Subject: May 2018 Groundwater Sampling Summary
Former Mankowski Property, 2600 50th Street, Kenosha, Wisconsin
BRRTS # 02-30-554934

Dear Ms. Billingsley,

AECOM conducted the first of four groundwater sampling events on May 23 and 24, 2018, as part of the semi-annual groundwater monitoring plan for 2018 and 2019 at the former Mankowski property (Property). The sampling was conducted as described in Task Order 125-051418 for the City of Kenosha (May 14, 2018). The purpose of this letter is to transmit the results of the May 2018 sampling event.

Site History

The Property (parcel number 09-222-36-134-003) is approximately 4 acres located north of 50th Street and west of 26th Avenue. The property was formerly part of a larger parcel previously owned by the Chrysler Corporation. The property is bounded to the north by an elementary school and residential properties to the east, south and west. The site location is depicted in Figure 1.

The Property was subject to a number of investigations and several focused remedial actions. After confirmatory soil borings with groundwater sampling indicated that contamination remained despite the remedial action, the WDNR conducted further investigation which identified several areas of chlorinated volatile organic compound impacts that necessitated further remediation. Soil remediation of these select areas was conducted in 2017. Groundwater monitoring is being conducted to evaluate if the groundwater contamination continues to be stable or are reducing as a result of the soil remediation.

Groundwater Sampling

During the May 2018 sampling event, 21 of the 23 planned groundwater monitoring wells/piezometers were sampled. Monitoring wells MW-16 and MW-18 were not able to be located at this time and were not sampled. Figure 2 depicts the site layout and monitoring well/piezometer locations.

Prior to sample collection, groundwater elevation measurements were collected from the monitoring wells and piezometers for the evaluation of groundwater flow at the Property. Depth to groundwater measurements and calculated elevations are provided in Table 1.

Groundwater samples were collected from the monitoring wells and piezometers using low-flow sampling techniques with a peristaltic pump and new tubing for each well. Field parameters, including pH,

conductivity, oxygen reducing potential, dissolved oxygen, and temperature, were measured during well purging and recorded following stabilization of each parameter. The field parameter measurements are included in Table 2.

Groundwater samples from the 21 wells were submitted to Pace Analytical Services, Inc. (Pace), in Green Bay, Wisconsin, and analyzed for volatile organic compounds (VOCs - SW846 Method 8260B).

Groundwater Results

Contoured groundwater elevations in the fill material from the May 2018 measurements depict groundwater flow to the east-northeast (Figure 3). The observed flow direction differs slightly from earlier groundwater contour maps from 2011 and 2012; but remains consistent with the flow direction determined by AECOM in 2016.

The groundwater analytical results were compared to Wisconsin Administrative Code Ch. NR 140.10, Table 1, Public Health Groundwater Quality Standards, and are summarized in Table 3 and depicted on Figure 4. Laboratory analytical reports are also attached. The lab data were validated for compliance with holding times and other quality control parameters. The duplicates were evaluated for precision and the sample results were with the acceptance criteria. A copy of the memo is attached.

Five chlorinated VOCs were detected above the PAL or ES; 1,1-dichloroethene (1,1-DCE), cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene and vinyl chloride. The wells with exceedances were:

<u>VOC</u>	<u>Wells Exceeding the ES</u>	<u>Wells Exceeding the PAL</u>
1,1-Dichloroethene	PZ-9	MW-19 and MW-19D
Cis-1,2-Dichloroethene	MW-9R, PZ-9, MW-19, MW-19D, MW-20, MW-21, MW-22, MW-23, MW-26, MW-27 and MW-27D	MW-18, MW-25 and SMW-2
Trans-1,2-Dichloroethene	MW-9R and PZ-9	MW-19D, MW-21 and MW-27
Trichloroethene	MW-9R, PZ-9, MW-9B, MW-19, MW-19D, MW-21, MW-23, MW-24, MW-25, MW-27, MW-27D and SMW-2	MW-26 and SMW-3
Vinyl chloride	MW-9R, PZ-9, MW-19, MW-19D, MW-20, MW-21, MW-22, MW-23, MW-25, MW-27, and MW-27D	No exceedances

(D is for duplicate)

Groundwater analytical data from the May 2018 sampling event is similar to previous groundwater sampling events completed at the Property. Enforcement Standard (ES) exceedances for VOCs were detected in 14 of the 21 sample locations near the center of the Property. Preventive Action Limit (PAL) exceedances for VOCs were detected in the same 14 locations as the ES exceedances and at one additional location (SMW-3). The extent of VOC groundwater plume is similar to what was identified previously. VOCs were not detected in downgradient monitoring wells MW-14R and MW-15.

Conclusions

The groundwater plume at this time appears to be stable. Further evaluation will be conducted with the future events.

Please contact us if you have questions about this letter.

Yours sincerely,

Notes:

DCE - Dichloroethene

µg/L = micrograms per liter

NPD - Not previously detected (historic data from prior consultants)

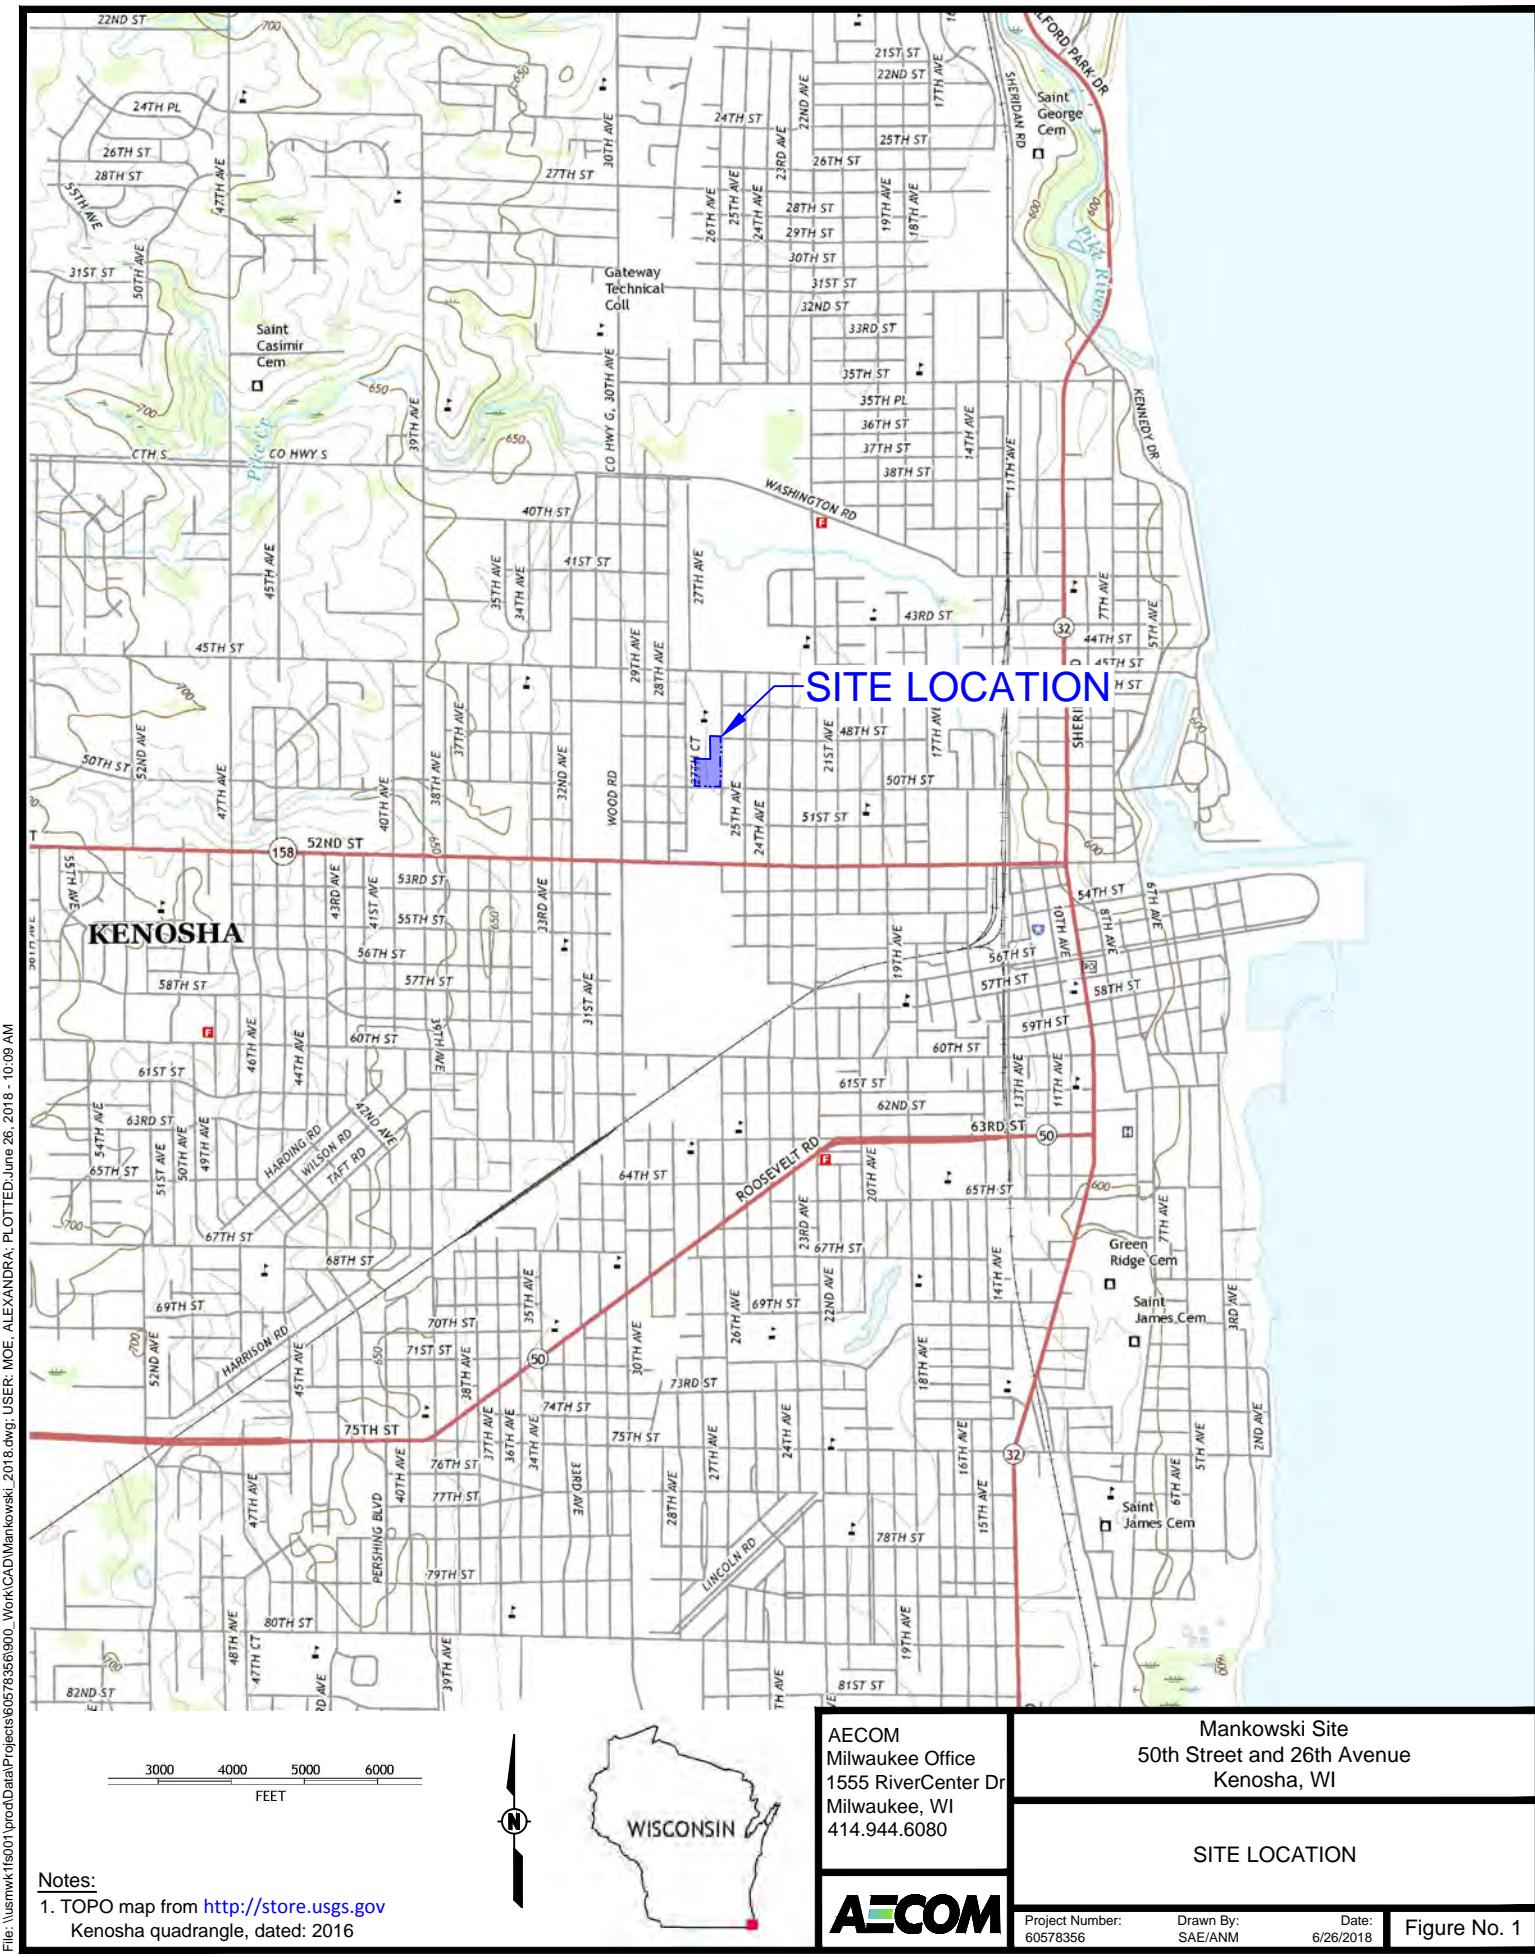

^J - Estimated concentration between reporting limit and method detection limit.

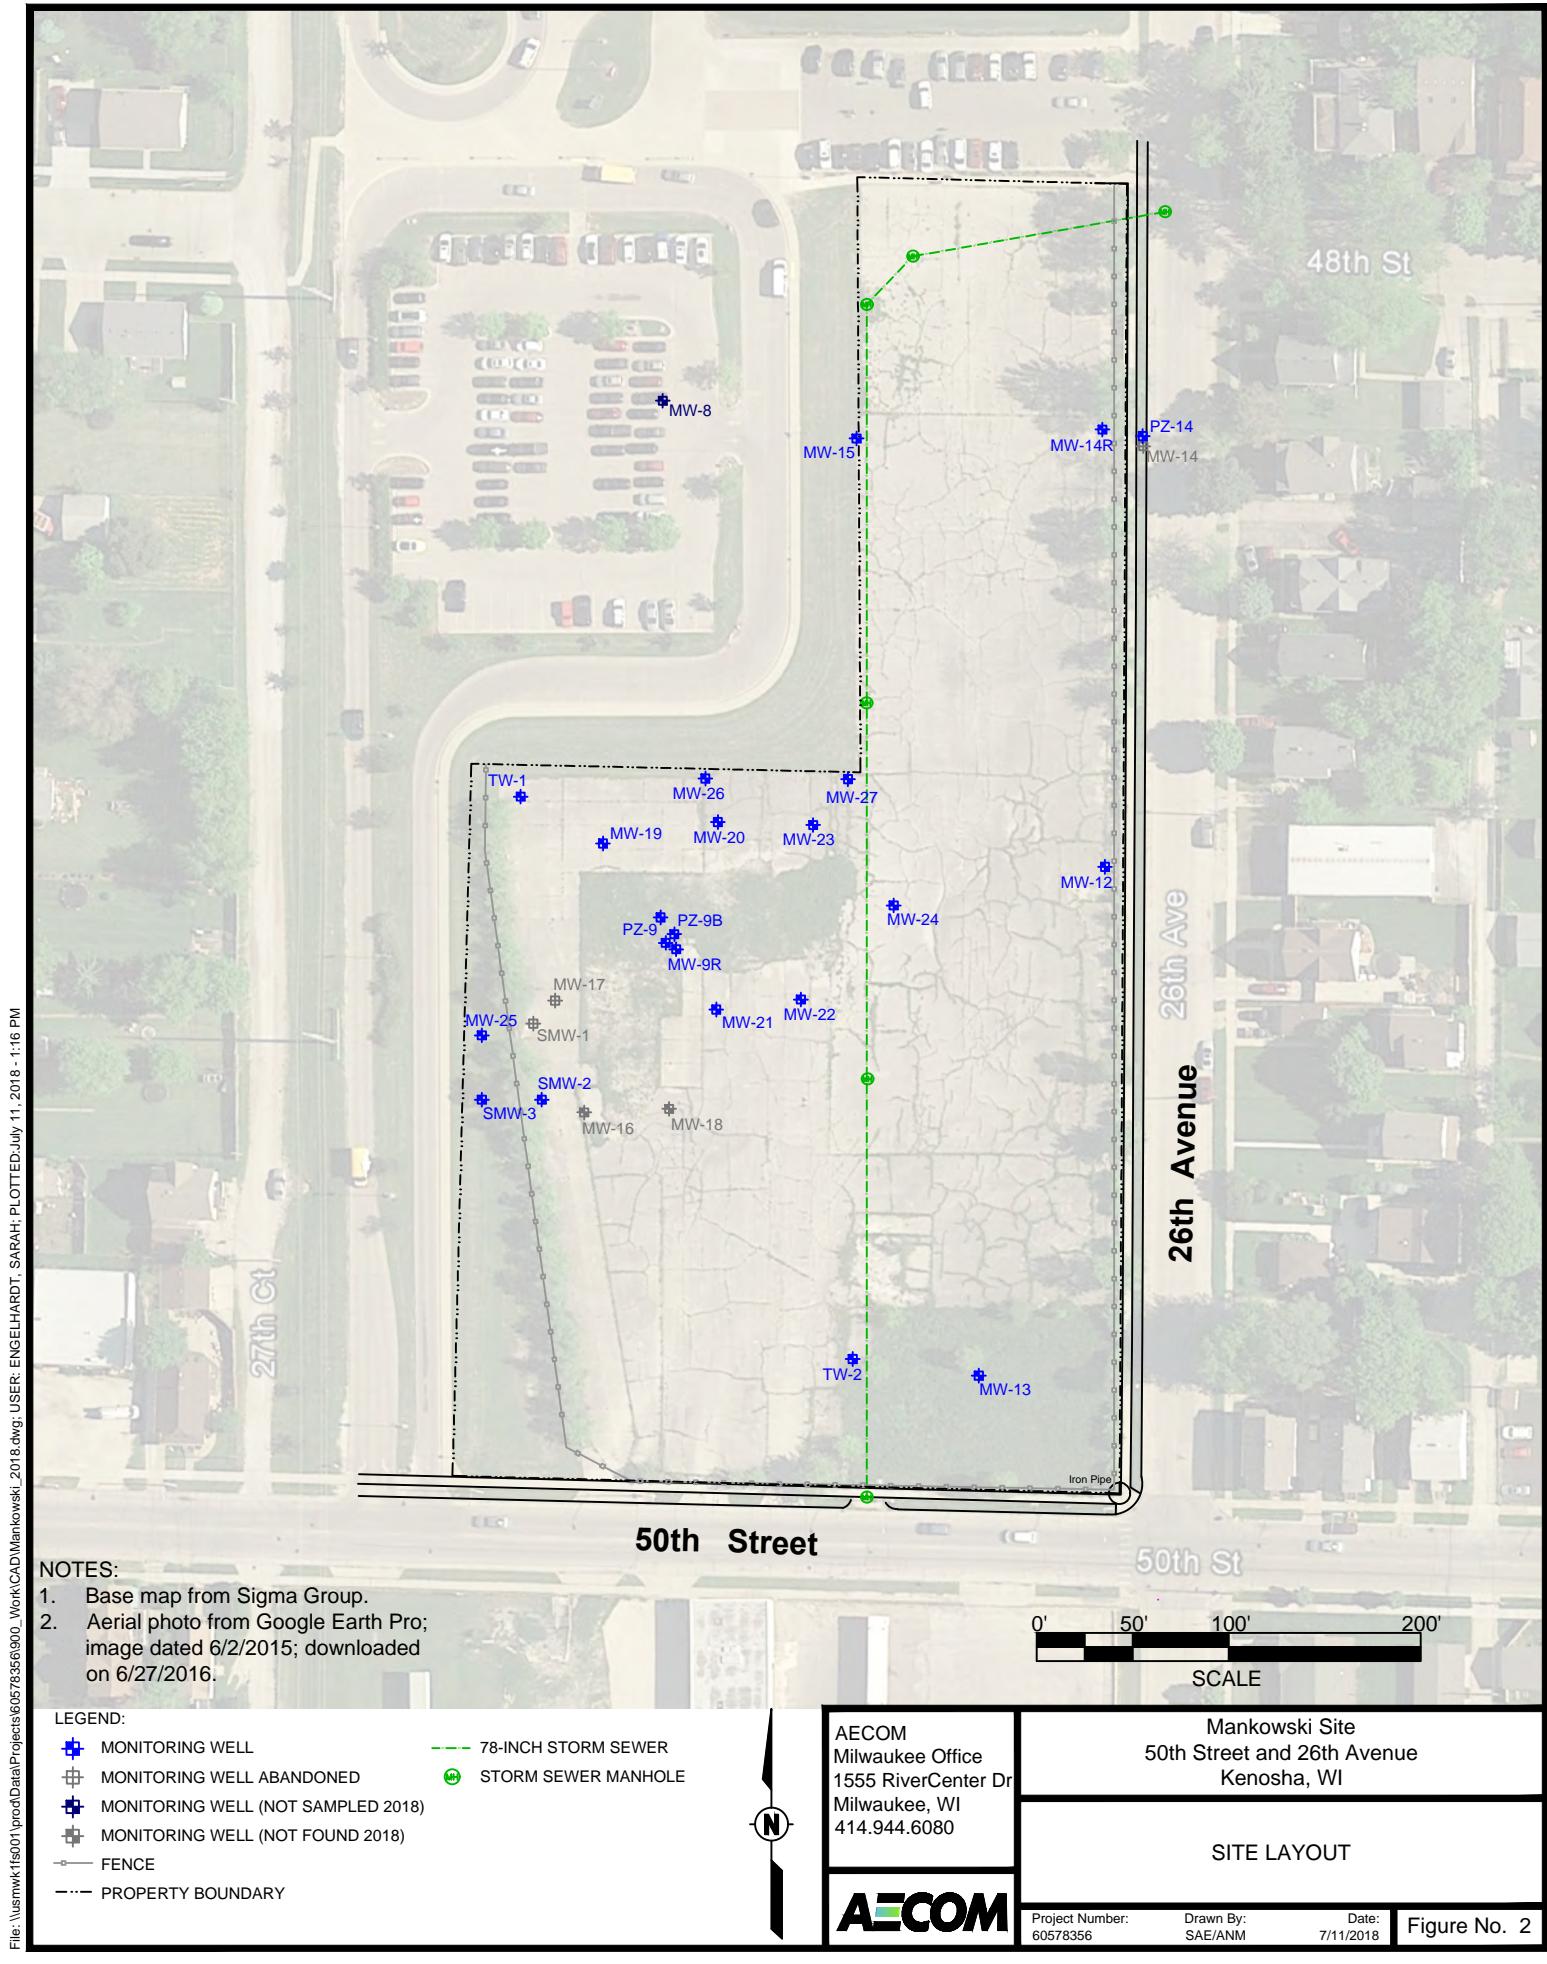

NR 140 ES = Wisconsin Administrative Code, Chapter NR 140 Enforcement Standard, February 2017, Exceedances are **Bold**.

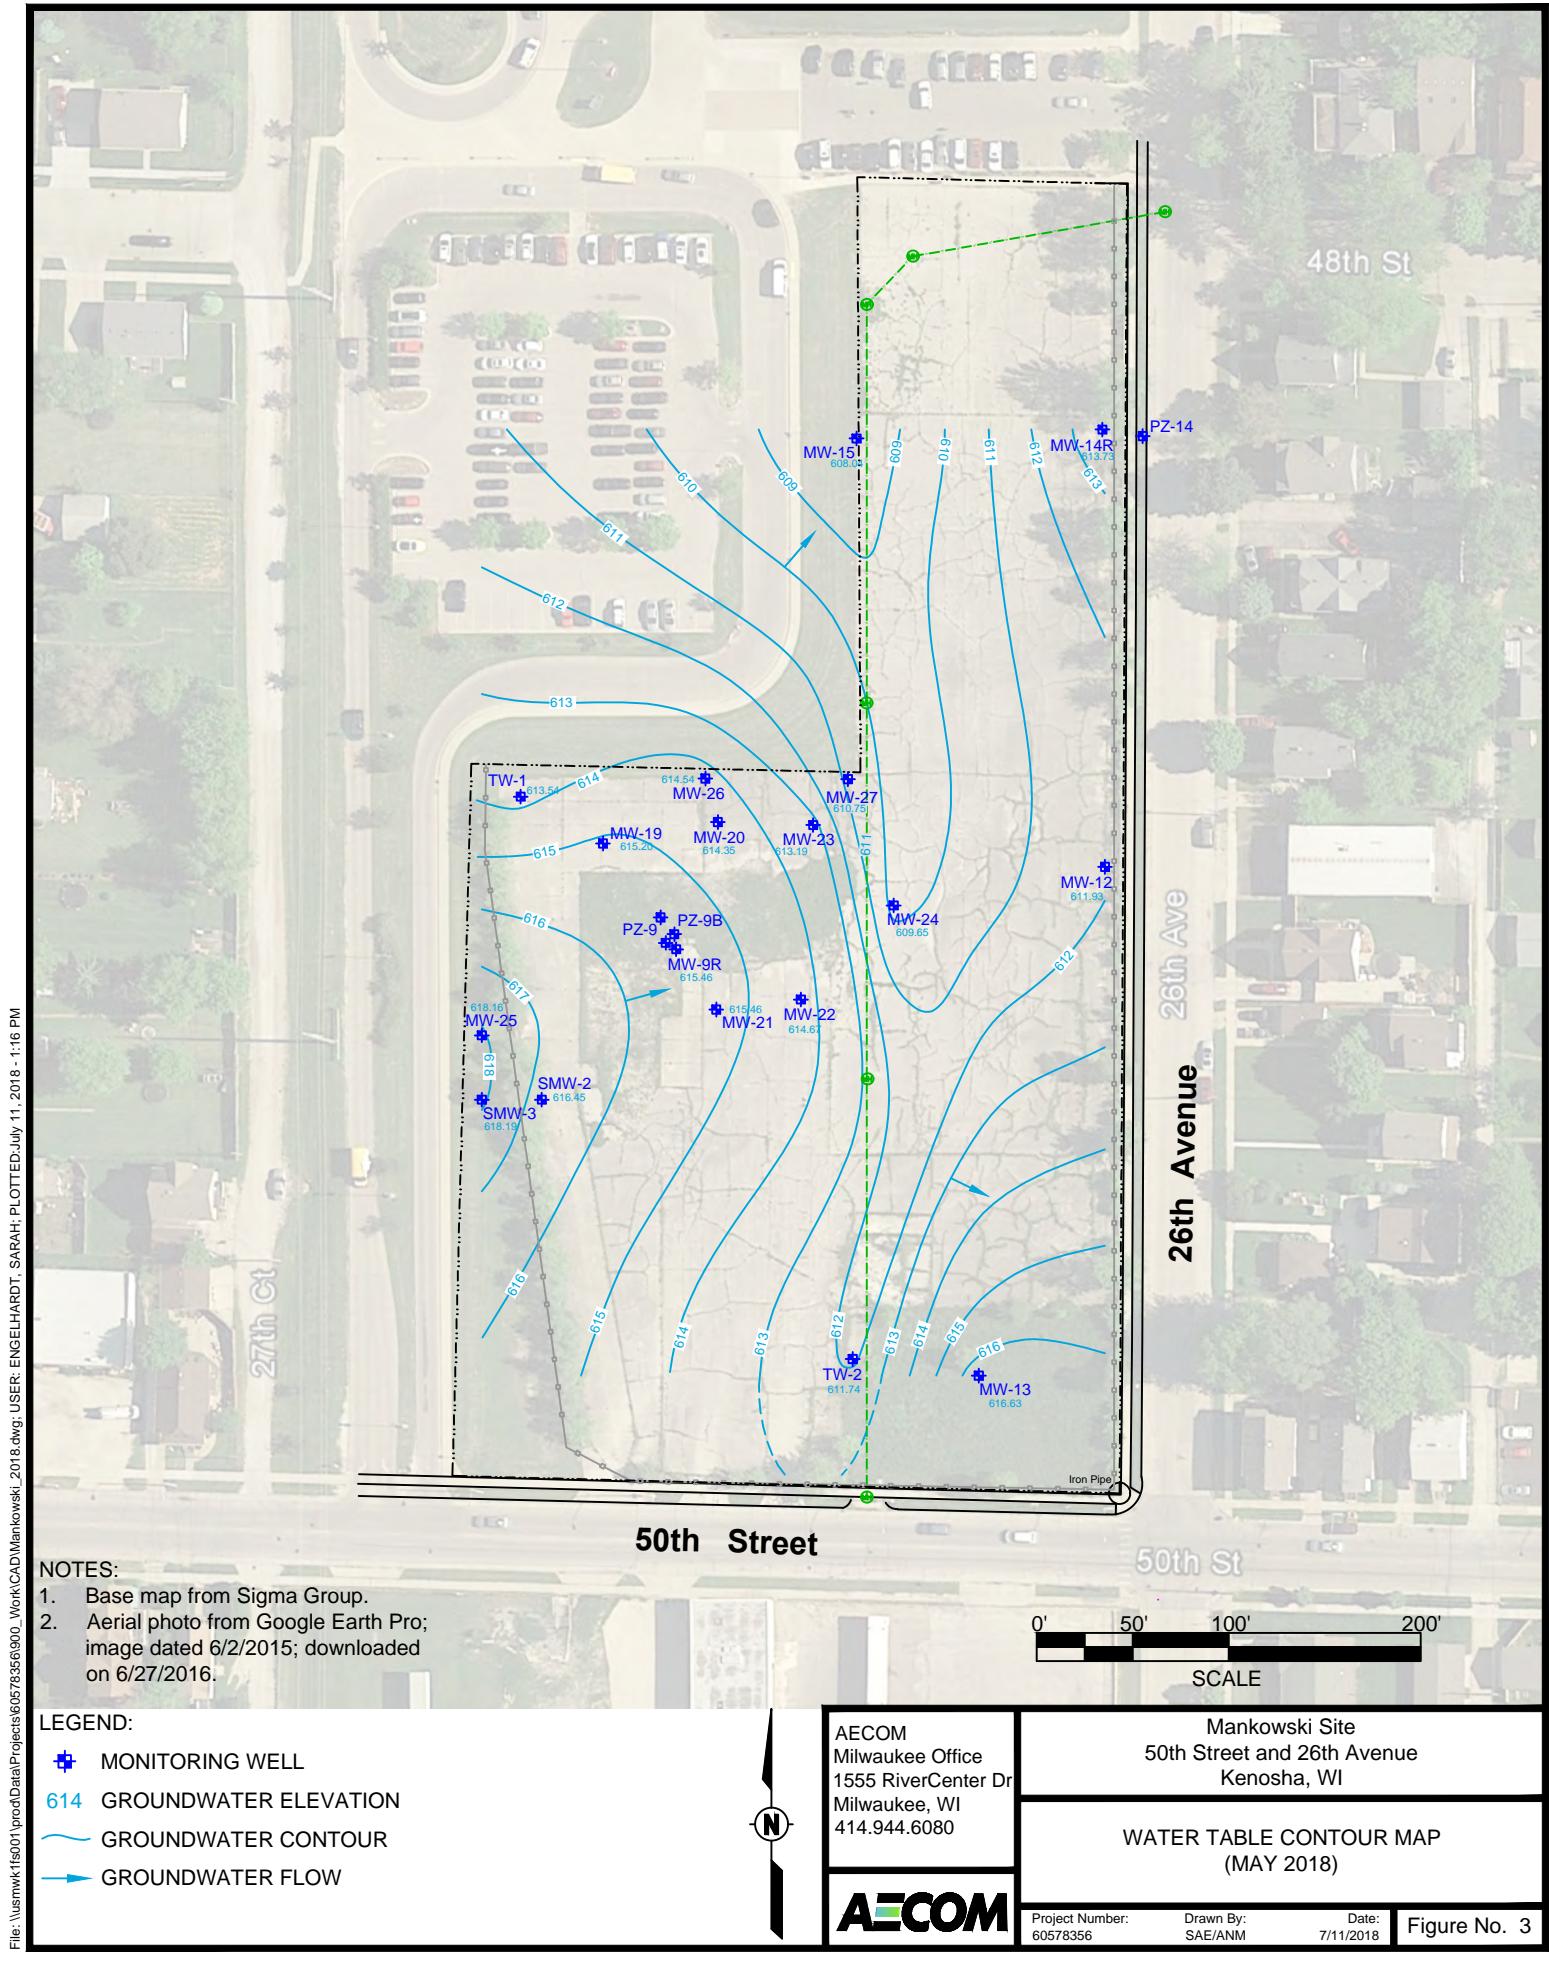

NR 140 PAL = Wisconsin Administrative Code, Chapter NR 140 Preventive Action Limit, February 2017, Exceedances are *Underlined Italics*.

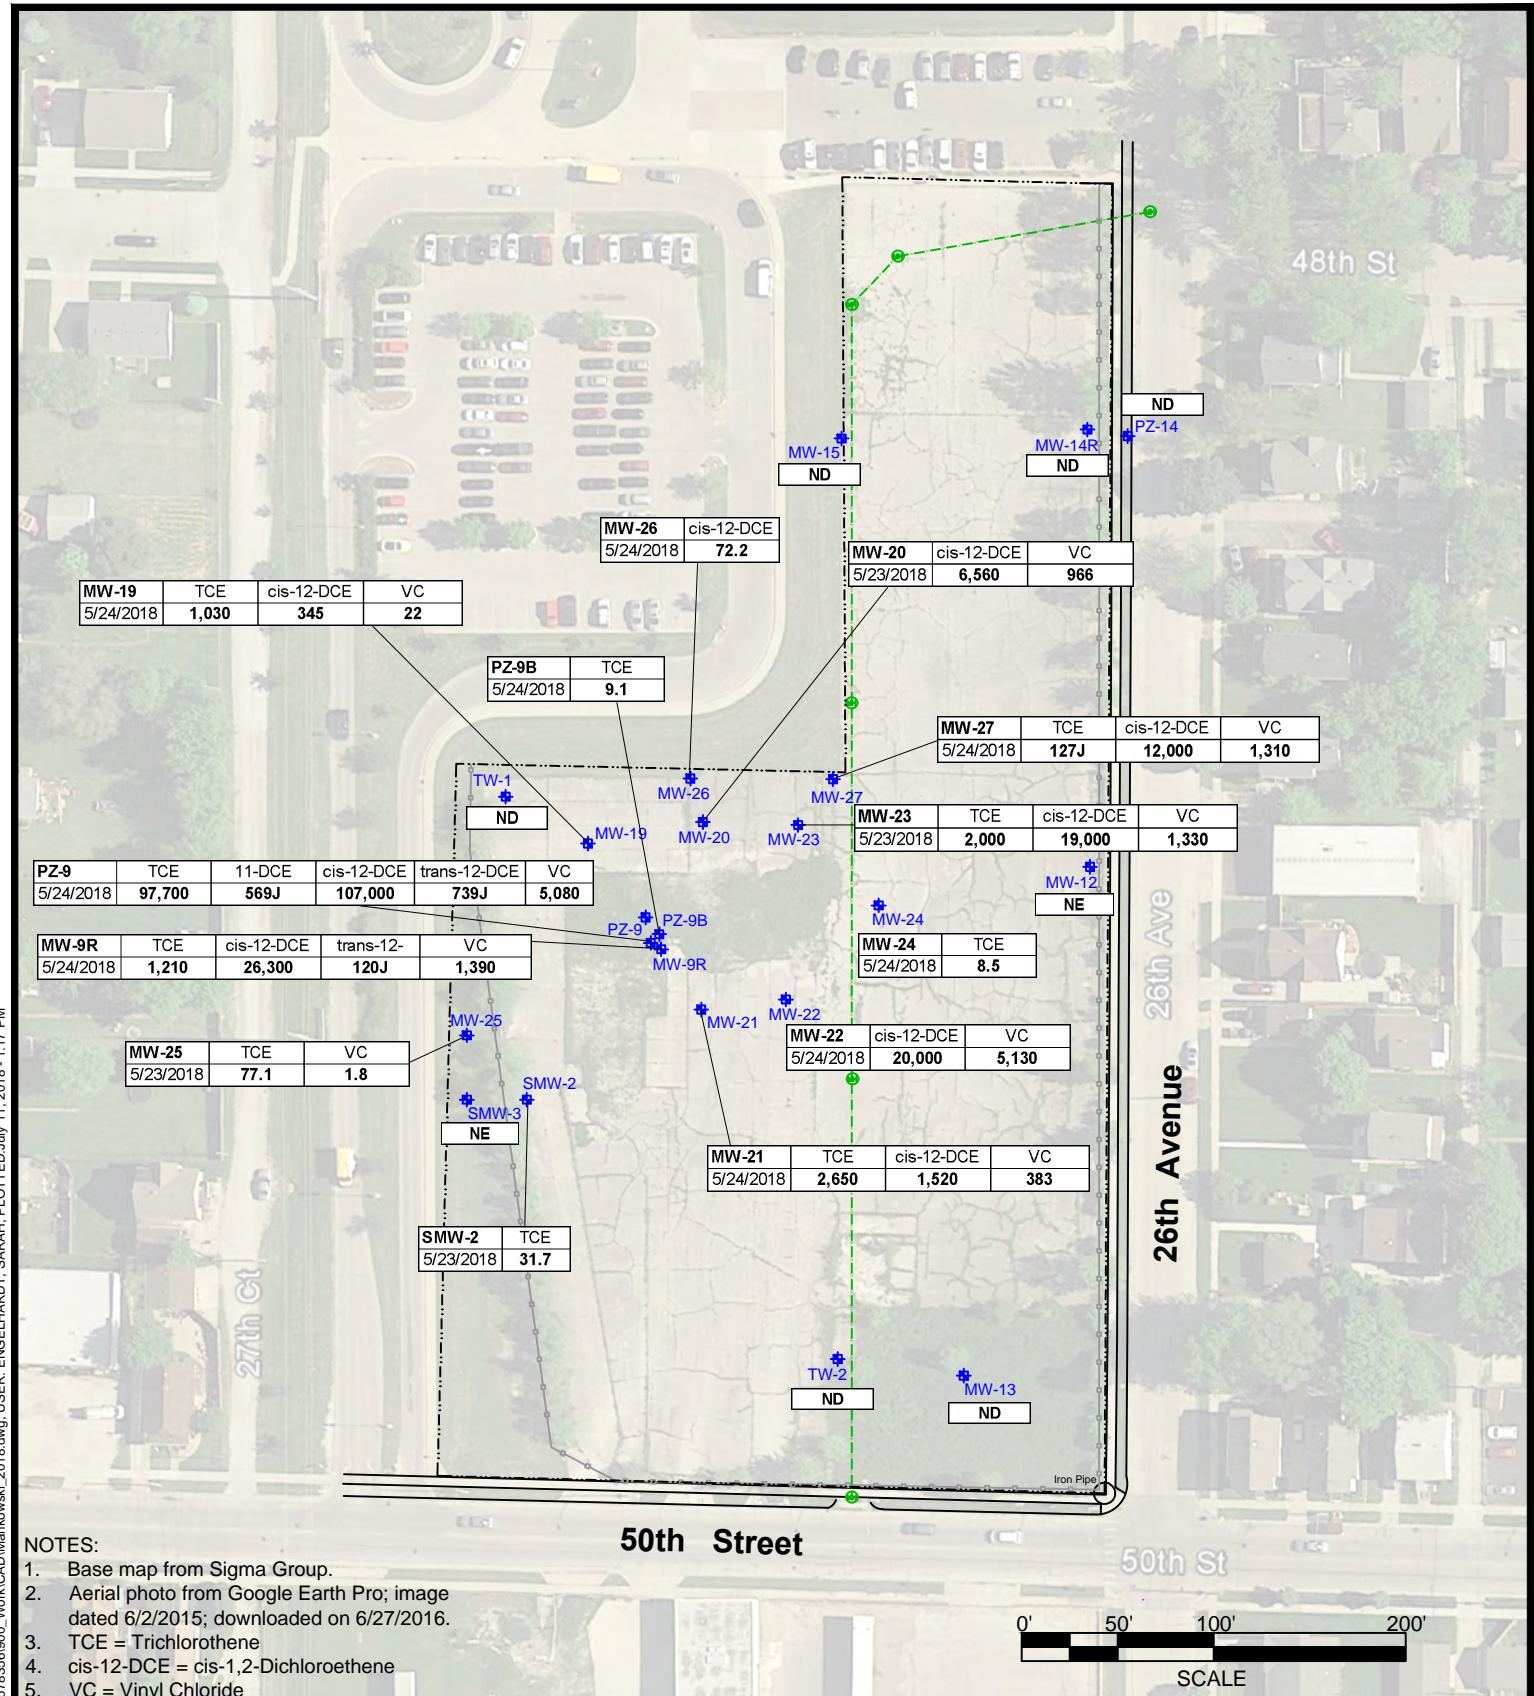

Exceedances: BOLD = concentration exceeds Chapter NR 140 PAL

Data prior to 2016 was collected by prior consultants and the data quality/data quality qualifiers are carried over from prior reports.

RE: Project: 60578356 MANKOWSKI
Pace Project No.: 40169860

Dear Lanette Altenbach:

Enclosed are the analytical results for sample(s) received by the laboratory on May 25, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: 60578356 MANKOWSKI
Pace Project No.: 40169860

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

WORKORDER QUALIFIERS

WO: 40169860

[1] Revised report per client to correct client ID for two samples that were switched in the field(013 & 024). IDs have been updated as PZ-9 for 40169860013 and PZ-9B for 40169860024.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

From: Lisa Smith, Environmental Chemist (CEAC)

Subject: Data Validation - Analytical Groundwater Results for May 2018
Mankowski Property, 2600 50th Street
Kenosha, Wisconsin

SUMMARY

Data validation was performed on the analytical results of the groundwater samples collected for volatile organic compounds (VOCs) as listed in Table 1 below. The samples were collected at the Kenosha WI site on May 24 and 25, 2018. Groundwater samples were submitted to Pace Analytical, Green Bay for analysis. Pace processed the samples and reported the results under sample delivery group (SDG) 40169860.

The analytical data were evaluated with reference to the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review (January 2017). The National Functional Guidelines were modified to accommodate the non-CLP methodology. Laboratory control limits and/or method criteria were used as appropriate as the basis for validation actions.

Based on the results of the validation, the data are valid as reported and may be used for decision making purposes. Results did not require qualification due to QC exceedances. Results reported below the limit of quantitation (LOQ) were qualified as estimated (J) by the laboratory; qualifications of these results were accepted by the Validator.

METHODS

The samples were analyzed by the methods listed below.

- SW-846 8260 – Volatile Organic Compounds (VOCs) by Gas Chromatography/Mass Spectrometry (GC/MS)

SAMPLES

The samples included in this review are listed below.

Table 1 - Sample Summary
Kenosha Mankowski Property Groundwater Samples

REVIEW ELEMENTS

A limited data validation was performed on the samples. Quality control (QC) parameters listed below were reviewed, if applicable to the methodology.

Limited Validation

Holding Time
 Method Blanks
 Trip Blanks
 Surrogate Recoveries
 Laboratory Control Sample/Laboratory Control Sample Duplicates
 Matrix Spikes/Matrix Spike Duplicates
 Quantitation Limits
 Field Duplicates

DISCUSSION

Sample Receipt

Samples were received at the laboratory intact, properly preserved and in good condition. The groundwater samples were received on ice. It was determined that samples PZ-9 and PZ-9B were switched in the field. The chain of custody (CoC) was updated, and the laboratory correctly documented the update in the qualifier section.

Holding Times

Samples were analyzed within holding time.

Method Blanks

Laboratory blanks are analyzed to assess contamination from laboratory procedures. Method blanks were analyzed at the correct frequency. Compounds were not detected in the associated method blanks.

Trip Blanks

Trip blanks are used to assess contamination from sample shipping. One trip blank was associated with the sample shipment. Compounds were not detected in the trip blank.

Surrogate Recoveries

Surrogates are spiked into all field samples, field QC samples, and method QC samples and are used to evaluate accuracy. The surrogates are organic compounds similar to the target compounds in chemical composition and behavior in the analytical process, but are not usually found in environmental samples. Surrogate recoveries were within the laboratory specified QC limits.

Laboratory Control Samples (LCSs)

LCSs are analyzed to monitor the accuracy and precision of the analytical method independent of matrix effects. The LCS recoveries were within the laboratory specified QC limits.

Matrix Spike/Matrix Spike Duplicates (MS/MSDs)

MS/MSDs are analyzed to determine the effects of sample matrix on the measurement methodology. MS/MSD data were provided from batch analysis. Sample MW-20 was analyzed as an MS/MSD as indicated in Table 1. MS/MSD recoveries were within the laboratory specified QC limits, with the exception of those identified in bold in the table below. Relative percent differences (RPDs) were within the laboratory specified QC limits.

Sample Spiked	Compound	MS/MSD Recovery	Recovery Limits	Results Qualified
MW-20	1,2-Dichloropropane	123/120	80-120	The results for MW-20 were nondetect and were acceptable without qualification.
	Chloromethane	115/ 129	40-128	

Quantitation

Samples required dilution due to high analyte concentrations. The dilutions were required to bring the sample concentrations within the instrument calibration range and were appropriate.

Field Duplicates

Field duplicates are collected to assess the overall precision of field sampling and laboratory analysis. Field duplicate precision is summarized below. RPDs were within the 30 percent limit for groundwater and were acceptable.

Field Duplicate Results

Compound	Units	LOQ	Sample Concentration	Field Duplicate Concentration	RPD (%)
MW-19/MW-19-DUP:					
1,1-Dichloroethene	ug/L	10.0	5.4 J	4.2 J	25
cis-1,2-Dichloroethene	ug/L	10.0	345	369	6.7
trans-1,2-Dichloroethene	ug/L	10.0	17.0	22.3	27.0
Trichloroethene	ug/L	10.0	1030	1190	14.4
Vinyl chloride	ug/L	10.0	22.2	26	15.8
MW-27/MW-27-DUP:					
cis-1,2-Dichloroethene	ug/L	200	12000	12600	4.9
trans-1,2-Dichloroethene	ug/L	200	51.8 J	<64.1	--
Trichloroethene	ug/L	200	127 J	151 J	17.3
Vinyl chloride	ug/L	200	1310	1310	0.0
