Hi Tauren,

A-1 Radon was on-site June 10th. Mike said it went good, he thinks they got the information they needed. I corresponded with A-1 yesterday and they indicated that are working on the OM&M report and should have that completed by July 15th and emailed to REL. Once we have this information, REL should be able to proceed with coordinate the additional vapor sampling.

Thank you,
Nicole

Hi Nicole,

Was A-1 Radon & Vacuum able to complete the work for the mitigation system on June 3, 2020 and did REL complete additional vapor sampling? Please provide an update when you have a chance.

Thanks,

We are committed to service excellence.

Good Morning Tauren,

I wanted to follow up and inform you that Jagemann Plating has retained A-1 Radon & Vacuum to complete and inspection and develop the OM&M of the vapor mitigation system. At this time, the work is scheduled for June 3rd due to policies that have been implemented at the facility resulting from State of WI orders for COVID19. Once this work is completed, REL plans to complete the additional vapor sampling WDNR has requested. We will keep you updated.

Please let me know if you have any questions.

Stay safe and Thank you,

Nicole

Hi Tauren,

We have a meeting set up with Jagemann Plating on January 14th to discuss the additional work outlined in the email below and the WNDR's request for PFA sampling. I will provide you another update for outline for work moving forward, after the meeting.

Appreciate all your help. Thank you,
Nicole

Hi Nicole,

That sounds good. I will call you at your office phone number at 11am on Friday then.

Thanks,

We are committed to service excellence.

Hi Nicole,

I have been meaning to follow up with you on my discussion of vapor for this site that I had with Jennifer Borski and Josie Schultz. I discussed this site with them on December 3, 2019, as summarized below. Are you available on Friday to discuss? I'm available anytime from 10am-3:30pm. Please let me know if Friday works for you.

Thanks,

We are committed to service excellence.

Subject: RE: Please Review for Vapor/Air Investigation: Jagemann Plating Co Inc, BRRTS # 02-36-555544

Tauren,

Thanks for taking the time to discuss this site today with me and Josie. I understand you are working with the responsible party to perform additional soil and groundwater investigation to define the degree and extent of metals and VOCs. Additional vapor investigation is also needed at this site, including verification the mitigation system installed within the basement area in 2015 is protective for the office workers. We specifically discussed the following actions:

- Photo document the vapor mitigation system and current manometer reading to compare against initial reading;
- Verify historical documentation of the system design is adequate for future operation & maintenance or provide supplemental documentation;
- Develop a long-term operation, maintenance & monitoring plan for the system;
- Sample indoor air within the basement and office areas (non-manufacturing area) (IA-4, IA-5 & IA-6 + additional locations) to verify the mitigation system is protective;

- Resample SSV-1 and SSV-2 to determine if the mitigation system is effectively reducing sub-slab vapor concentrations beyond the office area;
- Perform additional sub-slab vapor sampling within the southern manufacturing area on-site (not the new addition), including around B-12/MW-14 and along preferential pathways; and
- Enhance the off-site SSV/IA vapor investigation based on interior utility laterals, interior layout & building use.

Additional investigation or interim actions (mitigation) may be needed based on findings.

We are committed to service excellence.
