SUBJECT: Emerging Contaminant Scoping Statement

On March 10, 2021, REI Engineering Inc. submitted a closure request form which included a statement that based on the history of the Mosinee Cleaners site it was unlikely that emerging contaminants were used at the site. The WCR closure committee reviewed the closure request submittal on May 18, 2021 and deemed the scoping statement sufficient given the site history and the investigation which occurred prior to the site being granted closure.
