Re: Remediation Site Operation, Maintenance, Monitoring and Optimization Report
Martino's Master Dry Cleaners
7513 41st Avenue, Kenosha, Wisconsin
BRRTS# 02-30-552188

Dear Ms. Pfeiffer:

EnviroForensics LLC (EnviroForensics) is pleased to provide this Remediation Site Operation, Maintenance, Monitoring and Optimization Report for the Martino's Master Dry Cleaners facility located at 7513 41st Avenue in Kenosha, Wisconsin (the Site). This report is being submitted in place of Department Form 4400-194. The remedial strategy for the Site consists of soil vapor extraction (SVE) to address soil and vapor-phase contamination, and natural attenuation of dissolved-phase groundwater contamination. The purpose of this report is to present:

- Operation, maintenance, and monitoring (OM&M) data related to the SVE system installed and operated at the Site; and
- Recent groundwater monitoring data to document natural attenuation progress and trends.

The previous OM&M Report was submitted on January 27, 2021, and covered the period of July 1 through December 31, 2020. For the first half of 2021, the SVE system only operated for approximately 760 hours (32 days); therefore, a report was not submitted for that time period. This report covers the period of January 1 through December 31, 2021.

Soil Vapor Extraction Progress

The SVE system consists of a vacuum blower connected to two (2) extraction wells screened in unconsolidated soil from 4-9 feet below ground surface (bgs). The blower and associated equipment and controls are housed inside a climate-controlled enclosure positioned near the east wall of the Site building. The extraction well locations and conveyance line paths are depicted on **Figure 1**. The extraction wells are connected to the SVE blower and associated equipment with conveyance piping. Routine OM&M activities are described in the *Remedial Action Implementation Report* dated June 11, 2018.

SVE system operational data is summarized in **Table 1**. During the current reporting period, the system operated sporadically for a total of for 2,873 hours, or 120 days. This equates to a system utilization of 36%. The system was frequently shut down by alarms related to power delivery; the exact cause for the alarms was not determined. The system was shut down intentionally on November 30, 2021 due to diminished efficiency and in preparation for progress/confirmation sampling.

The chlorinated volatile organic compound (CVOC) concentration in the system effluent is monitored by collecting samples in 1-liter vacuum canisters from a port in the discharge stack at a rate of 200 ml/minute. The samples are analyzed for tetrachloroethene (PCE) and its degradation compounds according to EPA Test Method TO-15. The effluent CVOC concentration trend is depicted in **Chart 1**. The concentration has decreased from more than 108,000 µg/m³ at start up to 201 µg/m³ in November 2021.

CVOC mass removal is calculated using the flow rate, system run time, and concentrations detected in samples of the system effluent. Time versus cumulative mass removal is illustrated in **Chart 2**. The estimated total mass removed through November 30, 2021 is 23.3 pounds. In total, the system has operated for 9,239 hours, or approximately 385 days, resulting in an average contaminant removal rate of 0.06 pounds per day.

Groundwater Monitoring Results

Groundwater monitoring was performed in March and June 2021. Groundwater elevation data are summarized in **Table 2**, and water table contour maps for March 22, 2021 and June 30, 2021 are presented on **Figures 2 and 3**, respectively. The indicated groundwater flow direction is southeast, which is consistent with prior monitoring events.

Comprehensive monitoring well sample analytical results are summarized and compared to WDNR standards in **Table 3**, and charts illustrating CVOC concentration trends for select

monitoring wells are presented in **Attachment 1**. A chart depicting VOC concentrations by distance from the source area to the distal end of the plume is included in **Attachment 1**. It graphically illustrates the production and degradation of PCE daughter products as dissolved-phase contaminants migrate with groundwater flow. CVOC concentrations in groundwater for the (2) most recent sampling events are shown on **Figure 4** along with an updated extent of the plume considering the most recent monitoring data. An evaluation of the monitoring data and trend charts indicates that:

- CVOC concentrations are stable at near-source wells MW-3 and MW-6.
- Degradation of cis-1,2-dichloroethene to vinyl chloride is proceeding near MW-2 (likely fueled by the presence of petroleum-related compounds), and at downgradient well MW-12.

Concentrations of dissolved gases (ethene, ethane, and methane) and parameters defining redox conditions in groundwater are summarized in **Table 4**. Biodegradation end products ethene and/or ethane were detected in several samples, indicating that dechlorination of vinyl chloride is occurring. Oxidation-reduction potential (ORP) is only slightly negative; however, low dissolved oxygen and the presence of methane at concentrations higher than 1 mg/L are indicative of strong reducing conditions.

Conclusions

The CVOC concentration in the SVE system effluent diminished toward the end of the reporting period, indicating decreased efficiency due to less availability of volatile contamination. The two (2) most recent effluent samples contained less than 300 µg/m³ of CVOCs. EnviroForensics recommends that soil and sub-slab vapor sampling be performed at this time to determine whether additional remediation is likely to have any demonstrable benefit. If the sampling results are such that vapor intrusion risk has been addressed and further reductions in soil concentrations will not affect post-closure obligations, SVE will not be resumed.

The groundwater contaminant plume is stable, and the sample results demonstrate advanced degradation of PCE, especially in the downgradient part of the plume. Strong reducing conditions for continued dechlorination are persistent. Groundwater monitoring will be conducted periodically for purposes of documenting natural attenuation and plume stability.

Notes:

All values are in feet
 AMSL = above mean sea level
 DTW = Depth to water
 NA = Survey data not available
 NM = Not measured
 TOC = Top of Casing
 Shaded values are anomalous and excluded from statistics

Notes:

All concentrations reported in units of micrograms per liter ($\mu\text{g/l}$)

Only detected compounds are listed

Samples analyzed according to US EPA Method 8260

Bolded values are above detection limits

Bolded and Orange Shaded values indicates an exceedance of the Public Health Enforcement Standard

Bolded and Blue Shaded values indicates an exceedance the Public Health Preventive Action Limit

J = Analyte concentration detected between the laboratory Reporting Limit and the laboratory Method Detection Limit

NE = Not Established

NA = Not Analyzed</

TABLE 4
DISSOLVED GASES AND REDOX PARAMETERS IN GROUNDWATER
 Martino's Master Drycleaners
 7513 41st Avenue, Kenosha, Wisconsin

Monitoring Well Identification	Sample Date	Ethane ($\mu\text{g/L}$)	Ethene ($\mu\text{g/L}$)	Methane ($\mu\text{g/L}$)	Dissolved Oxygen (mg/L)	Oxidation-Reduction Potential (mV)
MW-14	09/22/14	--	--	--	8.79	-119
	11/13/14	--	--	--	11.23 *	-42
	03/18/15	--	--	--	0.50	-42
	06/22/15	--	--	--	7.25	-50
	09/18/15	--	--	--	0.33	-78
	11/30/15	--	--	--	0.42	-83
MW-15	09/15/20	--	--	--	0.06	-49
	12/07/20	--	--	--	0.76	-50
	03/22/21	--	--	--	0.97	-59
MW-16	09/15/20	--	--	--	0.04	-31
	12/07/20	--	--	--	1.07	-43
	03/22/21	--	--	--	0.18	-46
MW-17	09/15/20	--	--	--	4.60	143
	12/07/20	--	--	--	4.17	37
	03/22/21	--	--	--	4.92	53
MW-18	09/15/20	--	--	--	0.04	-8
	12/07/20	--	--	--	0.62	-2
	03/23/21	--	--	--	1.48	41

Notes:

$\mu\text{g/L}$ - micrograms per liter

mg/L = milligrams per liter

mV = millivolts

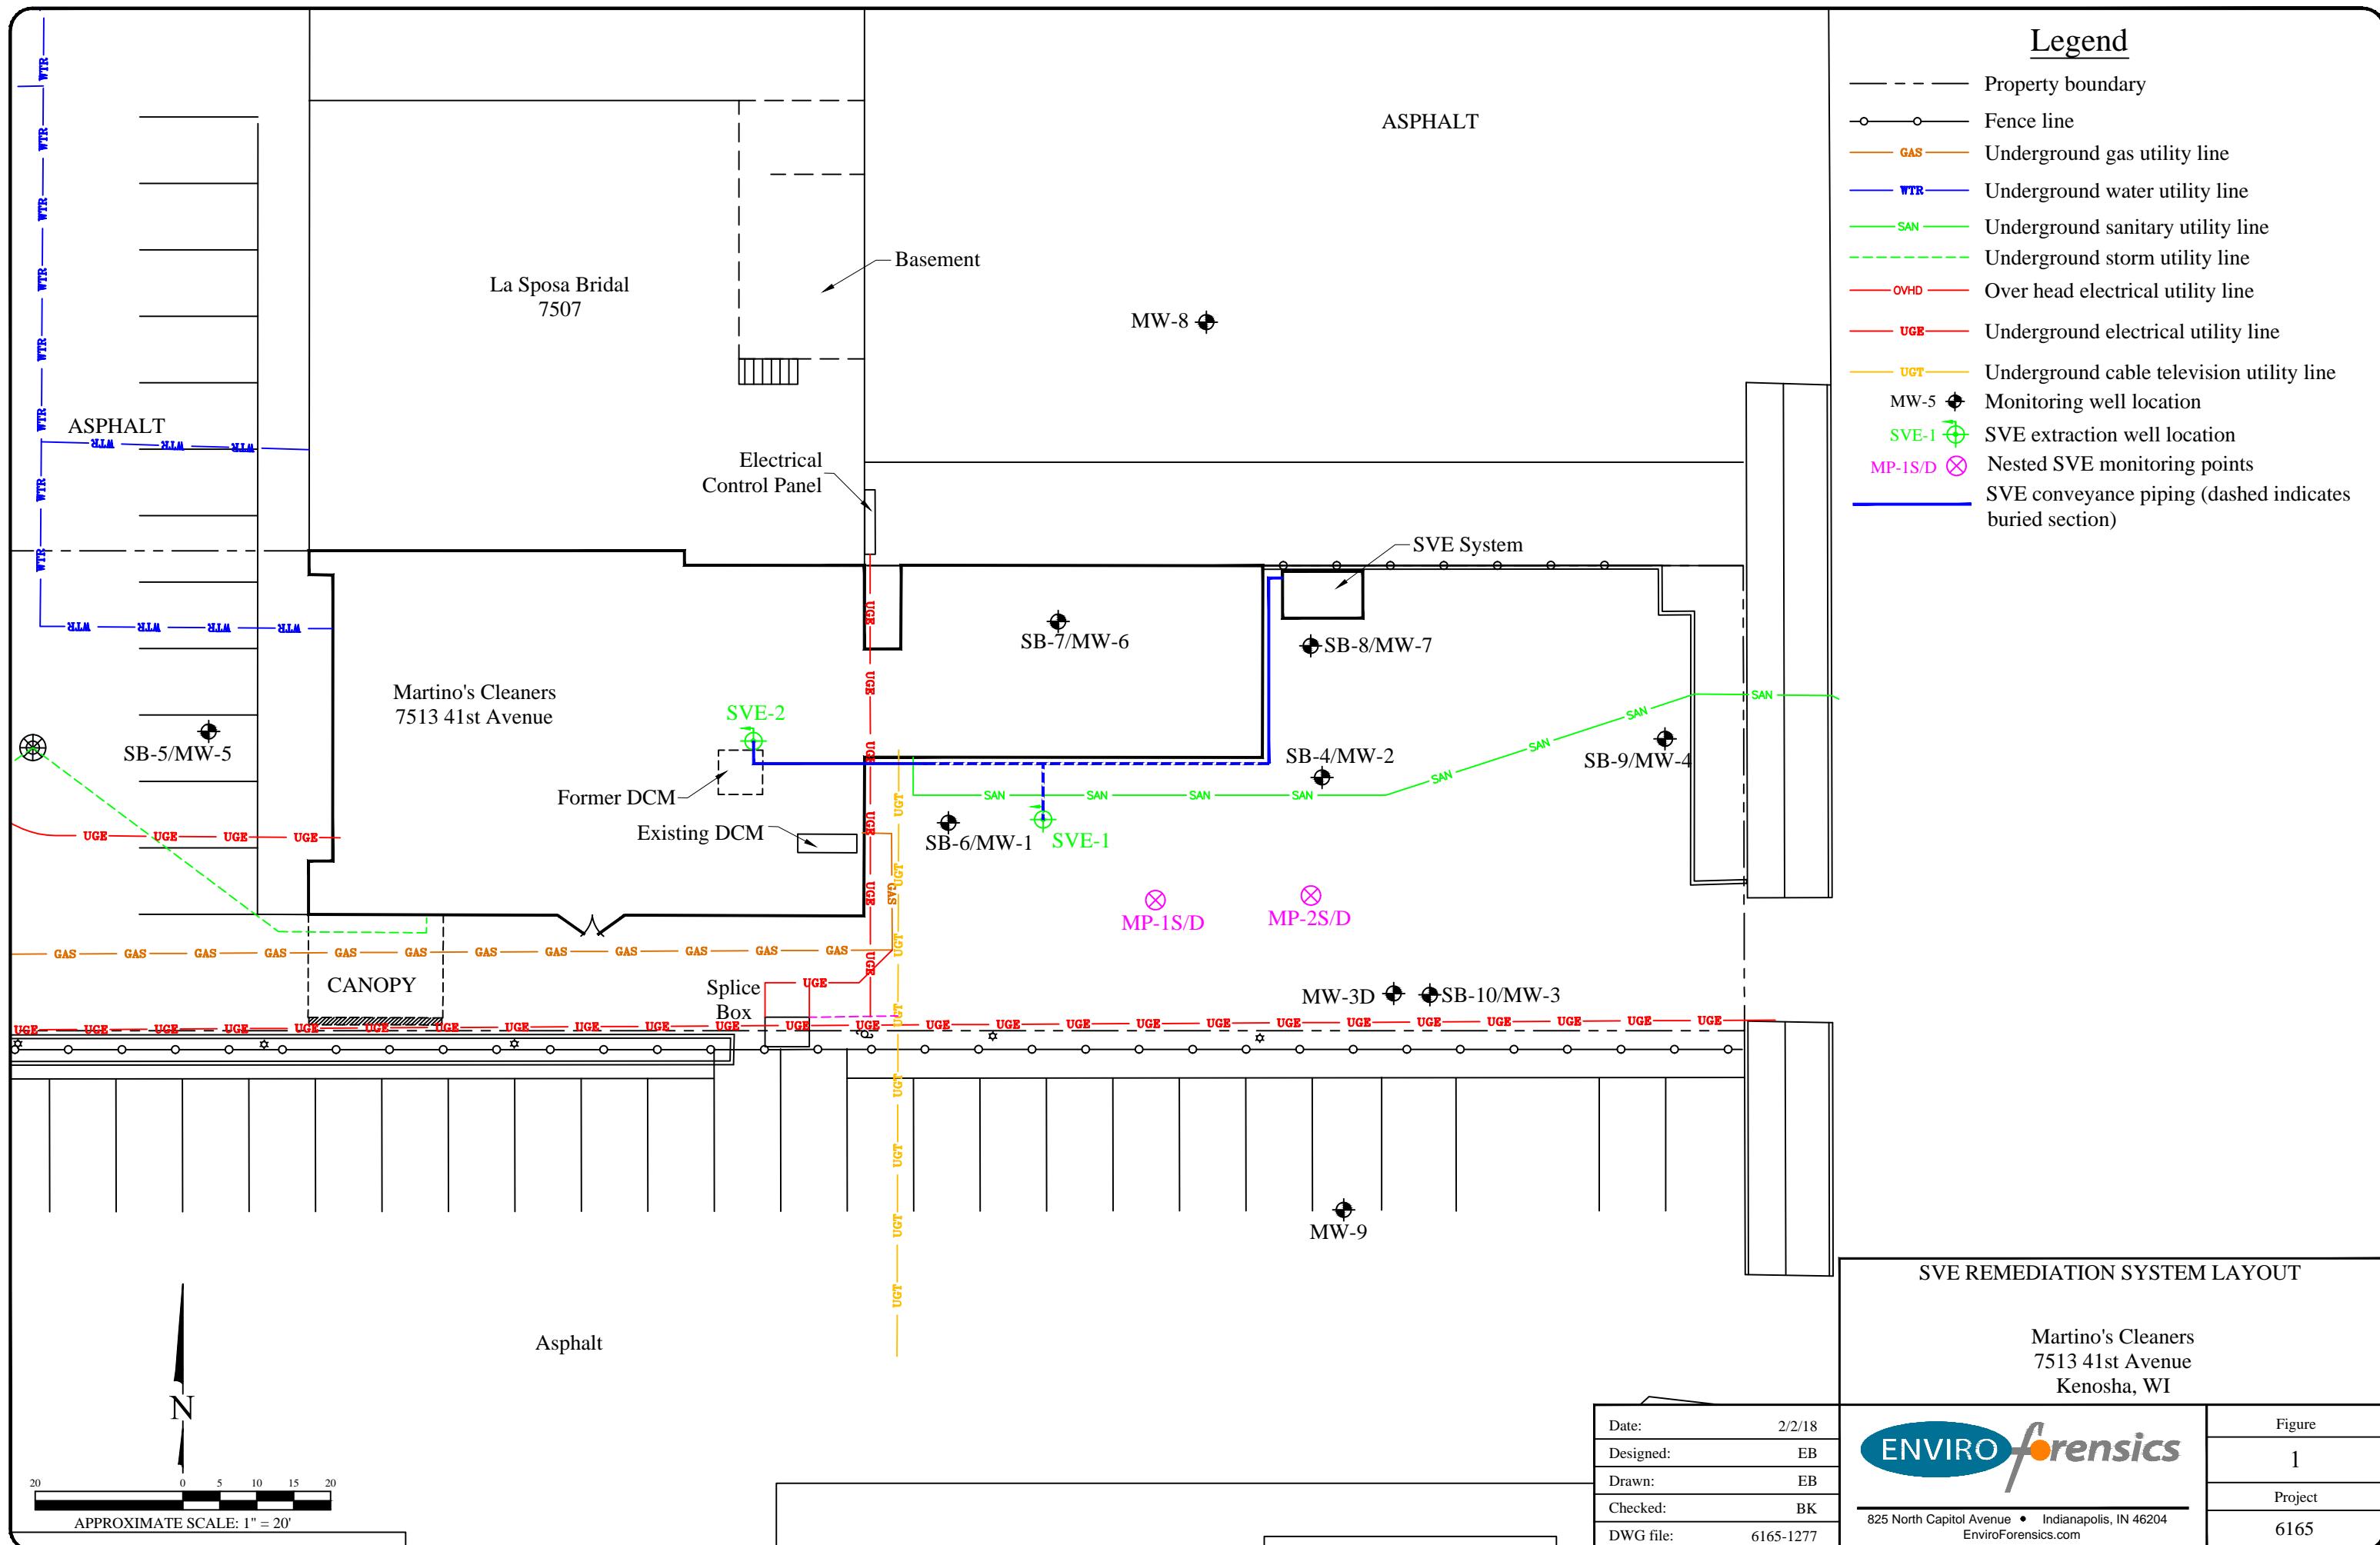

* = Dissolved oxygen concentrations above 10 mg/L; malfunction of probe/sensor suspected.

-- = Not Analyzed

J = Estimated concentration between the laboratory Reporting Limit and Method Detection Limit

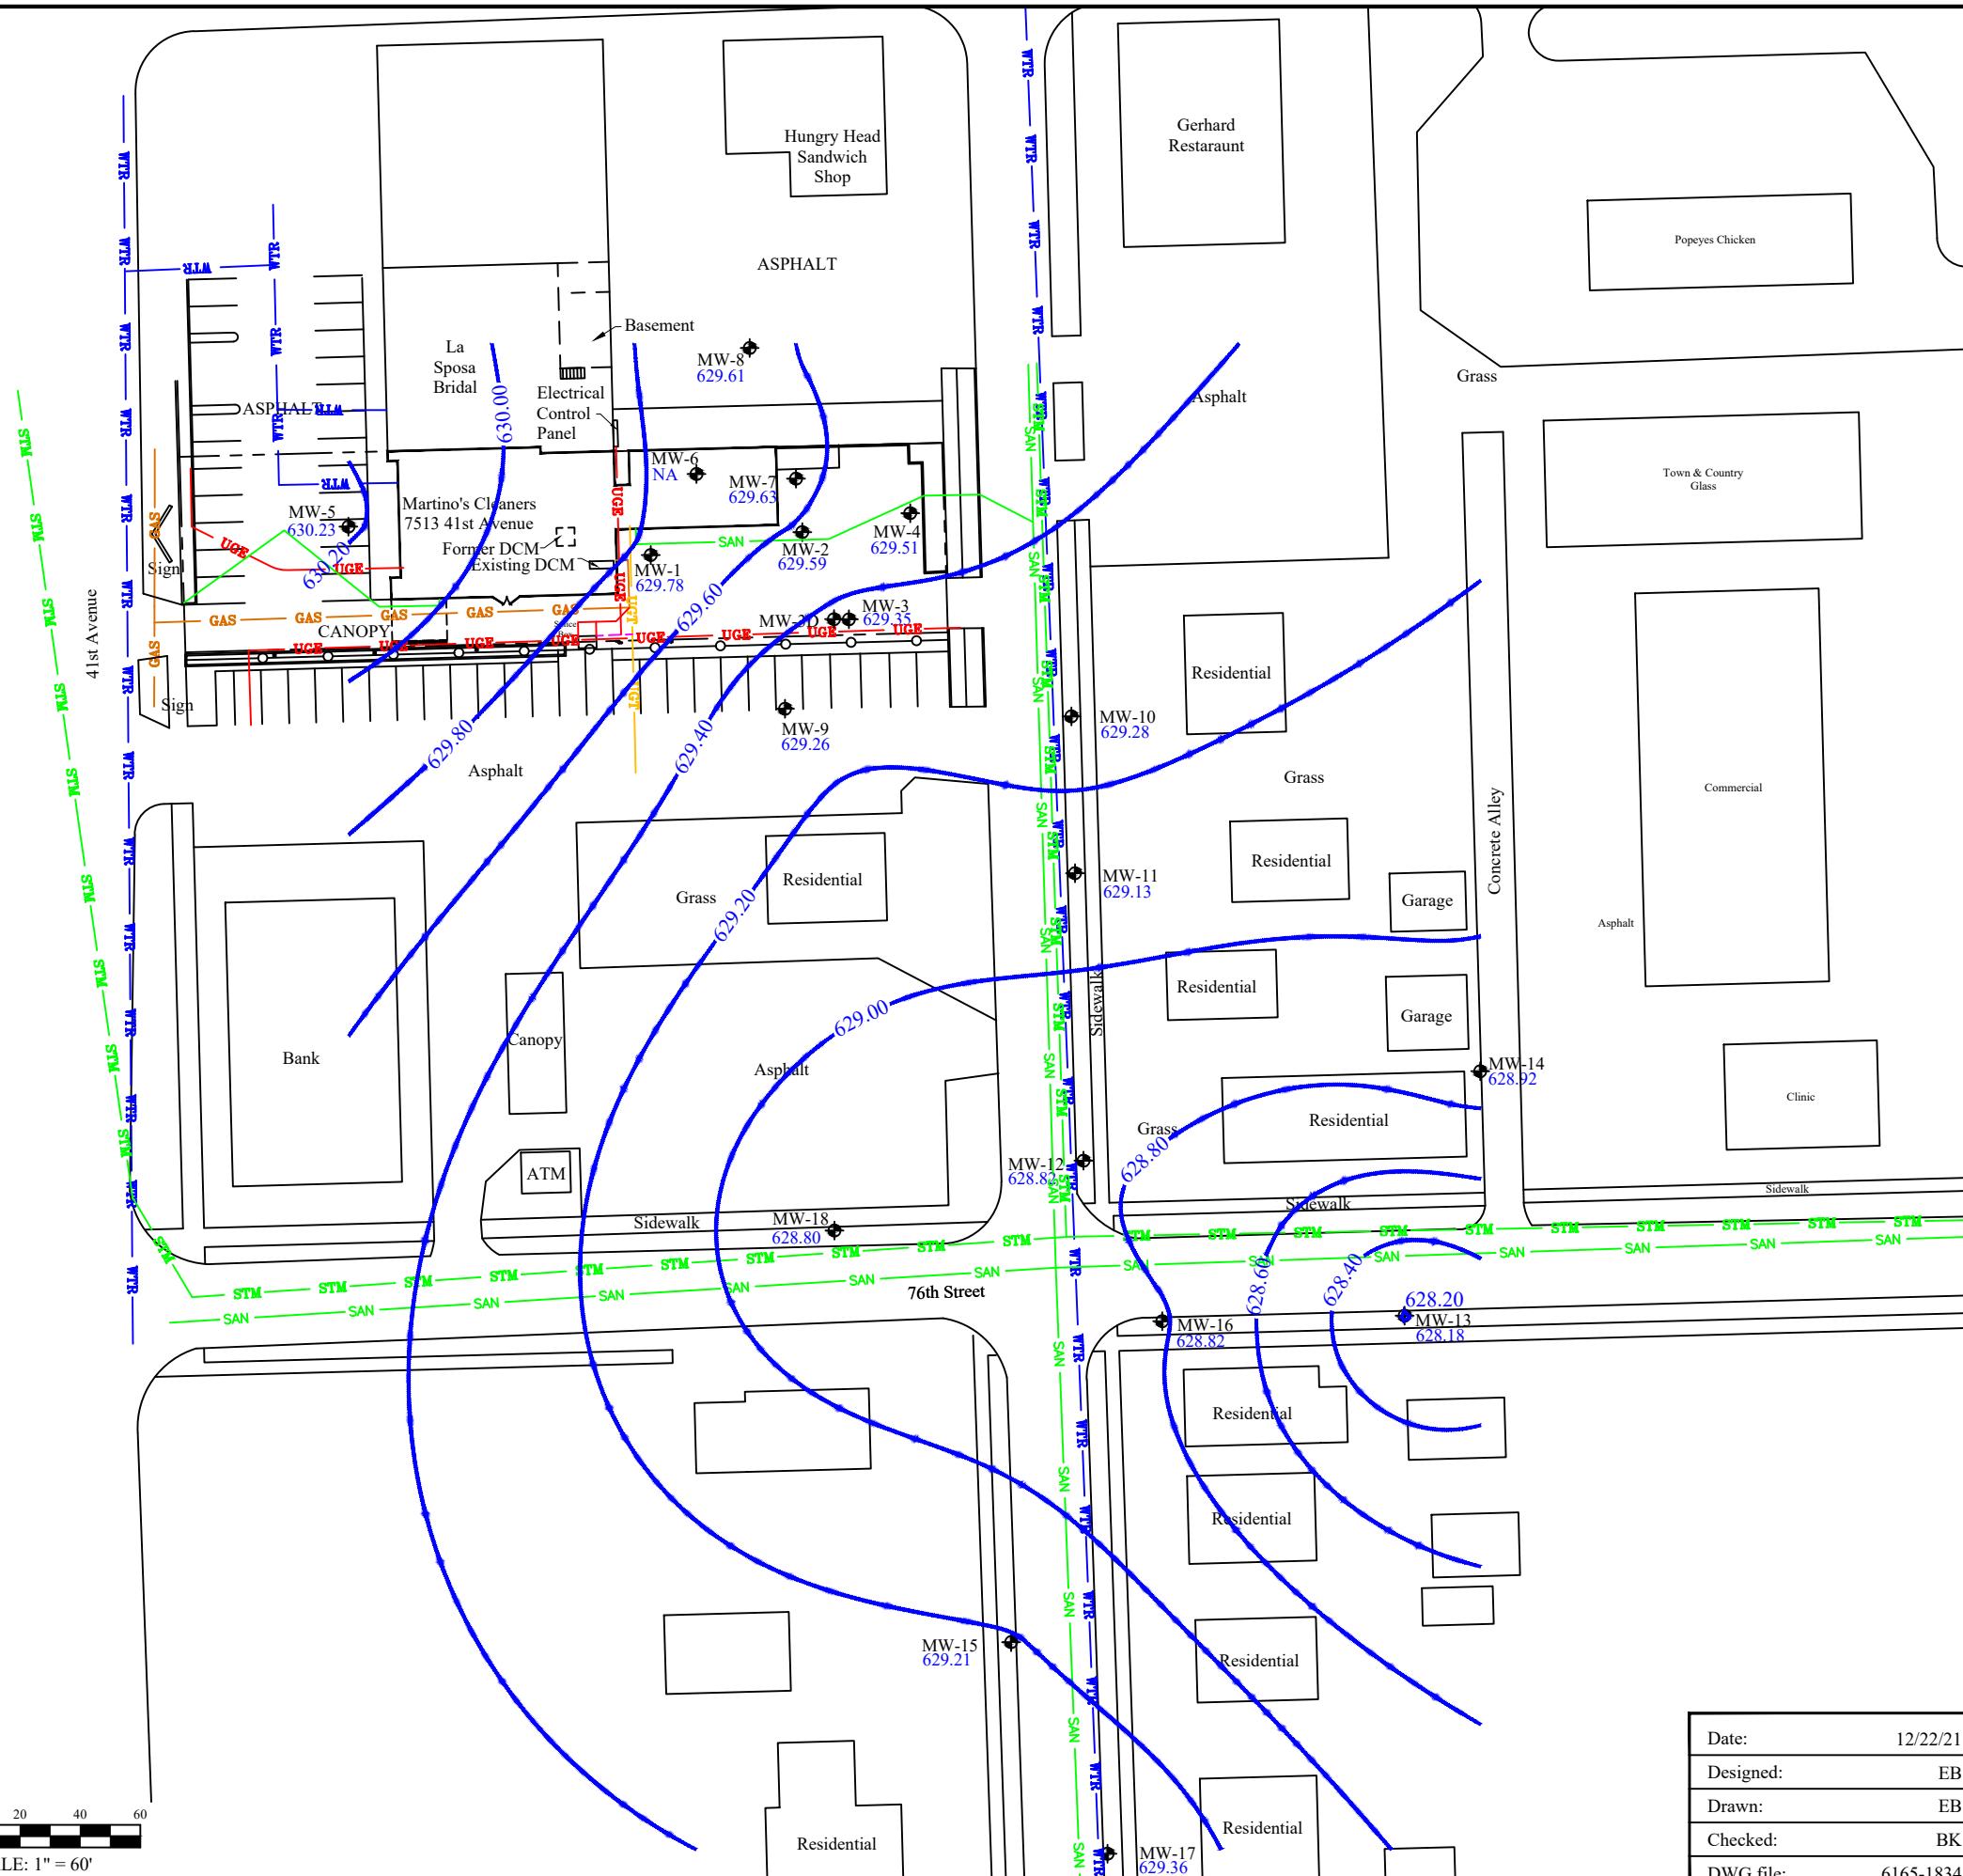

FIGURES

Legend

- Property boundary
- Fence line
- GAS** Underground gas utility line
- WTR** Underground water utility line
- SAN** Underground sanitary utility line
- STM** Underground storm utility line
- OVHD** Over head electrical utility line
- UGE** Underground electrical utility line
- UGT** Underground cable television utility line
- MW** Monitoring well location
- Groundwater elevation contour**
- Groundwater elevation (feet above mean sea level)**

Monitoring well location

Analytes	Public Health	
	Enforcement Standards	Preventive Action Limit
PCE	5	0.5
TCE	5	0.5
cis-1,2-DCE	70	7
trans-1,2-DCE	100	20
VC	0.2	0.02

Notes:

1. Bold, shaded orange values exceed Public Health Enforcement Standards
 2. Bold, shaded blue values exceed Public Health Preventive Action Limit
 3. Bold values equal or exceed laboratory detection limits
 4. Results not shown are below laboratory detection limits
 5. PCE = Tetrachloroethene
 6. TCE = Trichloroethene
 7. cis-1,2-DCE = cis-1,2-Dichloroethene
 8. trans-1,2-DCE = trans-1,2-Dichloroethene
 9. VC = Vinyl Chloride
 10. J = Analyte concentration detected between the Laboratory Reporting Limit and the laboratory Method Detection Limit
 11. ND = Compounds not detected
 12. NS = Not sampled
 13. CVOCs = Chlorinated Volatile Organic Compounds
- Extent of CVOCs impacts exceeding enforcement standards
