Subject: Imogenes report

Hi Ken, just read the report this morning, these are my comments, feel free to call me to discuss.

- Page 11, the last sentence of paragraph 4 is not finished? Can you tell me what it was supposed to say?
- Page 13, first sentence: I think that refers to Table **A.1.1**.
- Figures – Need for the offsite wells to be located with the proper scale. Would rather see a larger sheet (11x17) so all site details can be represented more accurately.
- Page 14, 5.1 – It says that the full-scale will proceed similar to the pilot, but the info prior (and subsequently) says a slower, less pressure, increased concentrations etc. was going to be implemented. Please clarify/modify.
- Page 15, first paragraph – Since it has been almost a year since the last groundwater sampling, I strongly recommend that all the monitoring wells be sampled prior to the full injection. Then followed by the proposed 4 rounds of semi-annual sampling. (adjust Section 6 schedule also)
- Table A...I think this is supposed to be one of those expanded DERF tables that is usually on an 11x17?? Or maybe it just looks cut off because there is no side border line. ??

Please submit a letter request for modification of the Injection Permit to Kevin McKnight. Include all details of changes in concentrations, chemicals, health/safety issues, etc. He will then make a decision whether a new injection permit (and fee) is needed or use an addendum to the current permit.

Send me a brief letter that addresses these issues and include the updated schedule/cost table from Section 6, and the signed Change order request.

Thanks Ken!

We are committed to service excellence.

Visit our survey at <http://dnr.wi.gov/customersurvey> to evaluate how I did.
