**Subject: November 2018 Groundwater Sampling Summary
Former Mankowski Property, 2600 50th Street, Kenosha, Wisconsin
BRRTS # 02-30-554934**

Dear Ms. Billingsley,

AECOM conducted the first of four groundwater sampling events on November 7 and 8, 2018, as part of the semi-annual groundwater monitoring plan for 2018 and 2019 at the former Mankowski property (Property). The sampling was conducted as described in Task Order 125-051418 for the City of Kenosha (May 14, 2018). The purpose of this letter is to transmit the results of the November 2018 sampling event.

Site History

The Property (parcel number 09-222-36-134-003) is approximately 4 acres located north of 50th Street and west of 26th Avenue. The property was formerly part of a larger parcel previously owned by the Chrysler Corporation. The property is bounded to the north by an elementary school and residential properties to the east, south and west. The site location is depicted in Figure 1.

The Property was subject to a number of investigations and several focused remedial actions. After confirmatory soil borings with groundwater sampling indicated that contamination remained despite the remedial action, the WDNR conducted further investigation which identified several areas of chlorinated volatile organic compound impacts in the vadose zone for remediation. Soil treatment and removal in these areas was conducted in 2017. Groundwater monitoring is being conducted to evaluate if the groundwater contamination continues to be stable or are reducing as a result of the soil remediation.

Groundwater Sampling

During the November 2018 sampling event, 21 of the 23 planned groundwater monitoring wells/piezometers were sampled. Monitoring wells MW-16 and MW-18 were not located at this time and were not sampled. Figure 2 depicts the site layout and monitoring well/piezometer locations.

Prior to sample collection, groundwater elevation measurements were collected from the monitoring wells and piezometers for the evaluation of groundwater flow at the Property. Depth to groundwater measurements and calculated elevations are provided in Table 1.

Groundwater samples were collected from the monitoring wells and piezometers using low-flow sampling techniques with a peristaltic pump and new tubing for each well. Field parameters, including pH, conductivity, oxygen reducing potential, dissolved oxygen, and temperature, were measured during well purging and recorded following stabilization of each parameter. The field parameter measurements are included in Table 2.

Groundwater samples from the 21 wells were submitted to Pace Analytical Services, Inc. (Pace), in Green Bay, Wisconsin, and analyzed for volatile organic compounds (VOCs - SW846 Method 8260B).

Groundwater Results

Contoured groundwater elevations in the fill material from the November 2018 measurements depict groundwater flow to the east-northeast (Figure 3). The observed flow direction differs slightly from earlier groundwater contour maps from 2011 and 2012; but remains consistent with the flow direction determined by AECOM in 2016 and the May 2018 sampling event.

The groundwater analytical results were compared to Wisconsin Administrative Code Ch. NR 140.10, Table 1, Public Heath Groundwater Quality Standards, and are summarized in Table 3 and depicted on Figure 4. Laboratory analytical reports are also attached. The lab data were validated for compliance with holding times and other quality control parameters. The duplicates were evaluated for precision and the sample results were with the acceptance criteria. A copy of the memo is attached.

Five chlorinated VOCs were detected above the PAL or ES; 1,1-dichloroethene (1,1-DCE), cis-1,2-dichloroethene (cis-DCE), trans-1,2-dichloroethene (trans-DCE), trichloroethene (TCE) and vinyl chloride (VC). The wells with exceedances were:

<u>VOC</u>	<u>Wells Exceeding the ES</u>	<u>Wells Exceeding the PAL</u>
1,1-Dichloroethene	PZ-9	MW-19, MW-20, and MW-21
Cis-1,2-Dichloroethene	MW-9R, PZ-9, MW-19, MW-20, MW-21, MW-22, MW-23, and MW-27	PZ-9B, MW-25, MW-26, and SMW-2
Trichloroethene	MW-9R, PZ-9, PZ-9B, MW-19, MW-21, MW-23, MW-24, MW-25, MW-27, and SMW-2	MW-26, SMW-3 and TW-2
Vinyl chloride	MW-9R, PZ-9, MW-19, MW-20, MW-21, MW-22, MW-23, MW-25, MW-26, and MW-27	No exceedances

Groundwater analytical data from the November 2018 sampling event is similar to previous groundwater sampling events completed at the Property. Enforcement Standard (ES) exceedances for VOCs were detected in 12 of the 21 wells, near the center of the Property. Preventive Action Limit (PAL) exceedances for VOCs were detected in seven of the same locations as the ES exceedances and at two additional locations (SMW-3 and TW-2). The extent of VOC groundwater plume is similar to what was identified previously. TCE was detected below standards and at an estimated value between the reporting limit and method detection limit, in downgradient monitoring well MW-15. VOCs were not detected in downgradient monitoring well MW-14R.

The overall relationship between TCE concentrations and groundwater elevations was assessed at three monitoring wells (MW-9R, MW-19 and MW-21) and one piezometer (PZ-9). Figures 5 through 8 depict TCE concentrations and groundwater elevations over time. A linear trend line has been added to each TCE concentration graph. TCE appears to be stable or decreasing at the monitoring well locations and increasing at the piezometer location. Soil remediation was completed in 2017 to remove the source of contamination, and TCE concentrations will be monitored during future sampling events.

Conclusions

The overall groundwater plume appears to be stable although TCE was detected below the PAL in MW-15 (downgradient to the northeast and previously not detected) and in TW-2 above the PAL (downgradient and to the southeast). Further evaluation will be conducted with the future groundwater sampling events.

Please contact us if you have questions about this letter.

Yours sincerely,

AECOM Technical Services, Inc.

Notes: Pre-2012 data with a value of 0 reported for the concentration was provided in that format from the prior consultants. Original lab data not available to verify results.

DCE - Dichloroethene

NPD - Not previously detected (historic data from prior consultants)

µg/L = micrograms per liter

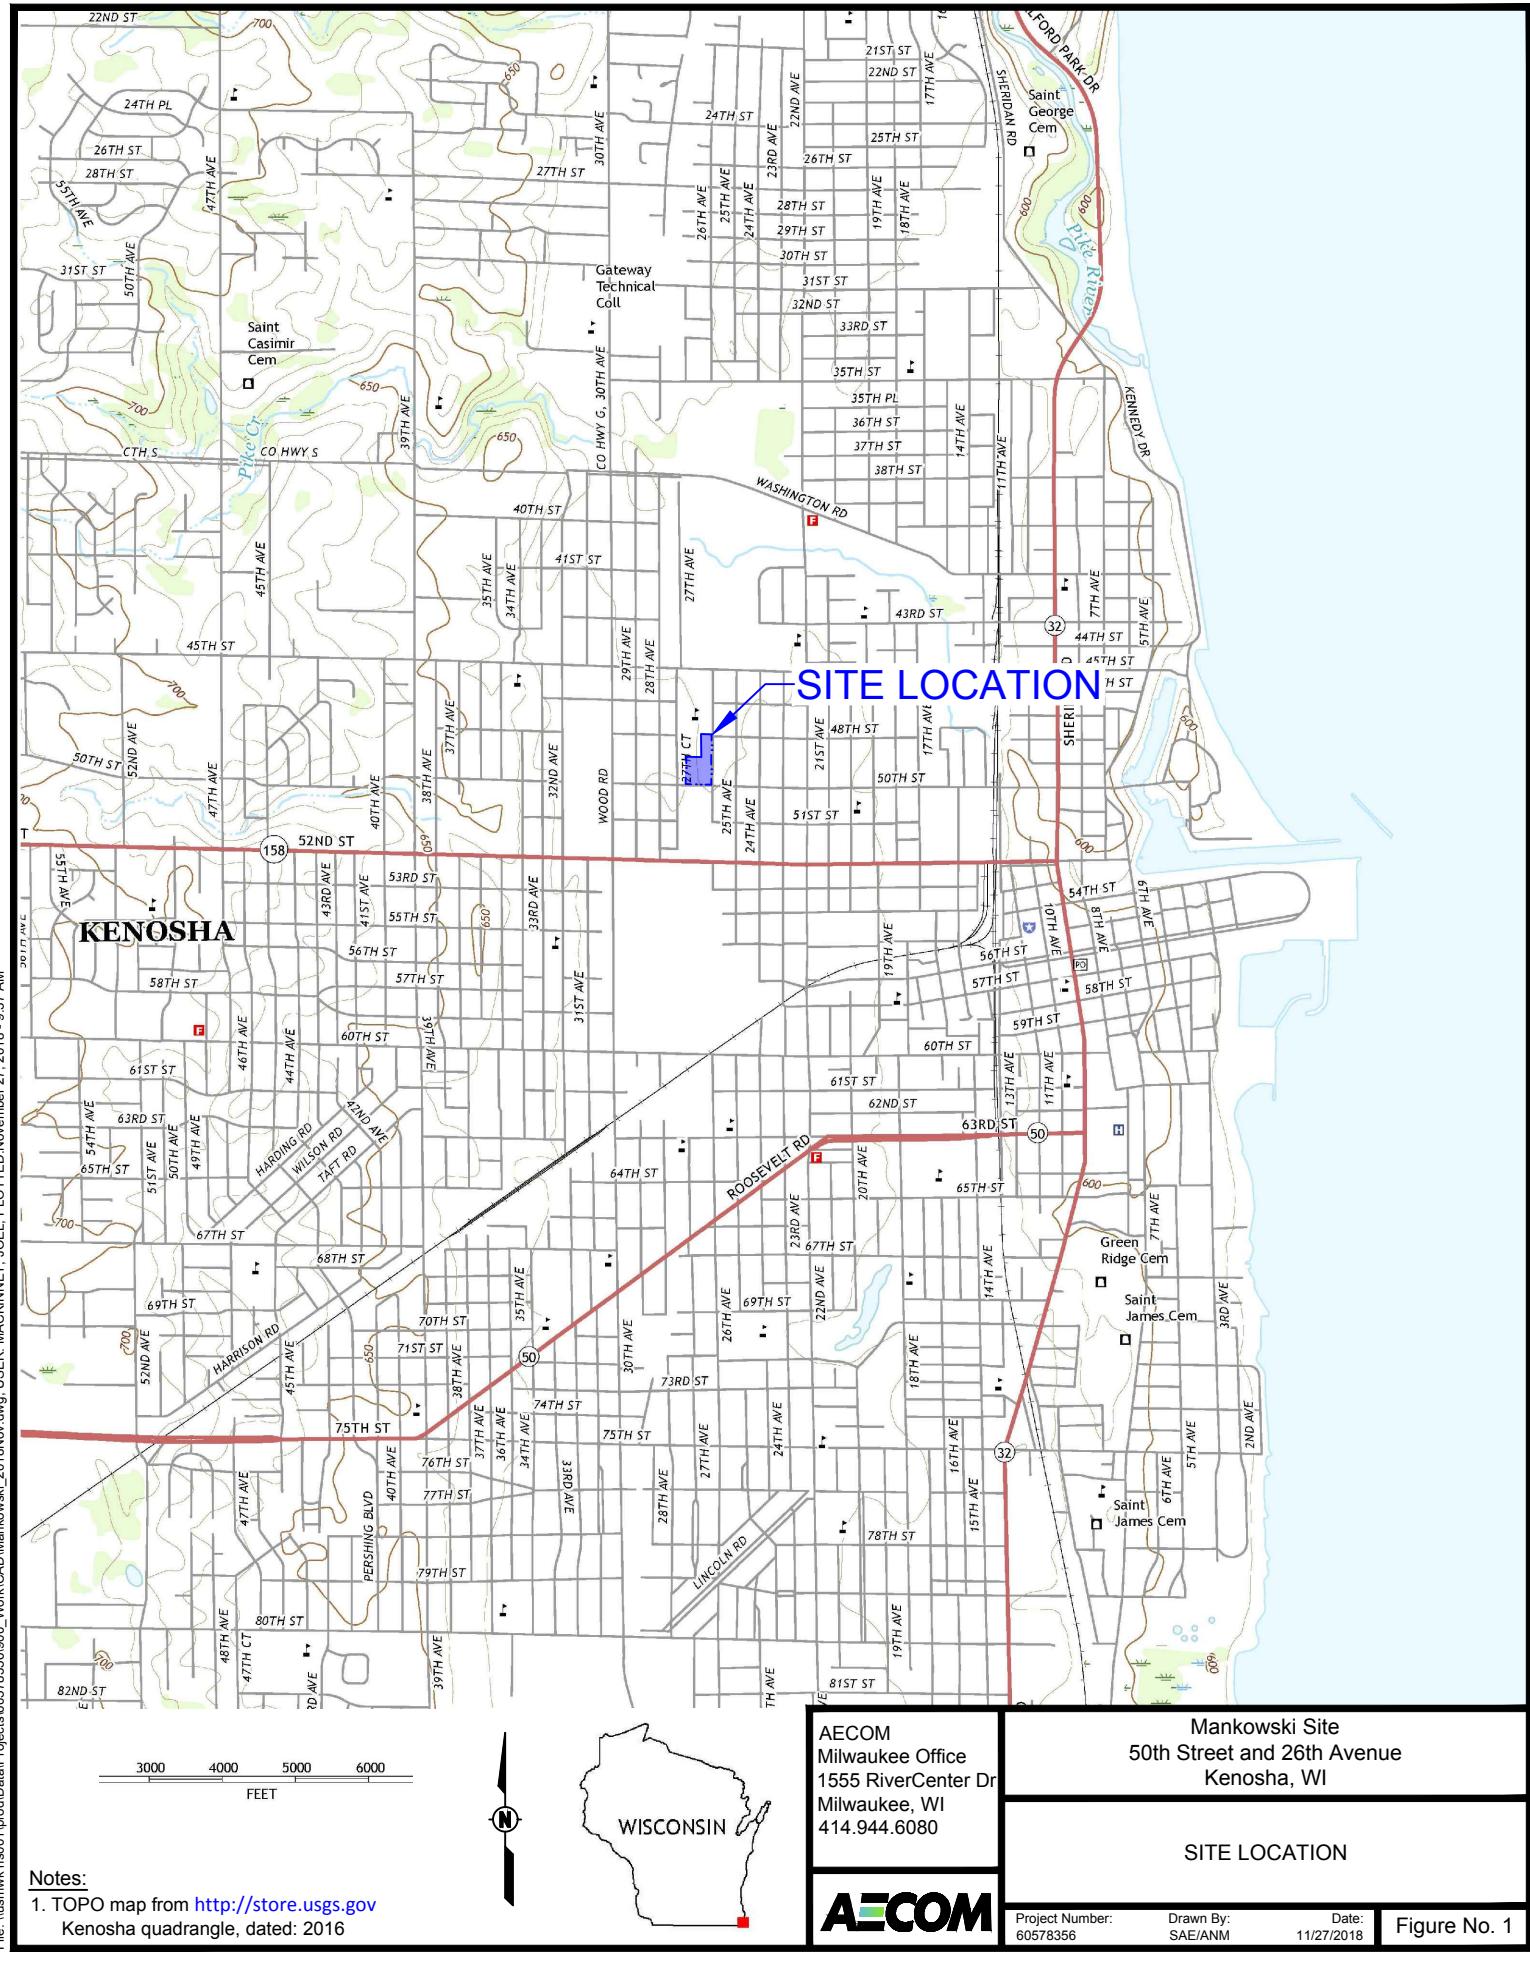

^J - Estimated concentration between reporting limit and method detection limit.

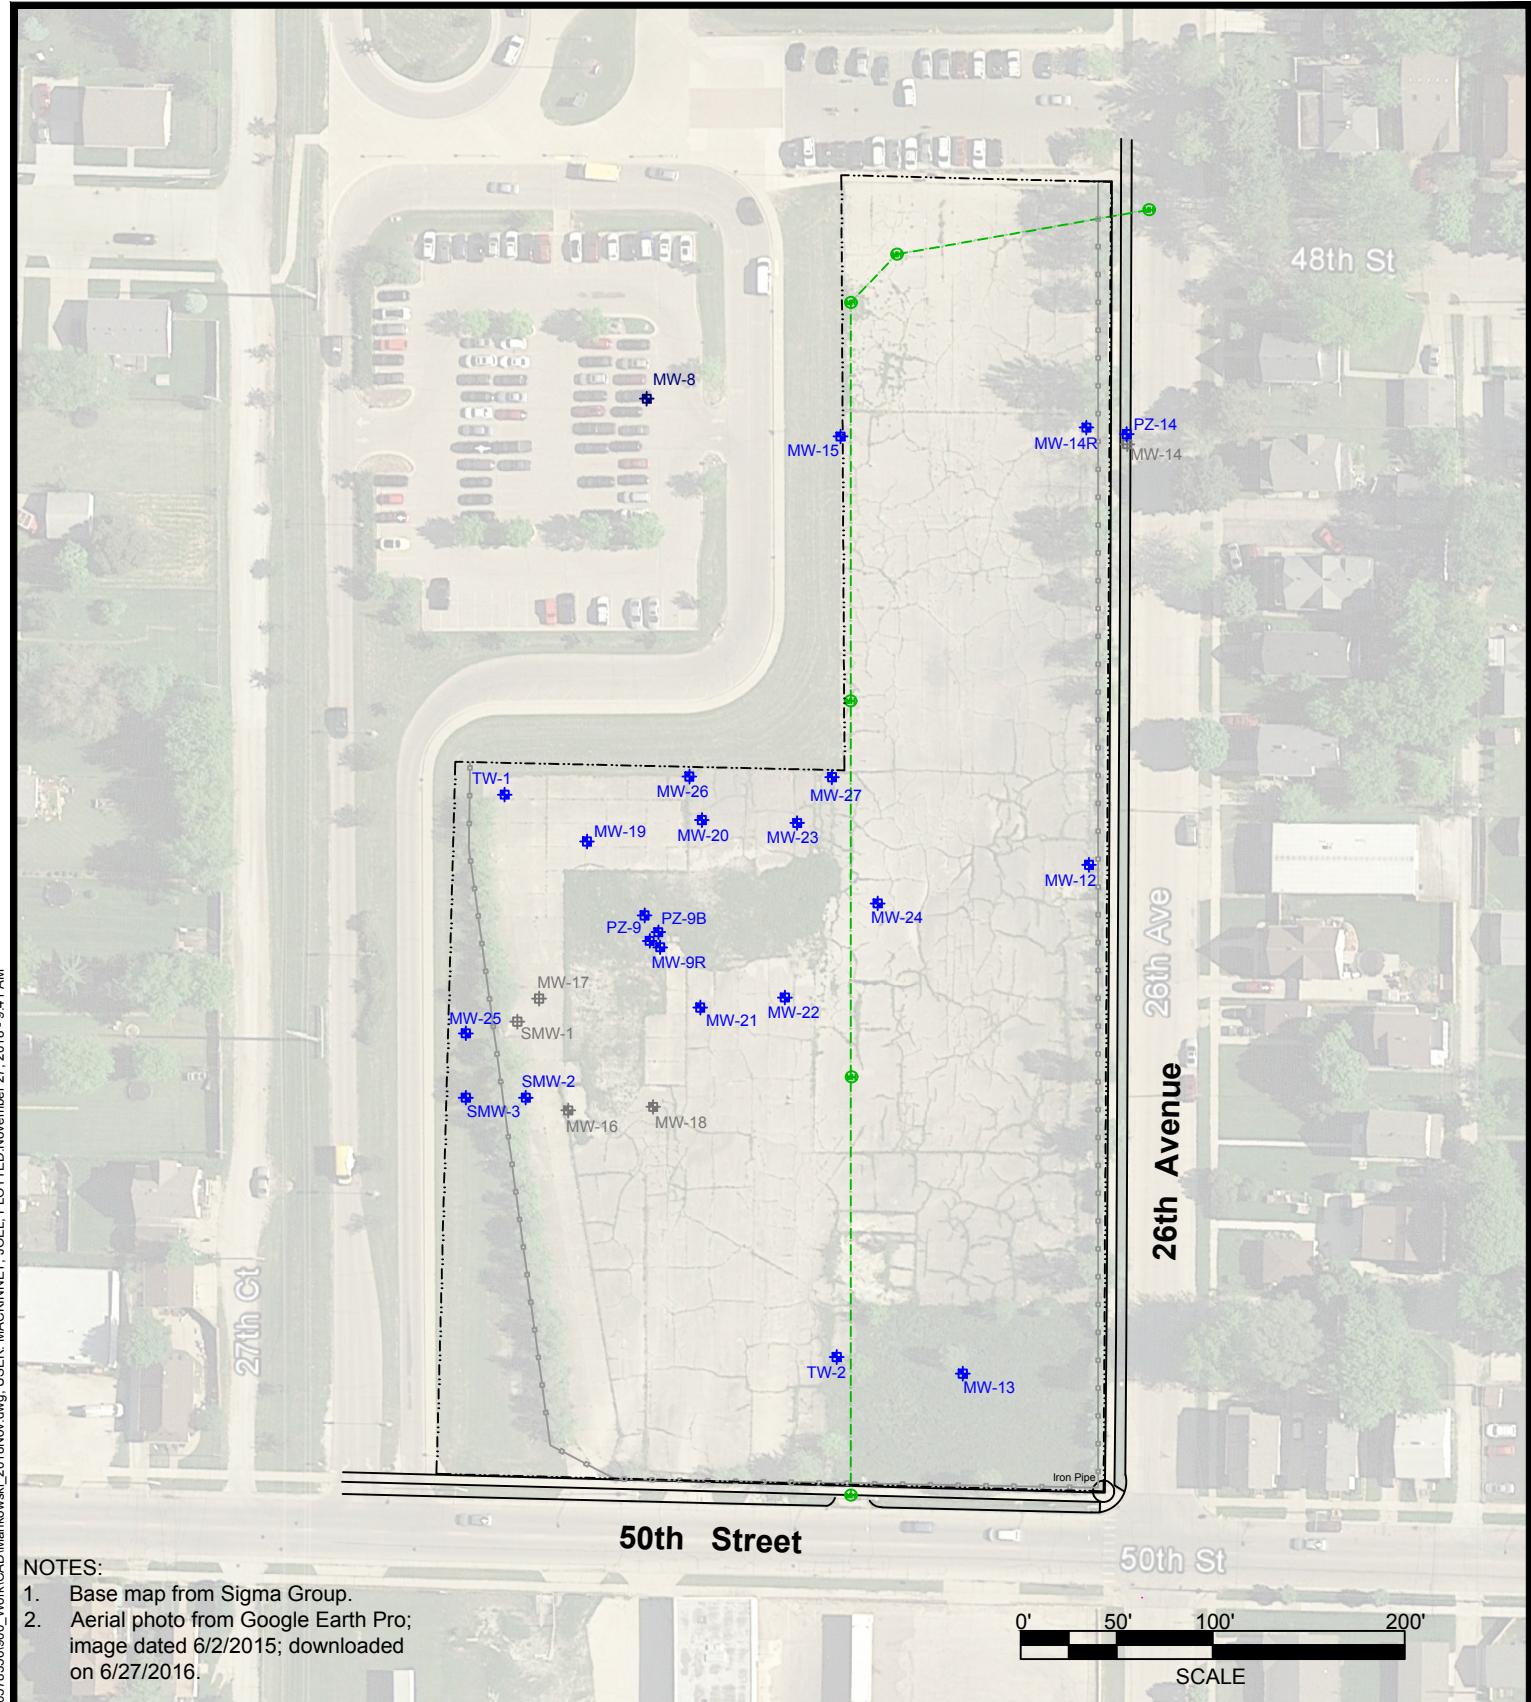

NR 140 ES = Wisconsin Administrative Code, Chapter NR 140 Enforcement Standard, February 2017, Exceedances are **Bold**.

NR 140 PAL = Wisconsin Administrative Code, Chapter NR 140 Preventive Action Limit, February 2017, Exceedances are *Underlined Italics*.

Exceedances: BOLD = concentration exceeds Chapter NR 140 PAL

Data prior to 2016 was collected by prior consultants and the data quality/data quality qualifiers are carried over from prior reports.

RE: Project: 60578356 MANKOWSKI
Pace Project No.: 40179444

Dear Lanette Altenbach:

Enclosed are the analytical results for sample(s) received by the laboratory on November 10, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: 60578356 MANKOWSKI
Pace Project No.: 40179444

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay
