Subject: Request for Approval of Emerald Park Landfill Soil Burrow Source Material Use
Connell Aluminum Properties, LLC (a.k.a. Former Wabash Alloys Facility)
9100 South 5th Avenue, Oak Creek, WI 53154
FID #: 241379050; BRRTS #: 06-41-560068 & 02-41-553761

Dear Mr. Kellogg:

The Department of Natural Resources (Department) has reviewed the submittal, *Request for Approval of Emerald Park Landfill Soil Burrow Source Material Use, Wabash Alloys, Oak Creek, WI*, dated June 20, 2013, prepared by Natural Resource Technology (NRT). The submittal presents: i) a brief burrow source information; ii) fill source analytical data for one sample collected; and iii) approval request for about 2,000 to 3,000 cubic yards of fill based on the one sample analytical result. The fill burrow source will be used to fill smaller pits within the building footprints of the former Wabash Alloys Facility, and is not being used as cap material. Observations of the soil conditions within the pit prior to backfilling will be noted. The burrow source information will be provided in the site investigation report also.

Based on the information provided, the Department requests the item below:

- Collect at least two additional representative soil samples for analytical testing or one representative soil sample per one thousand cubic yards of soil.

Please submit the requested information for our review and approval prior to bringing the fill onto the subject site.

The Department appreciates the efforts you are taking to restore the environment at this site. If you have any questions regarding this letter, please contact me at 414.263.8639.

Sincerely,

Eric Amadi - Hydrogeologist
