May 2019 Groundwater Sampling Summary
Former Mankowski Property, 2600 50th Street, Kenosha, Wisconsin
BRRTS# 02-30-554934

Dear Ms. Billingsley,

AECOM conducted the third groundwater sampling events on May 6th and 7th 2019, as part of the semi-annual groundwater monitoring plan for 2018 and 2019 at the former Mankowski property (Property). The sampling was conducted as described in Task Order 125-051418 for the City of Kenosha (May 14, 2018). The purpose of this letter is to transmit the results of the May 2019 sampling event.

Site History

The Property (parcel number 09-222-36-134-003) is approximately 4 acres located north of 50th Street and west of 26th Avenue. The property was formerly part of a larger parcel previously owned by the Chrysler Corporation. The property is bounded to the north by an elementary school and residential properties to the east, south and west. The site location is depicted in Figure 1.

The Property was the subject of a number of investigations and several focused remedial actions. After confirmatory soil borings with groundwater sampling indicated that contamination remained despite the remedial action, the WDNR conducted further investigation which identified several areas of chlorinated volatile organic compound impacts in the vadose zone for remediation. Soil treatment and removal in these areas was conducted in 2017. Groundwater monitoring is being conducted to evaluate if the groundwater contamination continues to be stable or is reducing as a result of the soil remediation.

Groundwater Sampling

During the May 2019 sampling event, each of the 23 planned groundwater monitoring wells/piezometers were sampled. Monitoring wells MW-16 and MW-18, not found for the 2018 sampling events, were located in May 2019 and sampled. Figure 2 depicts the site layout and monitoring well/piezometer locations.

Prior to sample collection, groundwater elevation measurements were collected from the monitoring wells and piezometers for the evaluation of groundwater flow at the Property. Depth to groundwater measurements and calculated elevations are provided in Table 1.

Groundwater samples were collected from the monitoring wells and piezometers using low-flow sampling techniques with a peristaltic pump and new tubing for each well. Field parameters, including pH, conductivity, oxygen reducing potential, dissolved oxygen, and temperature, were measured during well purging and recorded following stabilization of each parameter. The field parameter measurements are included in Table 2.

Groundwater samples from the 23 wells were submitted to Pace Analytical Services, Inc. (Pace), in Green Bay, Wisconsin, and analyzed for volatile organic compounds (VOCs - SW846 Method 8260B).

Groundwater Results

Contoured groundwater elevations from the May 2019 measurements depict groundwater flow to the east-northeast (Figure 3), consistent with the flow direction determined by AECOM previously.

The groundwater analytical results were compared to Wisconsin Administrative Code Ch. NR 140.10, Table 1, Public Health Groundwater Quality Standards, and are summarized in Table 3 and depicted on Figure 4. Laboratory analytical reports are also attached.

Four chlorinated VOCs were detected above the PAL or ES; 1,1-dichloroethene (1,1-DCE), cis-1,2-dichloroethene (cis-DCE), trichloroethene (TCE) and vinyl chloride (VC). The wells with exceedances were:

Detected VOC	Wells Exceeding the ES	Wells Exceeding the PAL
1,1-Dichloroethene	MW-22, MW-23, MW-27	MW-19, MW-20, and MW-21
cis-1,2-Dichloroethene	MW-9R, PZ-9, MW-18, MW-19, MW-20, MW-21, MW-22, MW-23, and MW-27	MW-16, MW-25, MW-26, and SMW-2
Trichloroethene	MW-9R, PZ-9, PZ-9B, MW-16, MW-18, MW-19, MW-21, MW-22, MW-23, MW-25, MW-27, and SMW-2	MW-24, MW-26, and SMW-3
Vinyl chloride	MW-9R, PZ-9, MW-16, MW-18, MW-19, MW-20, MW-21, MW-22, MW-23, MW-25, MW-26, and MW-27	No wells with PAL exceedances

Groundwater analytical data from the May 2019 sampling event is similar to previous groundwater sampling events completed at the Property. Enforcement Standard (ES) exceedances for VOCs were detected in 14 of the 23 wells, primarily near the center of the Property. Preventive Action Limit (PAL) exceedances for VOCs were detected in nine of the 23 wells as listed above. It should be noted that new ES exceedances for 1,1-DCE is part of the natural dehalogenation process of chlorinated VOC reduction. The extent of VOC groundwater plume is similar to what was identified previously. VOCs were not detected in downgradient monitoring wells MW-15 or MW-14R. TCE was not detected in downgradient temporary well TW-2. It is assumed that the TCE detection in TW-2 reported for the November 2018 was a singular anomaly.

The overall relationship between TCE concentrations and groundwater elevations was assessed at three monitoring wells (MW-9R, MW-19 and MW-21) and one piezometer (PZ-9). Figures 5 through 8 depict TCE concentrations and groundwater elevations over time. MW-9R and MW-21 exhibit decreasing trend lines. MW-19 depicts a stable concentration. While PZ-9 depicts a slightly increasing concentration, the concentrations are lower than seen previously and more recently trend up and down with the groundwater elevation suggesting that some concentration remains in the capillary fringe which is subject to flushing with a rising water table. Soil remediation was completed in 2017 to remove the source of contamination in the unsaturated zone, but some residual TCE concentrations are still bound within the saturated soil.

Conclusions

The overall groundwater plume appears to be stable or decreasing. Further evaluation will be conducted with a November 2019 sampling event.

Please contact us if you have questions about this letter.

Notes: Pre-2012 data with a value of 0 reported for the concentration was provided in that format from the prior consultants. Original lab data not available to verify results.

DCE - Dichloroethene

NPD - Not previously detected (historic data from prior consultants)

µg/L = micrograms per liter

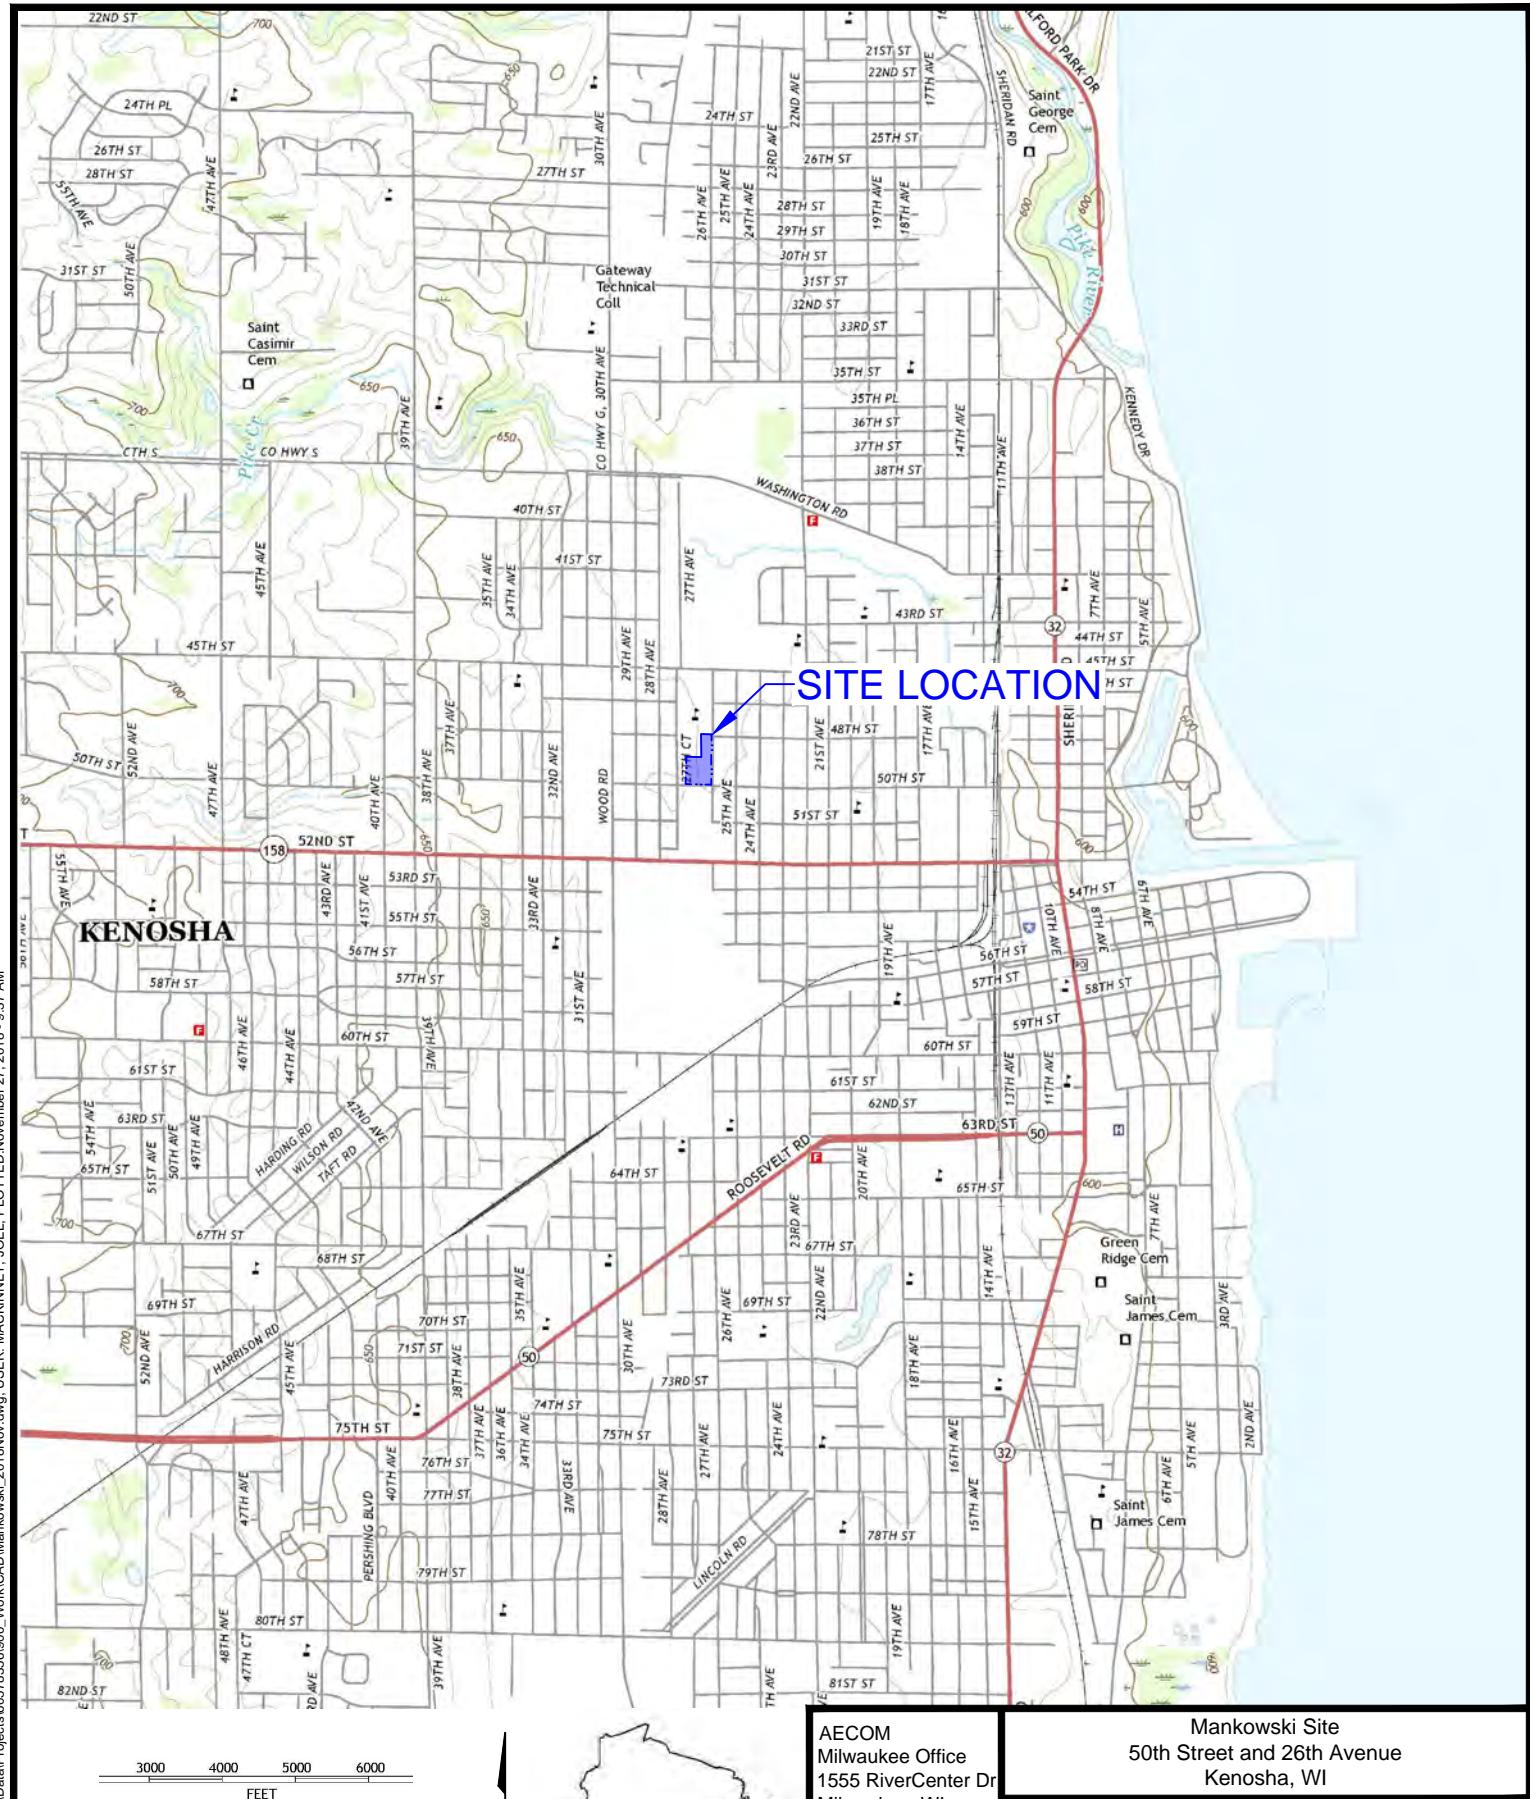

^J - Estimated concentration between reporting limit and method detection limit.

NR 140 ES = Wisconsin Administrative Code, Chapter NR 140 Enforcement Standard, February 2017, Exceedances are **Bold**.

NR 140 PAL = Wisconsin Administrative Code, Chapter NR 140 Preventive Action Limit, February 2017, Exceedances are *Underlined Italics*.

Exceedances: BOLD = concentration exceeds Chapter NR 140 PAL

Data prior to 2016 was collected by prior consultants and the data quality/data quality qualifiers are carried over from prior reports.

RE: Project: 60578356 MANKOWSKI
Pace Project No.: 40187293

Dear Lanette Altenbach:

Enclosed are the analytical results for sample(s) received by the laboratory on May 09, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: 60578356 MANKOWSKI
Pace Project No.: 40187293

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

HS Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.
