**Subject:** Luedtke Property SIR comments

Hi Jason, I just finished reviewing the SIR for Luedtke and have a few comments/recommendations.

- PZ-1 is showing impacts. It appears as though the plume is diving. (Benzene 7.6 then <2.2 ppb). I would recommend placing another MW/PZ nest to the North/Northwest; across W Wisconsin Ave to the west of GP-19. If there are no impacts then you can confirm the plume is defined.
- Please consider some source control such as carbon or RegenOx injections in the former UST and pump island locations. This would have bring down the contamination
- There are additional MWs that are not part of this investigation. I think they are associated with the Les Standard site. They should be labeled as such on all figures
- GP-20 has soil to GW RCL exceedances that are not reflected in the figure

If you have any questions, I am in all week, but off at 11AM on Friday. Thanks, Carrie
