Follow Up Flag: Follow up
Flag Status: Flagged

Good morning, Janet

Our understanding was that the 30 cubic yards was associated with excavation for targeted contamination removal beyond any excavation/grading in that portion of the site required based on the proposed grading plan. The grading plan indicated limited cuts in this area (associated with the former drycleaning operations). So with the cuts for grading plus the targeted excavation (30 yards) the estimated volume going to landfill totaled 100 cubic yards.

Let us know if you need any additional clarification.

Hi Stephen,

WEDC received an application for a grant and contacted WDNR on this property. In the application, it states that 100 cubic yards of contaminated soils will be excavated and disposed of (at a landfill). In a conversation we had with Ayers, the developer, you, and the City in April, we discussed getting the most contaminated soils out and taking them to a subtitle D landfill. The estimate at that time was 30 cubic yards.

Can you explain the discrepancy? Thanks you.

We are committed to service excellence.

Visit our survey at <http://dnr.wi.gov/customersurvey> to evaluate how I did.
