWs have been stable for 3 yrs

We appreciate the opportunity to provide you with this Groundwater Monitoring Report. If you have any questions or require additional information, please don't hesitate to contact us at 262-290-4001.

Sincerely,
Environmental Forensic Investigations, Inc.

Notes:

Samples analyzed for VOCs according to EPA Method 8260

Only detected compounds are listed

All concentrations reported in micrograms per liter (ug/L)

* Indicates the highest concentrations detected in duplicate samples are reported

[1] Value applies to total combined trimethylbenzenes

Bolded values are above method detection limits

Bolded and orange shaded values are above Public Health Enforcement Standard

Bolded and blue shaded values are above Public Health Preventive Action Limit

J = Analyte concentration detected between the Method Detection Limit and Reporting Limit

^ Indicates detection of chloroform or toluene less than the enforcement standard

MW-1 ◆ Monitoring well location

Grab groundwater sample from soil gas sampling point

Slab foundation #1

Slab foundation #2

Slab foundation #3

Analytes	Public Health	
	Preventive Action Limit	Enforcement Standard
PCE	**0.5**	**5**
TCE	**0.5**	**5**
cis-1,2-DCE	**7**	**70**
trans-1,2-DCE	**20**	**100**
VC	**0.02**	**0.2**

Notes:

1. Bold, shaded orange values exceed Public Health Enforcement Standard
2. Bold, shaded blue values exceed Public Health Preventive Action Limit
3. Bold values equal or exceed laboratory detection limits
4. Only compounds exceeding public health standards are shown in this figure
5. Results reported in micrograms per liter (ug/L)
6. PCE = Tectrachloroethene
7. TCE = Trichloroethene
8. cis-1,2-DCE - cis-1,2-Dichloroethene
9. trans-1,2-DCE = trans-1,2-Dichloroethene
10. VC = Vinyl Chloride
11. J = Analyte concentration detected between the laboratory Reporting Limit and the laboratory Method Detection Limit
12. Samples analyzed for VOCs according to EPA Method 8260
13. * = Indicated the highest concentrations detected in duplicate sample are reported

Extent of CVOC groundwater impacts above enforcement standards (dashed where inferred)

Extent of CVOC groundwater impacts above preventive action limits (dashed where inferred)

PROJECT NAME: Martino's Master Dry Cleaners — Well/Surface Station I.D.: MW-1

LOCATION/ADDRESS: 3917 52nd Avenue, Kenosha, WI — Sample Designation: 6190- MW-1

PROJECT NO.: 6190

CLIENT/CONTACT: Dan Martino Sr. — Personnel:

WATER LEVEL MEASUREMENTS DURING GAUGING:

Well Depth: 17.78 feet
Depth to Water: 11.60 feet
Well Diameter: 2 inches
Casing Volume: ____ gallons
Volume Removed: ____ gallons
Total No. of Casing Volumes Removed: ____
Date: 3-16-15

Factor * Water Column Height Equals Gallons	
Factor	Diameter
0.163	2" Well
0.653	4" Well
1.469	6" Well
Conversions	
1 mL =	0.0003 gal
1 gal =	3,785 mL

SAMPLING METHOD:

Low-Flow: ____
Grab/No-purge: ____
Bailer: ____
Peristaltic pump: X
Submersible Pump: ____
Passive Diffusion Bag[2]: ____
Other: ____
Was drawdown greater than 0.3 ft? (y/n): ____
Pump Depth (ft below TOC) (if applicable): ____

Stability Parameter Readings: Readings every five minutes for at least three readings to achieve stability for ALL parameters except as noted.

Start Time 3:25	Temperature (Celsius) +/- 3%	pH +/- 0.1	Oxidation-Reduction Potential (mV) +/- 10mV*	Specific Conductance (umhos/cm) +/- 3%	Turbidity (NTU) +/- 10%*	Dissolved Oxgen (mg/L) +/- 10%*	Sampling DTW (ft) <0.3ft	Flow Rate (ml/min) <250	mL Removed
3:30	15.09	7.04	129	0.754	99.6	4.21	11.60	200	1000
3:35	15.19	7.55	155	0.623	133	6.31			2000
3:40	15.28	7.61	178	0.606	536	5.70	12.30		3000
3:45	15.40	7.62	190	0.606	379	5.59			4000
3:50	15.51	7.57	194	0.602	360	5.45	12.41		5000
3:55	15.71	7.59	192	0.601	36.3	5.45			6000
4:00	15.85	7.55	196	0.600	35.6	5.39	12.44		7000

* Only one (1) of these need to reach stability.

PURGE[1]: Date ____ Time ____
SAMPLING: Date 3-16-15 Time 4:05

Sample Analysis	Volume	Type	Number of Containers	Preservative Type	Reaction (y/n)	Filter Type	Duplicate	MS/MSD
VOC 8260	40mL	VOA	3	HCl	N	—	—	—

EQUIPMENT DECONTAMINATION PROCEDURES:

DECONTAMINATION METHOD:
☐ Non Phosphatic detergent wash/distilled water rinse
☐ Methanol rinse

NOTES:

Sampler Signature: [signature]

[1]Monitoring wells sampled with a bailer require at least 3 to 5 well volumes to be purged prior to sampling unless the well bails dry prior to the removal of three (3) well volumes. Wells bailed dry should be sampled upon sufficient recovery for collection of samples. Record the time of purging and the time of sampling on the Groundwater Sampling Form.
[2]Include Date PDB Installed in well, and Date PDB removed and sampled in NOTES section.

PURGE[1]: Date: ____ Time: ____
SAMPLING: Date: 3-17-13 Time: 1:20

Sample Analysis	Volume	Type	Number of Containers	Preservative Type	Reaction (y/n)	Filter Type	Duplicate	MS/MSD
VOC 8260	40mL	VOA	6	HCl	N	—	Y (Dup-1)	—

EQUIPMENT DECONTAMINATION PROCEDURES:

DECONTAMINATION METHOD:
☐ Non Phosphatic detergent wash/distilled water rinse
☐ Methanol rinse

NOTES:

Sampler Signature: AdV

[1]Monitoring wells sampled with a bailer require at least 3 to 5 well volumes to be purged prior to sampling unless the well bails dry prior to the removal of three (3) well volumes. Wells bailed dry should be sampled upon sufficient recovery for collection of samples. Record the time of purging and the time of sampling on the Groundwater Sampling Form.
[2]Include Date PDB Installed in well, and Date PDB removed and sampled in NOTES section.

Sampler (print): Meagan Stettnisch

Pump Placement:
- If water level is above top of well screen, place pump in middle of well screen.
-If water level is below top of well screen, place pump in middle of water column.

WATER LEVEL MEASUREMENTS DURING GAUGING:

Well Depth 19.08 feet
Depth to Water 8.60 feet
Well Diameter 2 inches
Casing Volume 3.11 gallons
Volume Removed 0.45 gallons
tal No. of Casing Volumes Removed 0.145
Date 12/4/15

Conversion Factor for Well Volume	
0.01025	0.75" Well
0.041	1" Well
0.163	2" Well
0.653	2" Well

SAMPLING METHOD:

Low-Flow X
Grab/No-purge
Bailer[1]
Peristaltic pump X
Submersible Pump
Passive Diffusion Bag[2]
Other
Pump Depth (ft below TOC) (if applicable)

Stability Readings: Collect readings every 3 to 5 minutes for a minimum of 20 minutes and no less than 5 readings. If not equilibrated after 40 minutes, call PM.

	MUST BE STABLE			AT LEAST ONE MUST BE STABLE					
Time	Temperature (Celsius) +/- 3%	pH (S.U.) +/- 0.1	Specific Conductance (umSi/cm) +/- 3%	Oxidation-Reduction Potential (mV) +/- 10mV	Turbidity (NTU) <100 and +/- 10%	Dissolved Oxgen (mg/L) +/- 10%	Sampling DTW (ft) <0.3ft	Flow Rate (ml/min) <250	mL Removed
0915	6.35	7.39	3.72	214	164	11.53	9.20	~100	500
0920	7.44	7.21	3.55	210	27.4	0.81	9.40	~100	1000
0925	8.01	7.21	3.53	206	0.0	0.29	9.52	~100	1500

PURGE[1]: START Date 12/4/15 Time 0812
SAMPLING: FINISH Date 12/4/15 Time 1026

Sample Analysis	Volume	Type	Number of Containers	Reaction (y/n)	Filter Type	Duplicate	MS/MSD
VOC	40mL	HCl	3		-	-	-

NOTES: ← 0.3' drawdown, bail dry and sample when recharged.

Sampler Signature: Meagan Stettnisch

1. Monitoring wells sampled with a bailer require at least 3 to 5 well volumes to be purged prior to sampling unless the well bails dry prior to the removal of three (3) well volumes. Wells bailed dry should be sampled upon sufficient recovery of water in the well. Record the time of purging and the time of sampling on the Groundwater Sampling Form.

2. Include Date PDB Installed in well, and Date PDB removed and sampled in NOTES section.

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.
3	The matrix spike not within established limits.
4	The continuing calibration standard not within established limits.
8	Closing calibration standard not within established limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.
4	The continuing calibration standard not within established limits.
8	Closing calibration standard not within established limits.
33	Area percent recovery greater than 200%.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.
