Subject: Update on call with Beazer

Hi Pam:

Today, we had a call with Beazer representatives and TetraTech. We discussed the need to define the source area, as well as delineation of the contamination. As a result of our phone call, Beazer agreed to have TetraTech prepare isoconcentration maps and cross-sections to illustrate the horizontal and vertical definition of the tar source areas and the delineation of the soil and groundwater contamination. These figures are required in a site investigation (SI) report. The cross-sections have not been updated since the 2014 SI report. Additional sampling has been completed and needs to be illustrated to show delineation and identify any potential data gaps.

Beazer and TetraTech plan to submit draft figures to the DNR on June 11. We have scheduled another call with Beazer and TetraTech on June 15 to review the figures.

Thanks.

Eric
