Kenneth Kazmierczak CFO, VP Administration
Skana Aluminum Company
PO Box 1477
Manitowoc, WI 54220

SUBJECT: Certificate of Completion for Skana Aluminum Company, 2009 Mirro Drive, Manitowoc
Parcel #s: 052-809-401-010.00, 052-809-102-011.00,
052-809-103-011.00, 009-109-013-002.00

Dear Mr. Kazmierczak:

Congratulations! Your Certificate of Completion is attached. It has been a pleasure working with you and your consultant on this Voluntary Party Liability Exemption (VPLE) process.

In November 2010, the Department of Natural Resources ("the Department") has received your request for issuance of a *Certificate of Completion* for the property owned by Skana Aluminum Company, located at 2009 Mirro Drive Manitowoc, Wisconsin and herein after referred to as "the Property". You have requested that the Department determine whether Skana Aluminum Company has met the requirements under s. 292.15(2), Wis. Stats., for issuance of a *Certificate of Completion*.

The Property subject of this *Certificate of Completion* is real property owned by Skana Aluminum Company, encompassing approximately 132 acres. The Property is further described more or less as:

Parcel 1: All that part of the southeast Quarter (SE ¼) of Section 9 (9) Township Nineteen (19) north, Range twenty-four (24) east, lying north of Chicago and Northwestern Railway Company right of way, partially in the City of Manitowoc and partially in the Town of Manitowoc, County of Manitowoc, State of Wisconsin.

Parcel 2: the Southwest Quarter (SW ¼) of the Northeast Quarter (NE ¼) and South Half (S ½) of the Northwest Quarter (NW ¼) of the Northeast Quarter (NE ¼) of Section Nine (9) Township Nineteen (19) North, Range Twenty-four (24) East, in the City of Manitowoc, County of Manitowoc, State of Wisconsin.

Determination

As you are aware, s. 292.15, Wis. Stats., authorizes the Department to issue a *Certificate of Completion* to a voluntary party that conducts an approved environmental investigation of a property and restores the environment to the extent practicable and minimizes the harmful effects with respect to hazardous substance discharges on or originating from the property. Based on the information received by the Department, the Department has determined that the investigation and restoration (to the extent practicable) of the Property is complete and that all

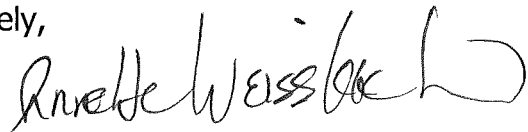

the conditions in s. 292.15(2), Wis. Stats., have been met. Attached is the *Certificate of Completion* for this Property.

While the conditions for issuance of a *Certificate of Completion* have been met, impervious barriers consisting of portions of buildings and "capped" areas consisting of pavement, gravel and grass surfaces must be maintained. In addition a groundwater use restrictions remain in place at the Property.

Conclusions

The Department appreciates the work undertaken by Skana Aluminum Company, to investigate and restore to the extent practicable the contamination associated with the Property. The exemption provided by the *Certificate of Completion* applies to any successor or assignee of Skana Aluminum Company, if the successor or assignee complies with the appropriate conditions, pursuant to s. 292.15(3), Wis. Adm. Code. If you have any questions or concerns regarding this letter or the *Certificate of Completion*, please call me at (920) 662-5165.

Sincerely,

Annette Weissbach, Hydrogeologist
Remediation & Redevelopment Program

State of Wisconsin
Department of Natural Resources

**CERTIFICATE OF COMPLETION
OF RESPONSE ACTIONS
UNDER SECTION 292.15(2)(ae), WIS. STATS.**

Whereas, **Skana Aluminum Company** has applied for an exemption from liability under s. 292.15, Wis. Stats., for the property located at 2009 Mirro Drive, Manitowoc, Wisconsin, further described in the legal description found on Attachment A (the "Property");

Whereas, an environmental investigation of the Property has been conducted and the Wisconsin Department of Natural Resources ("WDNR") has determined that environmental contamination exists at the Property;

Whereas, **Skana Aluminum Company** has submitted to the WDNR certain investigation reports and a remedial action plan for the Property which comply with the requirements set forth in chs. NR 700-754, Wis. Adm. Code, consisting of the documents and reports listed in Attachment B;

Whereas, in accordance with s. 292.15(2)(ae)1, Wis. Stats., the WDNR has determined that an environmental investigation has been conducted which adequately identified and evaluated the nature and extent of the hazardous substance discharges on the Property. The WDNR approved of the site investigation on September 8, 2011;

Whereas, the Property contains soil contamination that exceeds site-specific and/or generic residual contaminant levels ("RCLs") under ch. NR 720, Wis. Adm. Code, and groundwater contamination that exceeds a groundwater quality enforcement standard under ch. NR 140, Wis. Adm. Code. Therefore, the Property will be included on the WDNR's Geographical Information System data base ("the GIS Registry") pursuant to s. 292.12(3), Wis. Stats. **Skana Aluminum Company** has submitted to the WDNR all the information necessary to be included on the GIS Registry, pursuant to Wis. Adm. Code;

Whereas, on January 20, 2012, the WDNR issued recent case closure letters

for the Property (Attachment C). In addition, several other older closure letters are also applicable for this Property. The owner of this Property shall adhere to, abide by, and maintain the continuing obligations and other requirements that are specified in the attached state case closure letters and maintenance plans;

The closure letters require maintenance of cover or barriers at certain locations on the Property in order to prevent direct contact with contaminated soil and to prevent water infiltration through residual soil contamination that might otherwise pose a threat to public health and the environment. The closure letters require that if soil with residual contamination is excavated in the future, the Property owner at the time of excavation must manage the soil in accordance with applicable federal and state laws; and

The closure letter states that chlorinated solvents remain in subslab and groundwater beneath building 5C at levels that, depending on construction and occupancy, may be of concern for vapor intrusion in the future. The case closure letter for the chlorinated solvents in the sump area of building 5C (02-36-544601) and this Certificate describes requirements that must be followed if changes in land use or construction is planned in this area to limit exposure to vapors;

Whereas, the WDNR has determined that the response action is complete and this determination is based on the Property being used as an industrial facility. In the event that the covers or barriers that currently exist are removed, the replacement barrier must be equally protective. Because of the residual contamination and certain continuing obligations for this site, before use of this site can be changed to residential use, or use by certain sensitive populations, such as a day care center, school, a senior center, hospital or a similar use, notification of the WDNR is required at a minimum. Additional sampling and/or cleanup may be required to ensure that the residual contamination levels, existing remedial action, and land use is protective. In that event, a new closure letter and Certificate of Completion may need to be issued;

Whereas, if the requirements of s. 292.15, Wis. Stats., this Certificate, the case closure letters or the maintenance plans are not followed, or if the land use changes, the WDNR may take actions under ss. 292.11 or 292.12, Wis. Stats., to ensure compliance with the specified requirements, and the person who owns or controls the Property may no longer qualify for the liability protections under s. 292.15, Wis. Stats.;

Whereas, on January 20, 2012, the WDNR determined that response actions necessary to restore the environment were completed, except with respect to groundwater contaminated with aluminum, arsenic, polycyclic aromatic hydrocarbons, trichloroethylene (TCE), tetrachloroethylene (PCE), and PCBs above the ch. NR 140, Wis. Adm. Code, groundwater quality enforcement standards. The WDNR has determined that this groundwater contamination will be brought into compliance through natural attenuation, in accordance with administrative rules promulgated by the WDNR; and

Whereas, **Skana Aluminum Company** has paid to WDNR the appropriate insurance fee and has submitted a complete insurance application form to obtain coverage for the Property under the state's master insurance contract in accordance with s. 292.15(2)(ae)3m., Wis. Stats., and ch. NR 754, Wis. Adm. Code, based on their desire to use natural attenuation to remediate groundwater contamination that exceeds ch. NR 140, Wis. Adm. Code, groundwater quality enforcement standards;

Therefore, based upon the information that has been submitted, the WDNR hereby certifies that the response actions set forth in the WDNR approved remedial action plan for the Property and any other necessary response actions have been completed, except with respect to aluminum, arsenic, polycyclic aromatic hydrocarbons, trichloroethylene (TCE), tetrachloroethylene (PCE), and PCBs contaminated groundwater above ch. NR 140, Wis. Adm. Code, enforcement standards that WDNR has determined will be brought into compliance through natural attenuation, in accordance with rules promulgated by WDNR.

Upon issuance of this Certificate, **Skana Aluminum Company** and the persons qualified for protection under s. 292.15(3), Wis. Stats., are exempt from the provisions of ss. 289.05(1), (2), (3) and (4), 289.42(1), 289.67, 291.25(1) to (5), 291.29, 291.37, 292.11(3), (4), and (7)(b) and (c) and 292.31(8), Wis. Stats., with respect to the existence of hazardous substances on or originating from the Property, the release of which occurred prior to the date the WDNR approved the environmental investigation required under s. 292.15(2)(ae)1., Wis. Stats. However, the person who owns or controls the Property would no longer qualify for this liability exemption if that person fails to maintain or monitor the Property as required by the conditions in this Certificate, the **January 20, 2012** case closure letters, the older case closure letters included in Attachment C, s. 292.15(7) and s. 292.12, Wis. Stats., and administrative rules promulgated by the WDNR. Any discharges of a hazardous substance to or from the Property that occur after the date that the environmental investigation was approved will be the responsibility of the current Property owner and any other person who possesses or controls that discharge and any person who caused the discharge.

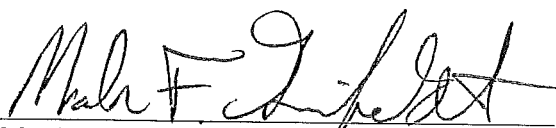

If natural attenuation of contaminated groundwater fails, the insurance coverage under s. 292.15(2)(ae)3m., Wis. Stats., may be used by the state to cover the costs of complying with s. 292.11(2), Wis. Stats., with respect to groundwater quality.

The protection from liability provided under s. 292.15(2), Wis. Stats., does not apply to any person who has obtained a Certificate of Completion by fraud or misrepresentation, or by knowingly failing to disclose material information or under circumstances in which **Skana Aluminum Company** knew or should have known about more discharges of hazardous substances than was revealed by the investigation approved by the WDNR.

Nothing in this Certificate or in s. 292.15, Wis. Stats., affects the authority of the WDNR to exercise any powers or duties under applicable laws other than ss. 289.05(1), (2), (3) and (4), 289.42(1), 289.67, 291.25(1) to (5), 291.29, 291.37, 292.11(3), (4), and (7)(b)

and (c) and 292.31(8), Wis. Stats., with respect to any release or threatened release of contaminants at the Property, or the right of the WDNR to seek relief available against any person who is not entitled to protection from liability under s. 292.15, Wis. Stats., with respect to such release or threatened release.

SIGNED AND CERTIFIED this 5th day of March, 2012.

A handwritten signature in black ink, appearing to read "Mark F. Giesfeldt", written over a horizontal line.

Manitowoc, WI 54220

KEEP THIS DOCUMENT WITH YOUR PROPERTY RECORDS

Subject: Final Case Closure with Continuing Obligations
Skana Aluminum (K&V) Sumps (chlorinated solvents)
Building 5C at 2009 Mirro Drive, Manitowoc Wisconsin
WDNR Environmental Repair Activity # 02-36-544601

Dear Mr. Kazmierczak:

The Department of Natural Resources (DNR) considers the "sumps" (chlorinated solvents) case closed, with continuing obligations. No further investigation or remediation is required at this time. However, you and future property owners must comply with the continuing obligations as explained in the conditions of closure in this letter. Please read over this letter closely to ensure that you comply with all conditions and other on-going requirements. Provide this letter and the attached maintenance plan to anyone who purchases this property from you.

This final closure decision is based on the correspondence and data provided, and is issued under ch. NR 726, Wisconsin Administrative Code. The Northeast Region Closure Committee reviewed the request for Closure on December 2, 2011. The Closure Committee reviews environmental remediation cases for compliance with state laws and standards to maintain consistency in the closure of these cases. A conditional closure letter was issued by the DNR on December 6, 2011 and documentation that the conditions in that letter were met was received on January 9, 2012.

The following documentation was received:

- NR 141 Wis Adm. Code well abandonment forms: MW-06.16, MW-06.05, MW-06.08, MW-06.11, MW-06.19, MW-08.22, MW-08.24, MW-08.26, TW-06.18, TW-06.19, TW-06.20, TW-06.21, TW-06.22, TW-06.23, TW-06.24, TW-06.25, TW-06.26
- Cap Maintenance Plan
- DOT specifications for concrete pavement and asphaltic surfaces
- VOC contour map for GIS Registry documentation

The "Sumps" case is an apparent historic release of chlorinated solvents (primarily trichloroethylene) in the vicinity of Building 5C of this former Mirro facility now owned and operated by Skana Aluminum. The conditions of closure and continuing obligations required were based on the property being used for **Industrial purposes.**

Continuing Obligations

The continuing obligations for this site are summarized below. Further details on actions required are found in the section Closure Conditions.

- Groundwater contamination is present above ch. NR 140 enforcement standards.
- Residual soil contamination exists that must be properly managed should it be excavated or removed.
- Building 5C and the surrounding pavement must be maintained over contaminated soil and the state must approve any changes to this barrier.
- Before the land use may be changed from industrial to non-industrial, additional environmental work must be completed.
- Site-specific exposure assumptions were used. Current industrial land or property use must be maintained to be protective. If changes to the current property use or land use are planned, an assessment must be made of whether the closure is still protective.
- Remaining soil contamination could result in vapor intrusion if future construction activities occur. If new building construction is planned, vapor control technologies will be required for occupied buildings, unless the property owner assesses the potential for vapor intrusion, and the DNR agrees that conditions are protective of the new use.

GIS Registry

This site will be listed on the Remediation and Redevelopment Program's internet accessible Geographic Information System (GIS) Registry, to provide notice of residual contamination and of any continuing obligations. DNR approval prior to well construction or reconstruction is required for all sites shown on the GIS Registry, in accordance with s. NR 812.09(4) (w), Wis. Adm. Code. To obtain approval, complete and submit Form 3300-254 to the DNR Drinking and Groundwater program's regional water supply specialist. This form can be obtained on-line at <http://dnr.wi.gov/org/water/dwg/3300254.pdf> or at the web address listed below for the GIS Registry.

All site information is also on file at the Northeast Regional DNR office, at 2984 Shawano Avenue in Green Bay. This letter and information that was submitted with your closure request application, including the maintenance plan, will be included on the GIS Registry in a PDF attachment. To review the site on the GIS Registry web page, visit the RR Sites Map page at <http://dnr.wi.gov/org/aw/rr/gis/index.htm>.

Prohibited Activities

Certain activities are prohibited at closed sites because maintenance of a barrier is intended to prevent contact with any remaining contamination. When a barrier is required, the condition of closure requires notification of the DNR before making a change, in order to determine if further action is needed to maintain the protectiveness of the remedy employed. The following activities are prohibited on any portion of the property where pavement and the building foundation are required, as shown on the shaded area of attached Figure 2, unless prior written approval has been obtained from the DNR:

- removal of the existing barrier;
- replacement with another barrier;
- excavating or grading of the land surface;
- filling on covered or paved areas;
- plowing for agricultural cultivation;
- construction or placement of a building or other structure;

- changing the use or occupancy of the property to a residential exposure setting, which may include certain uses, such as single or multiple family residences, a school, day care, senior center, hospital, or similar residential exposure settings;

Closure Conditions

Compliance with the requirements of this letter is a responsibility to which the current property owner, and any subsequent property owners must adhere. DNR staff will conduct periodic prearranged inspections to ensure that the conditions included in this letter and the attached maintenance plans are met. If these requirements are not followed, the DNR may take enforcement action under s. 292.11, Wisconsin Statutes to ensure compliance with the specified requirements, limitations or other conditions related to the property.

Residual Groundwater Contamination (ch. NR 140, Wis. Adm. Code)

Groundwater contamination greater than enforcement standards is present on this contaminated property as shown on the **attached Figure 12**. If you intend to construct a new well, or reconstruct an existing well, you'll need prior DNR approval.

Residual Soil Contamination (ch. NR 718, or ch. 289, Stats.; chs. 500 to 536, Wis. Adm. Code)

Residual soil contamination remains under Building 5C. If soil under Building 5C is excavated in the future, the property owner at the time of excavation must sample and analyze the excavated soil to determine if contamination remains. If sampling confirms that contamination is present, the property owner at the time of excavation will need to determine whether the material is considered solid or hazardous waste and ensure that any storage, treatment or disposal is in compliance with applicable standards and rules. In addition, all current and future owners and occupants of the property need to be aware that excavation of the contaminated soil may pose an inhalation or other direct contact hazard and as a result special precautions may need to be taken to prevent a direct contact health threat to humans.

Cover or Barrier (s. 292.12 (2) (a), Wis. Stats)

The pavement and building that exists in the shaded areas shown on the **attached Figure 2** shall be maintained in compliance with the **attached maintenance plan** in order to minimize the infiltration of water and prevent additional groundwater contamination that would violate the groundwater quality standards in ch. NR 140, Wis. Adm. Code, and to prevent direct contact with residual soil contamination that might otherwise pose a threat to human health.

A cover or barrier for industrial land uses, or certain types of commercial land uses may not be protective if use of the property were to change such that a residential exposure would apply. This may include, but is not limited to single or multiple family residences, a school, day care, senior center, hospital or similar settings. Before using the property for such purposes, you must notify the DNR to determine if additional response actions are warranted. A request may be made to modify or replace a cover or barrier. The replacement or modified cover or barrier must be protective of the revised use of the property, and must be approved in writing by the DNR prior to implementation. The **attached maintenance plan and inspection log** are to be kept up-to-date and on-site. Submit the inspection log to the DNR only upon request.

Vapor Mitigation or Evaluation

Vapor intrusion is the movement of vapors coming from volatile chemicals in the soil or groundwater, into buildings where people may breathe air contaminated by the vapors. Vapor mitigation systems are used to interrupt the pathway, thereby reducing or preventing vapors from moving into the building.

Chlorinated solvents remain in subslab and groundwater beneath building 5C, as shown on the **attached Figure 12**, at levels that may be of concern for vapor intrusion in the future, depending on construction and occupancy of a building. Currently the building is used for industrial purposes, therefore, before a new

building is constructed, the property owner must notify the DNR. Vapor control technologies are required for construction of occupied buildings unless the property owner assesses the vapor pathway and DNR concurs that conditions at the property are protective of the new use.

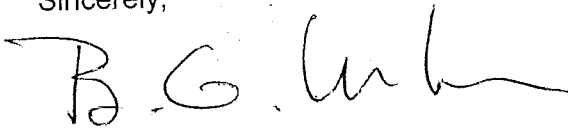

In addition, depending on site-specific conditions, construction over contaminated materials may result in vapor migration of contaminants into enclosed structures or migration along newly placed underground utility lines. The potential for vapor inhalation and means of mitigation should be evaluated when planning any future redevelopment, and measures should be taken to ensure the continued protection of public health, safety, welfare and the environment at the site.

The following DNR fact sheet, "Continuing Obligations for Environmental Protection", RR-819, was included with this letter, to help explain a property owner's responsibility for continuing obligations on their property. If the fact sheet is lost, you may obtain a copy at <http://dnr.wi.gov/org/aw/rr/archives/pubs/RR819.pdf>.

Please send written notifications in accordance with the above requirements to the Northeast Regional Headquarters, to the attention of RR Program Environmental Associate.

We appreciate your efforts to restore the environment at this site and enroll the property in the Voluntary Party Liability Exemption (VPLE) process. Your Certificate of Completion will be issued in the next several weeks. If you have any questions regarding this closure decision or anything outlined in this letter, please contact Annette Weissbach at 920-662-5165.

Sincerely,

Bruce Urban, Air and Waste Division Leader
Northeast Region

Date of Preparation: 25 January 2012
Date of Initiation: 15 February 2012

Subject Property: SKANA ALUMINUM COMPANY
2009 Mirro Drive
Manitowoc, Wisconsin 54221

VLPE #06-36-556282
WI DNR Environmental Repair Activity # 02-36-544601/02-36-550138
Facility ID# 436106110

Legal Description: All that part of the Southeast Quarter (SE ¼) of Section Nine (9) North, Range Twenty-four (24) East, lying North of the Chicago and Northwestern Railway Company right of way, partially in the City of Manitowoc and partially in the Town of Manitowoc, County of Manitowoc, State of Wisconsin, EXCEPTING THEREFROM Lot One (1) of a Certified Survey recorded in Volume 24 of Certified Survey Maps, Page 63 as Document No.967193. ALSO EXCEPTING portion conveyed for street purposes by Quit Claim Deeds recorded in Volume 1995, Page 230, Document No. 969539 and in Volume 1995, Page 231 as Document No. 969540.

The Southwest Quarter (SW ¼) of the Northeast Quarter (NE ¼) and the South Half (S ½) of the Northwest Quarter (NW ¼) of the Northeast Quarter (NE ¼) of Section Nine (9), Township Nineteen (19) North, Range Twenty-four (24) East, in the City of Manitowoc, County of Manitowoc, State of Wisconsin. EXCEPTING portion conveyed for street purposes by Quit Claim Deed recorded in Volume 1995, Page 230, as Document No. 969539.

Introduction

This document (BARRIER/CAP MAINTENANCE PLAN) is herein referenced as the **Maintenance Plan** for the existing concrete floors associated with Building 5C and those existing asphalt pavement areas surrounding Building 5C. These structures (concrete floors/asphalt pavement) are referenced as engineering controls (vapor-contact barrier/water infiltration cover) at the referenced subject property in accordance with the requirements of NR 724.13(2), Wisconsin Administrative Code. The maintenance activities relate to the existing (concrete floors associated with Building 5C and those asphalt pavement areas surrounding Building 5C) occupying the area over the residual contaminated groundwater/soil regimes associated with WI DNR Repair Activities #02-36-544601/02-36-550138, is hereafter referenced as the (Area of Concern {AOC}).

No contamination associated with this Maintenance Plan has extended off site is likely to migrate off site under the current conditions.

More site-specific information about this property may be found in:

Description of Contamination

The shallow unconsolidated/vadose zone soils and saturated zone(s) within the AOC have been identified as contaminated by one or more of the following:

CAS 56553	Benzo(a)anthracene	CAS 50328	Benzo(a)pyrene
CAS 205992	Benzo(b)fluoranthene	CAS 207089	Benzo(k)fluoranthene
CAS 107-06-2	Cis-1, 2-Dichloroethene	CAS 218019	Chrysene
CAS 53703	Dibenzo(a,h)anthracene	CAS 193395	Indeno(1,2,3-cd)pyrene
CAS 129000	Pyrene	CAS 79016	Trichloroethylene
CAS 75014	Vinyl Chloride		

The unconsolidated vadose zone soils are defined as those soils in the AOC which are not saturated with groundwater below the elevation of (+/- 605 ft MSL) and limited to a maximum depth of 30 ft below ground surface or 575 ft MSL). Saturated zone(s) or those sediments which have the potential to produce non-potable and/or potable water (groundwater) within the AOC defined in the unconsolidated soils above the elevation of 575 ft MSL.

The following figures are presented as Exhibit A to support and define the AOC:

- Well Locations, Screen Depths & Soil Sample Locations
(All wells points within the AOC have been sealed before the Initiation date of this Maintenance Plan)
- VOC Contour September 2011
NR 140 Public Health Enforcement Standards
NR 140 Prevention Action Limits
- Summary of PAH Concentrations Groundwater Regime -2011
NR 140 Public Health Enforcement Standards
NR 140 Prevention Action Limits
- PAH/VOC/CVOC Contour September/December 2011 & January 2012
Inspection Area for this Maintenance Plan, (Light Grey)

Description of the Surface Structures to be Maintained

The concrete floor/surface structures supporting Building 5C and those existing asphalt pavement areas surrounding Building 5C are herein described and consists of the following matrix:

Building 5C Floor/Surface Structures Supporting Building 5C

Existing Floors (typical 8-12 inches of concrete {3,200 psi})
(minimum maintained cover 6 inch of concrete)

Effective February 15, 2012, an inspection of the concrete floors within the AOC will be conducted and any voids not occupied by sealed equipment will be sealed to comply with the minimum 6 inch maintained concrete cover.

Concrete surfaces will be maintained/repared in accordance with the Wisconsin Department of Transportation Specifications for Concrete Pavement (Section 415), reference Annotated 2012 Edition of Standard Specifications. (Attachment No. 1)

Asphalt Pavement Areas Surrounding Building 5C

Asphalt Pavement (typical 4 inches of asphalt cover)
(minimum thickness 4 inches of asphalt)

Effective June 15, 2012, an inspection of the asphalt pavement within the AOC will be conducted and any voids through the pavement will be repaired and/or sealed before August 15, 2012 to comply with the minimum 4 inch maintained asphalt cover.

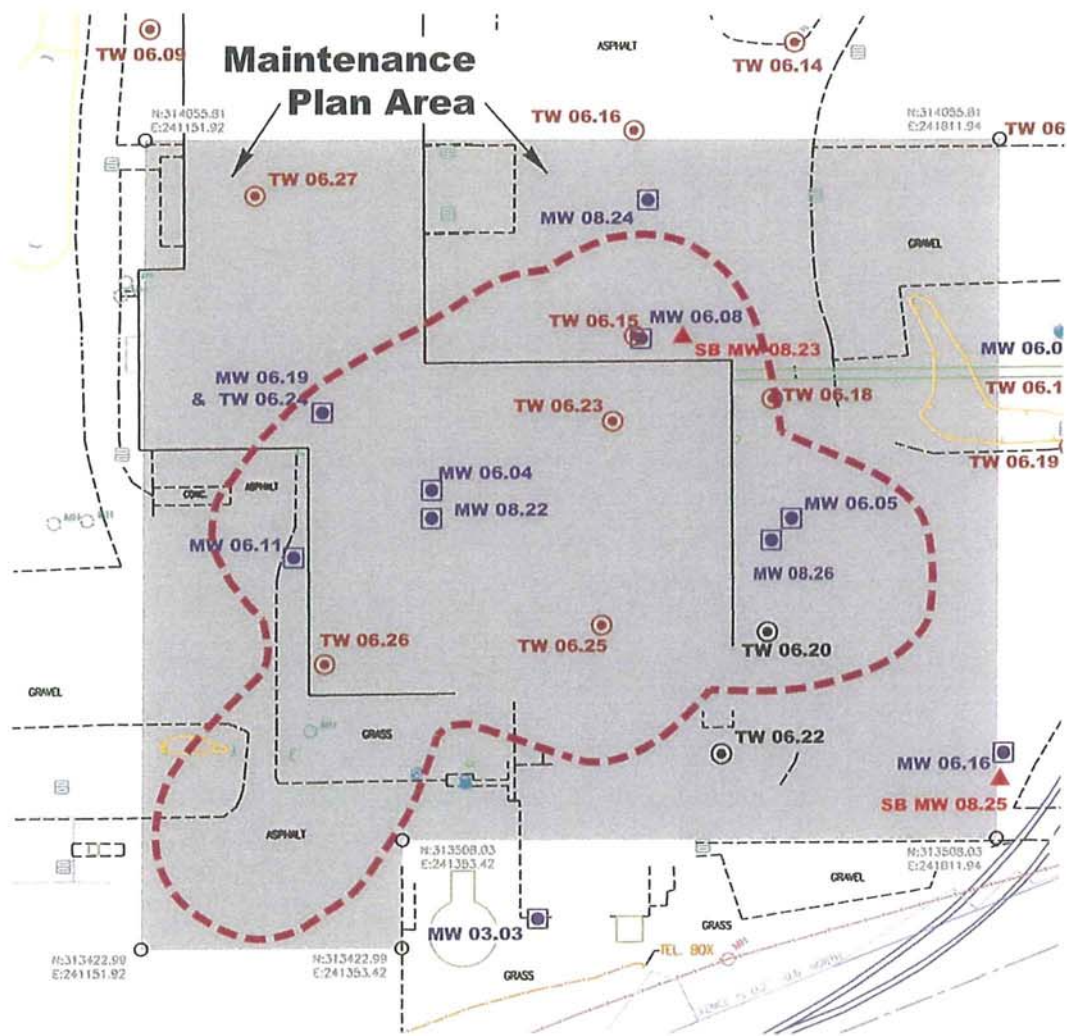

Asphalt surfaces will be maintained/repared in accordance with the Wisconsin Department of Transportation Specifications for Asphaltic Pavement/Surface (Sections 450 and 465), reference Annotated 2012 Edition of Standard Specifications. (Attachment No. 2)

Existing surface structures (concrete for Building 5C and those asphalt areas surrounding Building 5C) as defined within the AOC are those structures that cover earth within the area shown on the Figure entitled: PAH/VOC/CVOC Contour September/December 2011 & January 2012 (Light Grey). These surface structures are subject to the controls as referenced, and may not be removed with written receipt of authorization from the WI DNR.

The concrete/asphalt over the contaminated groundwater and soil regimes serve as a barrier to prevent direct human contact with residual soil contamination that might otherwise pose a threat to human health. These concrete/asphalt cover(s) also act as a partial infiltration barrier to minimize future soil-to-groundwater contamination migration that would violate the groundwater standards in ch. NR 140, Wisconsin Administrative Code. In addition, the concrete floor within Building 5C acts as a barrier to prevent accumulation of chlorinated solvents/PAHs within the ambient air space of said Building 5C. Based on the current and future use of the property, the barrier(s) should function as intended unless disturbed.

Annual Inspection

The concrete/asphalt structures overlying the contaminated groundwater and soil regimes as depicted in the flowing figures entitled (VOC Contour September 2011, and Summary of PAH Concentrations Groundwater Regime -2011) and/or as outlined in light grey on the figure entitled (PAH/VOC/CVOC Contour September/December 2011 & January 2012,) will be inspected once a year, normally in the spring after all snow and ice is gone (*i.e. no later than June 15 of each year*), for deterioration, cracks and other potential problems that can cause additional surface water infiltration/subsurface erosion/ or allow human exposure to the underlying soils.

The inspections will be performed by SKANA ALUMINUM COMPANY (property owner) or their designated engineering representative. The inspection(s) will be performed to evaluate damage due to settling, exposure to the weather, wear from traffic, increasing age and other factors. Any area where soils have become or are likely to become exposed and/or where surface water infiltration is being or likely to become exacerbated will be documented. A log of the inspections and any repairs will be maintained by the SKANA ALUMINUM COMPANY. The Inspection Log is included as Exhibit B. The Inspection Log will include recommendations for necessary repair of any areas where underlying soils are exposed [and] where infiltration from the surface will not be effectively minimized. Once repairs are completed, (i.e. before August 15 of each year) they will be documented/photographed and incorporated in the Inspection Log/ Maintenance Plan. A copy of the Inspection Log will be kept at the subject property (SKANA ALUMINUM COMPANY, 2009 Mirro Drive, Manitowoc, WI) and be available for inspection by WI DNR representatives upon their request. In addition, no later than September 1 of each year a copy of the Inspection Log, photographic documentation of repairs/condition of the barrier(s)/cover(s)/surface structure(s) and general statement

documenting the condition of said barrier(s)/cover(s)/surface structure(s) will be forward by SKANA ALUMINUM COMPANY to the WI DNR:

State of Wisconsin
Department of Natural Resources
Northeast Regional Headquarters
Remediation & Redevelopment Program
2984 Shawano Avenue
Green Bay, WI 54313-6727
Phone: (920) 662-5100

If problems are noted during the annual inspections or at any other time during the year, repairs will be scheduled as soon as practical.

- Exterior - Repairs can include patching and filling or larger resurfacing or construction operations.
- Interior - Repairs can include industrial epoxy crack sealing (full depth), patching or larger resurfacing or construction.

In the event that necessary maintenance activities expose the underlying soil, or maintenance crews enter into a defined confined space which is below the ground surface elevation, SKANA ALUMINUM COMPANY will inform maintenance workers of the direct contact exposure hazard, vapor potential and provide them with appropriate personal protection equipment ("PPE"). The SKANA ALUMINUM COMPANY will also sample any soil that is excavated from the AOC prior to conducting off-site disposal activities to ascertain data concerning the levels of any residual contamination. The soil will be treated, stored and disposed of by SKANA ALUMINUM COMPANY in accordance with applicable local, state and federal law.

In the event the concrete/asphalt materials overlying the contaminated groundwater/soil regimes are removed or required replacement, the replacement barrier must be of equal impervious and consistent with the minimum thickness specified in this document. Any replacement barrier will be subject to the same maintenance and inspection guidelines as outlined in this Maintenance Plan unless indicated otherwise by the WI DNR or its successor. SKANA ALUMINUM COMPANY, in order to maintain the integrity of the concrete/asphalt barrier(s), will maintain a copy of this Maintenance Plan on-site and make it available to all interested parties (i.e. on-site employees, contractors, future property owners, etc.) for viewing.

Prohibition of Activities and Notification of WI DNR

These prohibitions may not be violated unless prior written approval has been obtained from the **WI DNR** on any portion of the property defined as part of the AOC which supports a surface cover/barrier structure which limits human exposure to the underlying residual contaminated and limits surface water infiltration:

- removal of the existing barrier
- replacement with another barrier (that does not comply with this Maintenance Plan)
- excavating or grading of the land surface
- filling on capped or paved areas
- plowing for agriculture
- installation of wells for the purpose of generating a water source

It is herein noted that this written approval requirement, does not justify the owner/responsible parties to not undertake actions should an immediate dangerous environment/condition develop in the AOC which poses an immediate risk to the general public or the environment. Under these conditions emergency trained personnel may take actions to protect the general public and the environment, but concurrently SKANA ALUMINUM COMPANY administration (property owner) must take immediate actions (defined as 24 hours) to notify the WI DNR of said emergency condition.

Amendment or Withdrawal of Maintenance Plan

This Maintenance Plan can be amended or withdrawn by the SKANA ALUMINUM COMPANY (current property owner) and its successors with the written approval of WI DNR.

Maintenance Plan Contact Information

The following contact information is herein provided to WI DNR. In the event the contact information must be amendments, the existing property owner or the contact listed below is responsible for notifying the WI DNR within +/-15 days of the amendment.

KEEP THIS DOCUMENT WITH YOUR PROPERTY RECORDS

SUBJECT: Final Case Closure with Continuing Obligations
Skana (K&V) "Site Wide" miscellaneous historic impacts
2009 Mirro Drive, Manitowoc, WI
WDNR BRRTS Activity #: 02-36-550138

Dear Mr. Kazmierczak:

The Department of Natural Resources (DNR) considers the "Site Wide" site closed, with continuing obligations. No further investigation or remediation is required at this time. However, you and future property owners must comply with the continuing obligations as explained in the conditions of closure in this letter. Please read over this letter closely to ensure that you comply with all conditions and other on-going requirements. Provide this letter and the attached maintenance plan to anyone who purchases this property from you.

This final closure decision is based on the correspondence and data provided, and is issued under ch. NR 726, Wisconsin Administrative Code. The Northeast Region Closure Committee reviewed this site for closure on Dec 2, 2011, January 13 and 20, 2012. The Closure Committee reviews environmental remediation cases for compliance with state laws and standards to maintain consistency in the closure of these cases. The project manager, Annette Weissbach, discussed the conditional closure requirements with your Consultant Mike Hebert and the following documents have been submitted.

- NR 141 Wis. Adm. Code Abandonment Forms for monitoring wells: MW4.1, MW4.2, MW4.3, MW06.14, MW06.18, MW06.07, MW06.17, MW06.12, MW06.21, MW13.1, MW06.10, MW03.01, MW06.13, MW06.06, MW06.15, MW06.11, MW03.03, MW06.09, MW06.04, MW06.20, TW06.01, TW06.02, TW06.03, TW06.04, TW06.05, TW06.06, TW06.07, TW06.08, TW06.09, TW06.10, TW06.11, TW06.12, TW06.13, TW06.15, TW06.16, TW06.17, TW06.27, TW06.28, TW06.29, TW06.30, TW11A, TW11B, TW11C, 14/15 SB1, 14/15/SB/2 SB-3/MW-3, and 11/13/17 SB-1
- Cap maintenance Plan: Joint maintenance plan with BRRTS case #02-36-544601

The Property is a former Mirro-Newell Rubbermaid facility that was built in the early 1960-70s with 575,000 ft² of buildings under manufacturing. The Aluminum rolling mill is operated by Skana and Tramontina leases building space for the production of aluminum pots and pans. Over the last eight years, several Phase I, Phase II, and site investigations have been completed which included soil and groundwater sampling from dozens of soil borings, 31 monitoring wells and 14 temporary wells. Site wide impacts associated with industrial activities at the site include common contaminants such as polycyclic aromatic hydrocarbons, arsenic, aluminum and trace detect of trichloroethylene. Limited areas of contaminated soil were excavated and properly disposed of.

The conditions of closure and continuing obligations required were based on the property being used for **industrial purposes**.

Continuing Obligations

The continuing obligations for this site are summarized below. Further details on actions required are found in the section **Closure Conditions**.

- Groundwater contamination (arsenic, aluminum, polycyclic aromatic hydrocarbons) is present above ch. NR 140 Wis Adm. Code enforcement standards.
- One or more monitoring wells were not located and must be properly filled and sealed if found.
- Building 5C and asphaltic pavement must be maintained over contaminated soil and the state must approve any changes to this barrier.
- Before the land use may be changed from industrial to non-industrial, additional environmental work must be completed.

GIS Registry

This site will be listed on the Remediation and Redevelopment Program's internet accessible Geographic Information System (GIS) Registry, to provide notice of residual contamination and of any continuing obligations. DNR approval prior to well construction or reconstruction is required for all sites shown on the GIS Registry, in accordance with s. NR 812.09(4) (w), Wis. Adm. Code. To obtain approval, complete and submit Form 3300-254 to the DNR Drinking and Groundwater program's regional water supply specialist. This form can be obtained on-line at <http://dnr.wi.gov/org/water/dwg/3300254.pdf> or at the web address listed below for the GIS Registry.

All site information is also on file at the Northeast Regional DNR office, at 2984 Shawano Ave in Green Bay. This letter and information that was submitted with your closure request application, including the maintenance plan, will be included on the GIS Registry in a PDF attachment. To review the site on the GIS Registry web page, visit the RR Sites Map page at <http://dnr.wi.gov/org/aw/rr/gis/index.htm>.

Prohibited Activities

Certain activities are prohibited at closed sites because maintenance of a barrier is intended to prevent contact with any remaining contamination. When a barrier is required, the condition of closure requires notification of the DNR before making a change, in order to determine if further action is needed to maintain the protectiveness of the remedy employed. The following activities are prohibited on any portion of the property where the building foundation and pavement is required, as shown on the **attached map**, unless prior written approval has been obtained from the DNR.

- removal of the existing barrier;
- replacement with another barrier;
- excavating or grading of the land surface;
- filling on covered or paved areas;
- plowing for agricultural cultivation;
- construction or placement of a building or other structure;
- changing the use or occupancy of the property to a residential exposure setting, which may include certain uses, such as single or multiple family residences, a school, day care, senior center, hospital, or similar residential exposure settings;

Closure Conditions

Compliance with the requirements of this letter is a responsibility to which you and any subsequent property owners must adhere. DNR staff will conduct periodic prearranged inspections to ensure that the conditions included in this letter and the attached maintenance plans are met. If these requirements are not followed, the DNR may take enforcement action under s. 292.11, Wisconsin Statutes to ensure compliance with the specified requirements, limitations or other conditions related to the property.

Residual Groundwater Contamination (ch. NR 140, Wis. Adm. Code)

Groundwater contamination greater than enforcement standards is present on this property as shown on the attached maps. If you intend to construct a new well, or reconstruct an existing well, you'll need prior DNR approval.

Residual Soil Contamination (ch. NR 718, or ch. 289, Stats.; chs. 500 to 536, Wis. Adm. Code)

Due to the long term use of this large property for manufacturing purposes residual soil contamination remains various locations. Anyone planning any future excavation activity should know that contaminated soil and groundwater may be encountered and appropriate action should be taken according to the conditions encountered. If conditions warrant and sampling confirms that contamination is present, the property owner at the time of excavation will need to determine whether the material is considered solid or hazardous waste and ensure that any storage, treatment or disposal is in compliance with applicable standards and rules. In addition, all current and future owners and occupants of the property need to be aware that excavation of the contaminated soil may pose an inhalation or other direct contact hazard and as a result special precautions may need to be taken to prevent a direct contact health threat to humans.

Monitoring wells that could not be properly filled and sealed (ch. NR 141, Wis. Adm. Code)

Temporary monitoring well(s) TW-06.01, TW-06.03 TW-06.04, TW-06.05, TW06.11, TW-06.17 located on the Skana Aluminum property as shown on the attached map, could not be properly filled and sealed because they could not be found. Your consultant made a reasonable effort to locate the wells and to determine whether they were properly filled and sealed, but was unsuccessful. You may be held liable for any problems associated with the monitoring wells if they create a conduit for contaminants to enter groundwater. If any of the groundwater monitoring wells are found, the then current owner of the property on which the well is located is required to notify the DNR, to properly fill and seal the wells and to submit the required documentation to the DNR.

Cover or Barrier (s. 292.12 (2) (a), Wis. Stats)

Building 5C and pavement that exists in the location shown on the attached map shall be maintained in compliance with the **attached maintenance plan** in order to minimize the infiltration of water and prevent additional groundwater contamination that would violate the groundwater quality standards in ch. NR 140, Wis. Adm. Code.

A cover or barrier for industrial land uses may not be protective if use of the property were to change such that a residential exposure would apply. This may include, but is not limited to single or multiple family residences, a school, day care, senior center, hospital or similar settings. Before using the property for such purposes, you must notify the DNR to determine if additional response actions are warranted. A request may be made to modify or replace a cover or barrier. The replacement or modified cover or barrier must be protective of the revised use of the property, and must be approved in writing by the DNR prior to implementation. The **attached maintenance plan and inspection log** are to be kept up-to-date and on-site. Submit the inspection log to the DNR only upon request.

Chapter NR 140, Wis. Adm. Code Exemption

Recent groundwater monitoring data at this site indicates that for trichloroethylene at monitoring well MW 4.2 previously located directly east of Building 2, the Rolling Mill, and at contaminant levels exceed the NR 140 preventive action limit (PAL) but are below the enforcement standard (ES). The DNR may grant an exemption to a PAL for a substance of public health concern, other than nitrate, pursuant to s. NR 140.28 (2) (b), Wis. Adm. Code, if all of the following criteria are met:

1. The measured or anticipated increase in the concentration of the substance will be minimized to the extent technically and economically feasible.
2. Compliance with the PAL is either not technically or economically feasible.
3. The enforcement standard for the substance will not be attained or exceeded at the point of standards application. [Note: at this site the point of standards application is all points where groundwater is monitored.]
4. Any existing or projected increase in the concentration of the substance above the background concentration does not present a threat to public health or welfare.

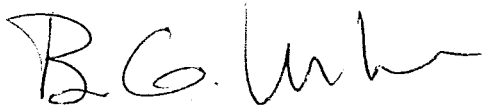

Based on the information you provided, the DNR believes that these criteria have been or will be met. Therefore, pursuant to s. NR 140.28, Wis. Adm. Code, an exemption to the PAL is granted for trichloroethylene at the location of former monitoring well MW 4.2. Please keep this letter, because it serves as your exemption.

DNR fact sheet, "Continuing Obligations for Environmental Protection", RR-819, is included with this letter to help explain a property owner's responsibility for continuing obligations on their property. If the fact sheet is lost, you may obtain a copy at <http://dnr.wi.gov/org/aw/rr/archives/pubs/RR819.pdf>.

Please send written notifications in accordance with the above requirements to the DNR's Northeast Regional office, to the attention of the Remediation & Redevelopment Environmental Program Associate.

We appreciate your efforts to restore the environment at this site and enroll the property in the Voluntary Party Liability Exemption (VPLE) process. Your Certificate of Completion will be issued in the next several weeks. If you have any questions regarding this closure decision or anything outlined in this letter, please contact Annette Weissbach at 920-662-5165.

Sincerely,

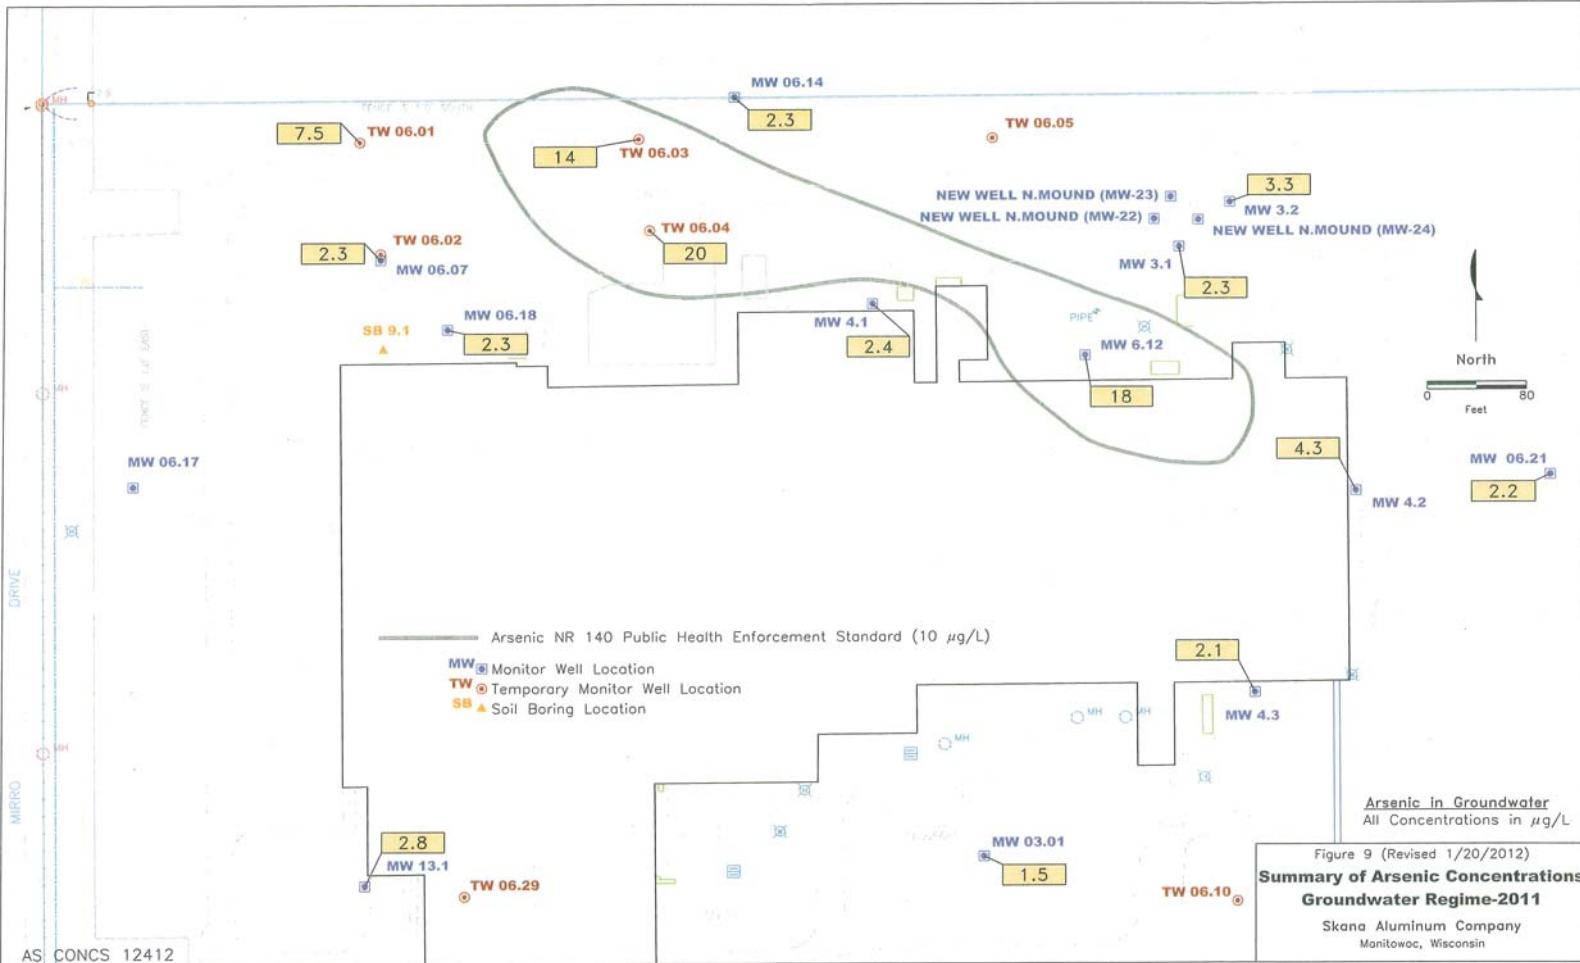

A handwritten signature in black ink, appearing to read "B.G. Urban". The signature is fluid and cursive, with the first name "Bruce" and last name "Urban" clearly distinguishable.

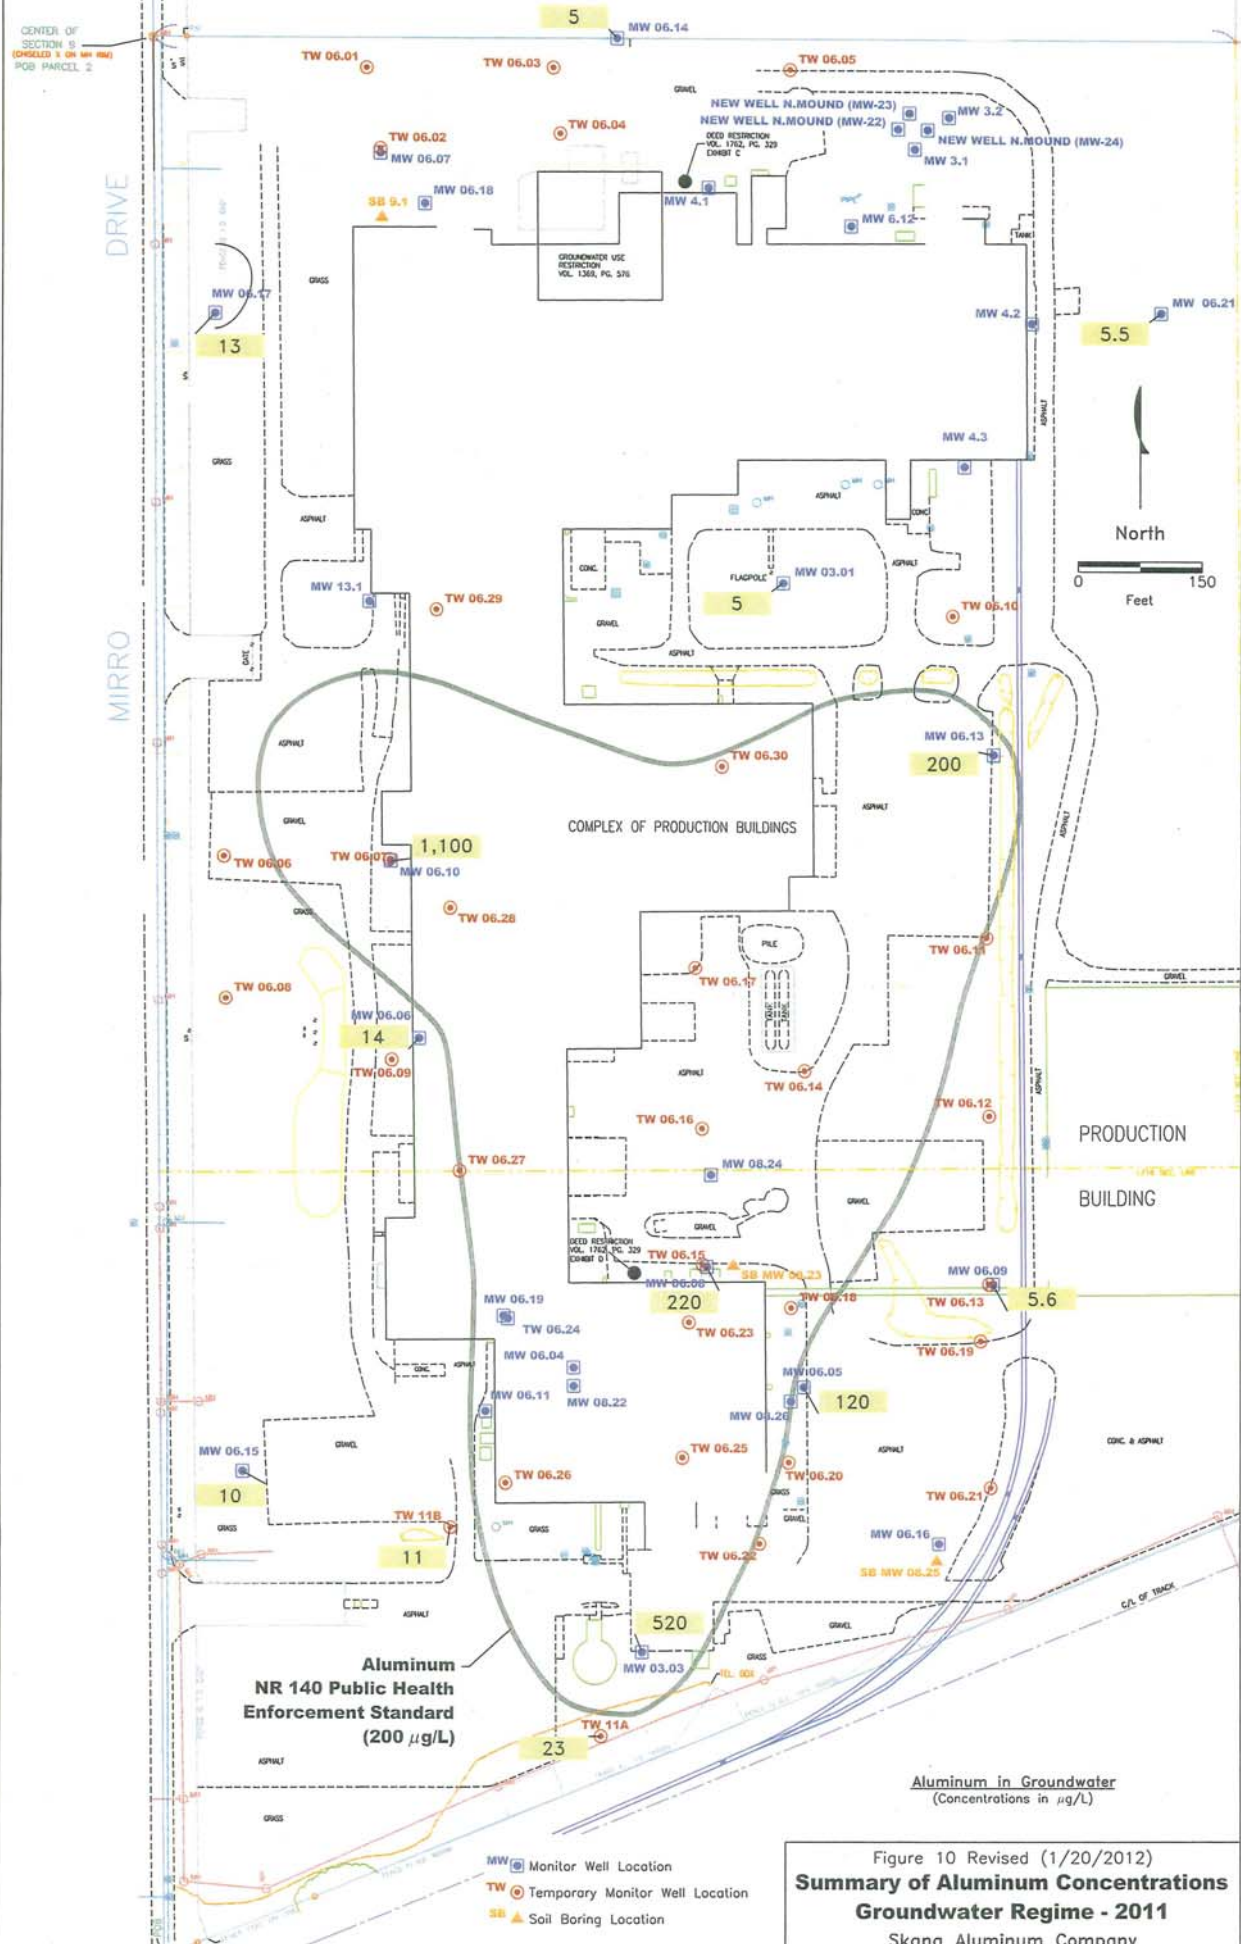

Bruce Urban Air and Waste Division Leader

Facility ID# 436106110

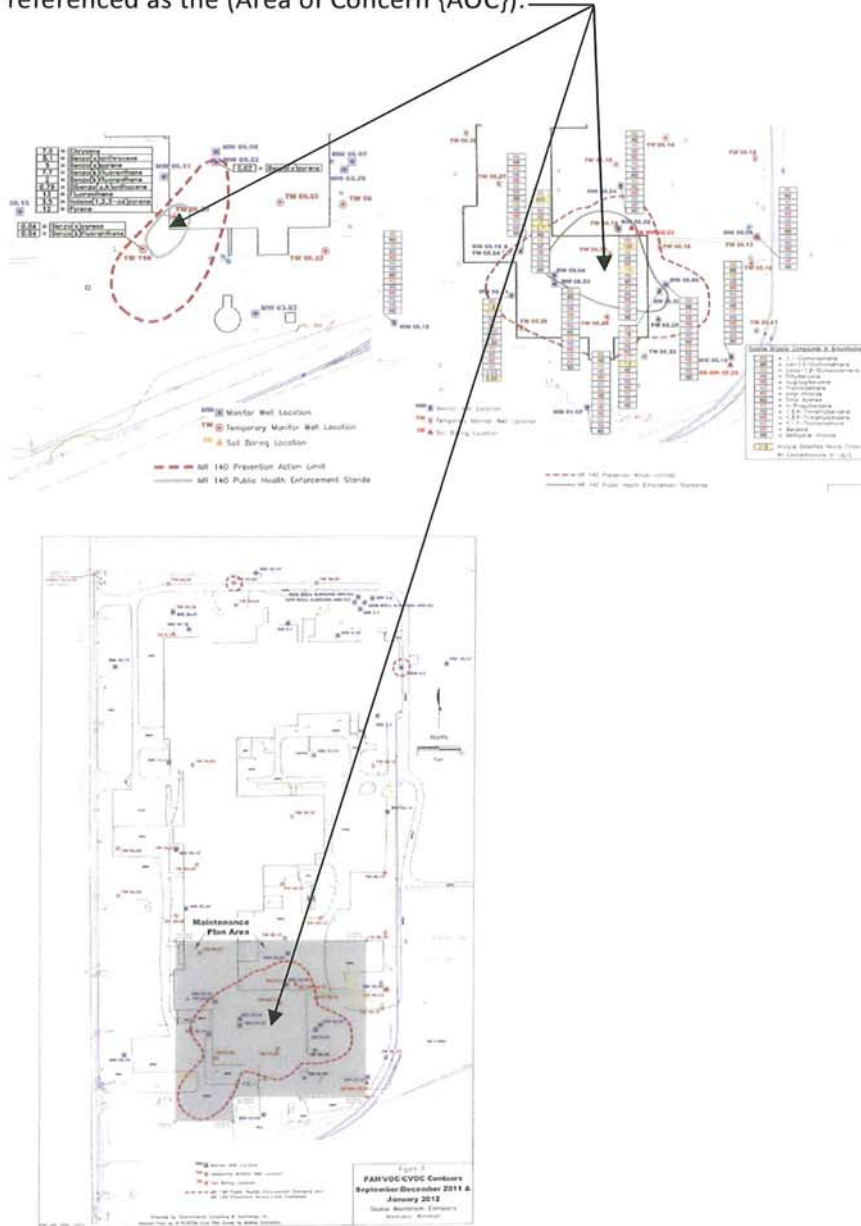

Legal Description: All that part of the Southeast Quarter (SE ¼) of Section Nine (9) North, Range Twenty-four (24) East, lying North of the Chicago and Northwestern Railway Company right of way, partially in the City of Manitowoc and partially in the Town of Manitowoc, County of Manitowoc, State of Wisconsin, EXCEPTING THEREFROM Lot One (1) of a Certified Survey recorded in Volume 24 of Certified Survey Maps, Page 63 as Document No.967193. ALSO EXCEPTING portion conveyed for street purposes by Quit Claim Deeds recorded in Volume 1995, Page 230, Document No. 969539 and in Volume 1995, Page 231 as Document No. 969540.

The Southwest Quarter (SW ¼) of the Northeast Quarter (NE ¼) and the South Half (S ½) of the Northwest Quarter (NW ¼) of the Northeast Quarter (NE ¼) of Section Nine (9), Township Nineteen (19) North, Range Twenty-four (24) East, in the City of Manitowoc, County of Manitowoc, State of Wisconsin. EXCEPTING portion conveyed for street purposes by Quit Claim Deed recorded in Volume 1995, Page 230, as Document No. 969539.

Introduction

This document (BARRIER/CAP MAINTENANCE PLAN) is herein referenced as the **Maintenance Plan** for the existing concrete floors associated with Building 5C and those existing asphalt pavement areas surrounding Building 5C. These structures (concrete floors/asphalt pavement) are referenced as engineering controls (vapor-contact barrier/water infiltration cover) at the referenced subject property in accordance with the requirements of NR 724.13(2), Wisconsin Administrative Code. The maintenance activities relate to the existing (concrete floors associated with Building 5C and those asphalt pavement areas surrounding Building 5C) occupying the area over the residual contaminated groundwater/soil regimes associated with WI DNR Repair Activities #02-36-544601/02-36-550138, is hereafter referenced as the (Area of Concern {AOC}).

No contamination associated with this Maintenance Plan has extended off site is likely to migrate off site under the current conditions.

More site-specific information about this property may be found in:

Description of Contamination

The shallow unconsolidated/vadose zone soils and saturated zone(s) within the AOC have been identified as contaminated by one or more of the following:

CAS 56553	Benzo(a)anthracene	CAS 50328	Benzo(a)pyrene
CAS 205992	Benzo(b)fluoranthene	CAS 207089	Benzo(k)fluoranthene
CAS 107-06-2	Cis-1, 2-Dichloroethene	CAS 218019	Chrysene
CAS 53703	Dibenzo(a,h)anthracene	CAS 193395	Indeno(1,2,3-cd)pyrene
CAS 129000	Pyrene	CAS 79016	Trichloroethylene
CAS 75014	Vinyl Chloride		

The unconsolidated vadose zone soils are defined as those soils in the AOC which are not saturated with groundwater below the elevation of (+/- 605 ft MSL) and limited to a maximum depth of 30 ft below ground surface or 575 ft MSL). Saturated zone(s) or those sediments which have the potential to produce non-potable and/or potable water (groundwater) within the AOC defined in the unconsolidated soils above the elevation of 575 ft MSL.

The following figures are presented as Exhibit A to support and define the AOC:

- Well Locations, Screen Depths & Soil Sample Locations
(All wells points within the AOC have been sealed before the Initiation date of this Maintenance Plan)
- VOC Contour September 2011
NR 140 Public Health Enforcement Standards
NR 140 Prevention Action Limits
- Summary of PAH Concentrations Groundwater Regime -2011
NR 140 Public Health Enforcement Standards
NR 140 Prevention Action Limits
- PAH/VOC/CVOC Contour September/December 2011 & January 2012
Inspection Area for this Maintenance Plan, (Light Grey)

Description of the Surface Structures to be Maintained

The concrete floor/surface structures supporting Building 5C and those existing asphalt pavement areas surrounding Building 5C are herein described and consists of the following matrix:

Building 5C Floor/Surface Structures Supporting Building 5C

Existing Floors (typical 8-12 inches of concrete {3,200 psi})
(minimum maintained cover 6 inch of concrete)

Effective February 15, 2012, an inspection of the concrete floors within the AOC will be conducted and any voids not occupied by sealed equipment will be sealed to comply with the minimum 6 inch maintained concrete cover.

Concrete surfaces will be maintained/repared in accordance with the Wisconsin Department of Transportation Specifications for Concrete Pavement (Section 415), reference Annotated 2012 Edition of Standard Specifications. (Attachment No. 1)

Asphalt Pavement Areas Surrounding Building 5C

Asphalt Pavement (typical 4 inches of asphalt cover)
(minimum thickness 4 inches of asphalt)

Effective June 15, 2012, an inspection of the asphalt pavement within the AOC will be conducted and any voids through the pavement will be repaired and/or sealed before August 15, 2012 to comply with the minimum 4 inch maintained asphalt cover.

Asphalt surfaces will be maintained/repared in accordance with the Wisconsin Department of Transportation Specifications for Asphaltic Pavement/Surface (Sections 450 and 465), reference Annotated 2012 Edition of Standard Specifications. (Attachment No. 2)

Existing surface structures (concrete for Building 5C and those asphalt areas surrounding Building 5C) as defined within the AOC are those structures that cover earth within the area shown on the Figure entitled: PAH/VOC/CVOC Contour September/December 2011 & January 2012 (Light Grey). These surface structures are subject to the controls as referenced, and may not be removed with written receipt of authorization from the WI DNR.

The concrete/asphalt over the contaminated groundwater and soil regimes serve as a barrier to prevent direct human contact with residual soil contamination that might otherwise pose a threat to human health. These concrete/asphalt cover(s) also act as a partial infiltration barrier to minimize future soil-to-groundwater contamination migration that would violate the groundwater standards in ch. NR 140, Wisconsin Administrative Code. In addition, the concrete floor within Building 5C acts as a barrier to prevent accumulation of chlorinated solvents/PAHs within the ambient air space of said Building 5C. Based on the current and future use of the property, the barrier(s) should function as intended unless disturbed.

Annual Inspection

The concrete/asphalt structures overlying the contaminated groundwater and soil regimes as depicted in the flowing figures entitled (VOC Contour September 2011, and Summary of PAH Concentrations Groundwater Regime -2011) and/or as outlined in light grey on the figure entitled (PAH/VOC/CVOC Contour September/December 2011 & January 2012,) will be inspected once a year, normally in the spring after all snow and ice is gone (*i.e. no later than June 15 of each year*), for deterioration, cracks and other potential problems that can cause additional surface water infiltration/subsurface erosion/ or allow human exposure to the underlying soils.

The inspections will be performed by SKANA ALUMINUM COMPANY (property owner) or their designated engineering representative. The inspection(s) will be performed to evaluate damage due to settling, exposure to the weather, wear from traffic, increasing age and other factors. Any area where soils have become or are likely to become exposed and/or where surface water infiltration is being or likely to become exacerbated will be documented. A log of the inspections and any repairs will be maintained by the SKANA ALUMINUM COMPANY. The Inspection Log is included as Exhibit B. The Inspection Log will include recommendations for necessary repair of any areas where underlying soils are exposed [and] where infiltration from the surface will not be effectively minimized. Once repairs are completed, (i.e. before August 15 of each year) they will be documented/photographed and incorporated in the Inspection Log/ Maintenance Plan. A copy of the Inspection Log will be kept at the subject property (SKANA ALUMINUM COMPANY, 2009 Mirro Drive, Manitowoc, WI) and be available for inspection by WI DNR representatives upon their request. In addition, no later than September 1 of each year a copy of the Inspection Log, photographic documentation of repairs/condition of the barrier(s)/cover(s)/surface structure(s) and general statement

documenting the condition of said barrier(s)/cover(s)/surface structure(s) will be forward by SKANA ALUMINUM COMPANY to the WI DNR:

State of Wisconsin
Department of Natural Resources
Northeast Regional Headquarters
Remediation & Redevelopment Program
2984 Shawano Avenue
Green Bay, WI 54313-6727
Phone: (920) 662-5100

If problems are noted during the annual inspections or at any other time during the year, repairs will be scheduled as soon as practical.

- Exterior - Repairs can include patching and filling or larger resurfacing or construction operations.
- Interior - Repairs can include industrial epoxy crack sealing (full depth), patching or larger resurfacing or construction.

In the event that necessary maintenance activities expose the underlying soil, or maintenance crews enter into a defined confined space which is below the ground surface elevation, SKANA ALUMINUM COMPANY will inform maintenance workers of the direct contact exposure hazard, vapor potential and provide them with appropriate personal protection equipment ("PPE"). The SKANA ALUMINUM COMPANY will also sample any soil that is excavated from the AOC prior to conducting off-site disposal activities to ascertain data concerning the levels of any residual contamination. The soil will be treated, stored and disposed of by SKANA ALUMINUM COMPANY in accordance with applicable local, state and federal law.

In the event the concrete/asphalt materials overlying the contaminated groundwater/soil regimes are removed or required replacement, the replacement barrier must be of equal impervious and consistent with the minimum thickness specified in this document. Any replacement barrier will be subject to the same maintenance and inspection guidelines as outlined in this Maintenance Plan unless indicated otherwise by the WI DNR or its successor. SKANA ALUMINUM COMPANY, in order to maintain the integrity of the concrete/asphalt barrier(s), will maintain a copy of this Maintenance Plan on-site and make it available to all interested parties (i.e. on-site employees, contractors, future property owners, etc.) for viewing.

Prohibition of Activities and Notification of WI DNR

These prohibitions may not be violated unless prior written approval has been obtained from the **WI DNR** on any portion of the property defined as part of the AOC which supports a surface cover/barrier structure which limits human exposure to the underlying residual contaminated and limits surface water infiltration:

- removal of the existing barrier
- replacement with another barrier (that does not comply with this Maintenance Plan)
- excavating or grading of the land surface
- filling on capped or paved areas
- plowing for agriculture
- installation of wells for the purpose of generating a water source

It is herein noted that this written approval requirement, does not justify the owner/responsible parties to not undertake actions should an immediate dangerous environment/condition develop in the AOC which poses an immediate risk to the general public or the environment. Under these conditions emergency trained personnel may take actions to protect the general public and the environment, but concurrently SKANA ALUMINUM COMPANY administration (property owner) must take immediate actions (defined as 24 hours) to notify the WI DNR of said emergency condition.

Amendment or Withdrawal of Maintenance Plan

This Maintenance Plan can be amended or withdrawn by the SKANA ALUMINUM COMPANY (current property owner) and its successors with the written approval of WI DNR.

Maintenance Plan Contact Information

The following contact information is herein provided to WI DNR. In the event the contact information must be amendments, the existing property owner or the contact listed below is responsible for notifying the WI DNR within +/-15 days of the amendment.

KEEP THIS DOCUMENT WITH YOUR PROPERTY RECORDS

SUBJECT: Final Case Closure
Skana Aluminum (K&V) North Mound (PCB)
Northeast of Rolling Mill at 2009 Mirro Drive, Manitowoc Wisconsin
WDNR Environmental Repair Activity # 02-36-555268, VPLE #06-36-556282

Dear Mr. Kazmierczak:

The Department considers this case closed and no further investigation or remediation is required at this time. Based on the correspondence and data provided, it appears that your case meets the closure requirements in ch. NR 726, Wisconsin Administrative Code.

On December 2, 2011, the Northeast Region Closure Committee reviewed your request for closure of the case described above. The Committee reviews environmental remediation cases for compliance with state rules and statutes to maintain consistency in the closure of these cases. On December 6, 2011, you were notified that the Closure Committee had granted conditional closure to this case.

On January 9, 2012, the Department received information or documentation indicating that you have complied with the requirements for final closure. The following documents were submitted.

- NR 141 Wis. Adm Code Monitoring well abandonment forms for wells MW22, MW23, MW24, MW3.1 and MW3.2
- Post Excavation Field Diagram showing base and sidewall soil sample collection sites

GIS Registry

The conditions of case closure set out below in this letter require that this site be listed on the Remediation and Redevelopment Program's GIS Registry. The specific reason is summarized below:

- Groundwater impacted by residual polychlorinated biphenyl (PCB) contamination greater than enforcement standards set forth in ch. NR140, Wis. Adm. Code, is present on this property, specifically as measured in groundwater at the location of the former monitoring well MW-23, as shown on the **attached map**.

This letter and information that was submitted with your closure request application will be included on the GIS Registry. To review the sites on the GIS Registry web page, visit the RR Sites Map page at: <http://dnr.wi.gov/org/aw/rr/gis/index.htm>. If the property is listed on the GIS Registry because of remaining

contamination and you intend to construct or reconstruct a well, you will need prior Department approval in accordance with s. NR 812.09(4) (w), Wis. Adm. Code. To obtain approval, Form 3300-254 needs to be completed and submitted to the DNR Drinking and Groundwater program's regional water supply specialist. This form can be obtained on-line <http://dnr.wi.gov/org/water/dwg/3300254.pdf> or at the web address listed above for the GIS Registry.

We appreciate your efforts to restore the environment at this site and enroll the property in the Voluntary Party Liability Exemption (VPLE) process. Your Certificate of Completion will be issued in the next several weeks. If you have any questions regarding this closure decision or anything outlined in this letter, please contact Annette Weissbach at 920-662-5165.

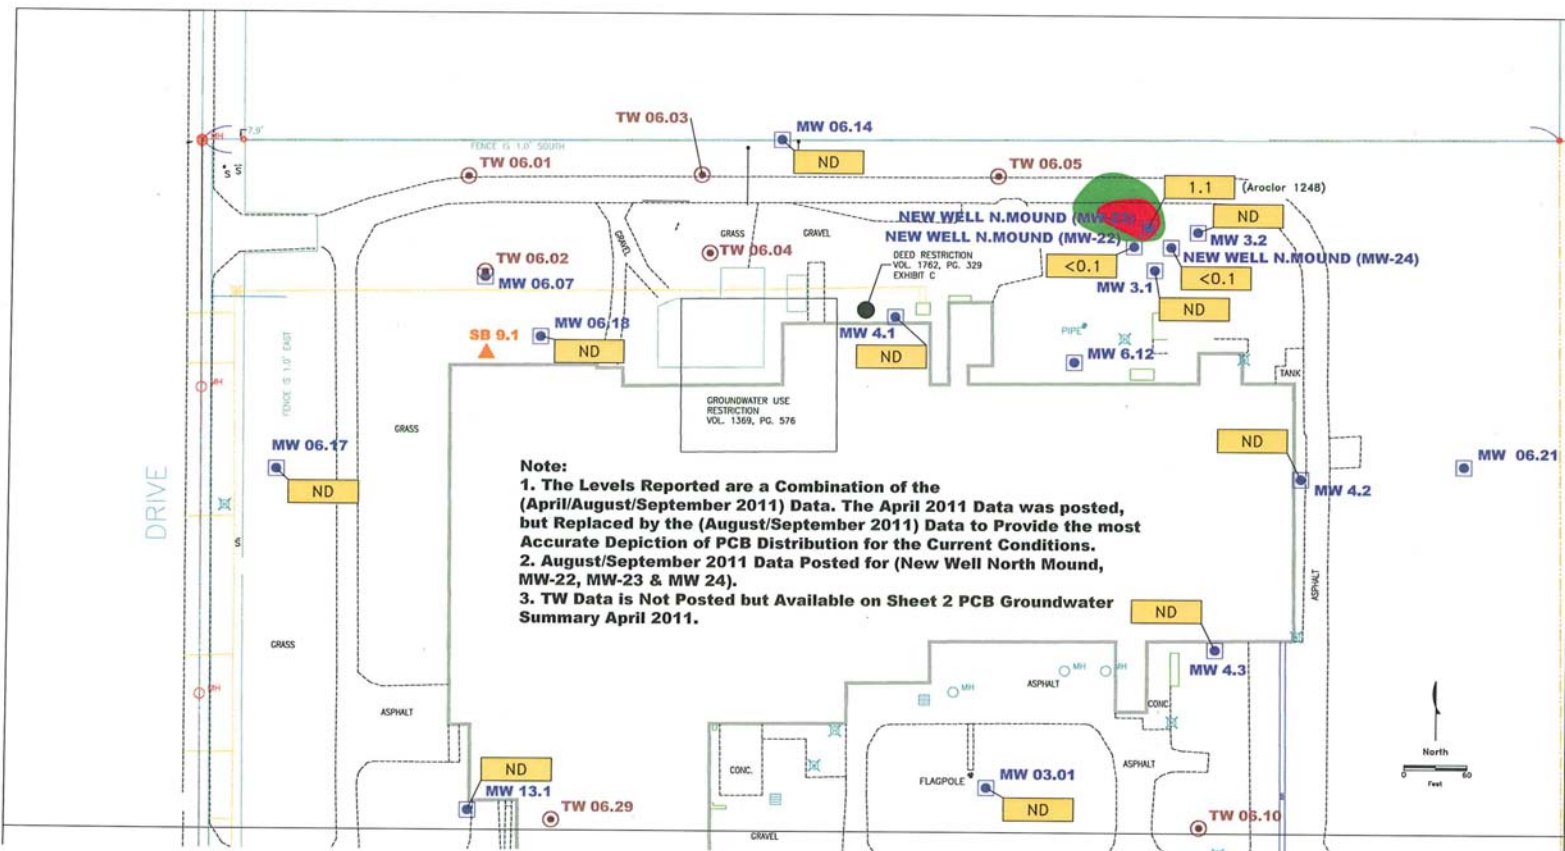

Sincerely,

Bruce Urben Air and Waste Division Leader
Northeast Region

SUBJECT: Final Case Closure by Closure Committee with Conditions met
Mirro Plant #2 2401 Mirro Drive, Manitowoc, WI
WDNR BRRTS #: 02-36-220607

Dear Mr. Hauck:

On January 8, 2002, your site as described above was reviewed for closure by the Northeast Region Closure Committee. This committee reviews environmental remediation cases for compliance with state laws and standards to maintain consistency in the closure of these cases. On January 31, 2002, you were notified that the Closure Committee had granted conditional closure to this case.

On January 15, 2003, the Department received correspondence indicating that Mirro Company has complied with the conditions of closure. The conditions of Closure included filing a soil deed restriction stating that inaccessible soil remains at the site in the area of soil excavation. The restriction requires that a soil barrier remain over the remaining soil contamination and that the soil barrier be maintained in accordance with a June 11, 2002, Maintenance Plan prepared by Northern Environmental. Based on the correspondence and data provided, it appears that your case has been remediated to Department standards in accordance with s. NR 726.05, Wis. Adm. Code. The Department considers this case closed and no further investigation, remediation or other action is required at this time.

Your site will be listed on the DNR Remediation and Redevelopment GIS Registry of Closed Remediation Sites. Information that was submitted with your closure request application will be included on the registry. To review the sites on the GIS Registry web page, visit <http://gomapout.dnr.state.wi.us/org/at/et/geo/gwur/index.htm>

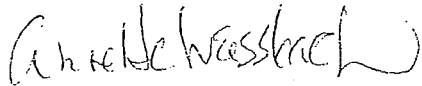

Mr. Charles Hauck, January 31, 2003

Page 2

Please be aware that this case may be reopened pursuant to s. NR 726.09, Wis. Adm. Code, if additional information regarding site conditions indicates that contamination on or from the site poses a threat to public health, safety or welfare, or the environment.

The Department appreciates your efforts to restore the environment at this site. If you have any questions regarding this letter, please contact me at 920-492-5865.

Sincerely,

A handwritten signature in black ink that reads "Annette Weissbach". The signature is written in a cursive style with a large, sweeping initial "A".

Declaration of Restrictions

STATE OF WISCONSIN)
) ss
COUNTY OF MANITOWOC)

Parcel Identification Number (PIN)

WHEREAS, Newell Operating Company (formerly known as the Aluminum Goods Manufacturing Company, a New Jersey Corporation) is the owner of the above-described property.

WHEREAS, one or more discharges have occurred on this property. Contaminated soils exist on this property at or near the locations as shown in Exhibit A, Figure 1 Site Layout, Mirro Company

Specific types, concentrations, and locations of contaminated soil are listed below with corresponding attached drawings:

- Exhibit B: Figures 2 and 3: Diesel range organics (DRO), gasoline range organics, (GRO), petroleum volatile organic compounds (PVOC) at the northeast corner of Plant 01 [formerly known as Plant #7] (BRRTS #03-36-001476), in the location of the soil excavation and water supply line.
- Exhibit C, Figure 4: DRO and polychlorinated byphenols (PCBs) on the north side of Plant 02 (BRRTS #02-36-220607), approximately 40 feet northeast of overhead door #23
- Exhibit D, Figure 5: DRO on the North side of Plant 50 [formerly known as plant #5](Commerce #54220-6717-15), on the north side of the plant at the wall, 15 feet south of the concrete access manhole.

NOW THEREFORE, the owner hereby declares that specific portions of the property described above as specifically described below, are held and shall be held, conveyed or encumbered, leased, rented, used, occupied and improved subject to the following limitation and restrictions:

1. Northeast corner of Plant 01 [formerly known as Plant #7] (BRRTS #03-36-001476), in the location of the soil excavation and water supply line [Exhibit B: Figures 2 and 3]

One or more petroleum discharges have occurred at this location on the property. Structural impediments existing at the time of clean-up made complete remediation of the soil contamination impracticable. Petroleum contaminated soil may remain on this property at the following locations: near the northeast corner of Plant 01 and in the location of the soil excavation and water supply line as specifically identified in Exhibit B (Figures 2 and 3). Pursuant to the requirements of s. 292.11, Stats, if the structural impediments that currently exist on this property are removed, the property owner shall conduct an investigation of the degree and extent of petroleum contamination. To the extent that contamination is found at that time, the Wisconsin Department of Natural Resources shall be immediately notified and the contamination shall be properly treated or disposed of in accordance with applicable laws.

2. North side of Plant 02 (BRRTS #02-36-220607) [Exhibit C, Figure 4]

The following activities are prohibited on that portion of the property shown in Exhibit C, Figure 4 where a soil cover has been placed (in the vicinity of soil sample S-2) unless prior written approval has been obtained from the Wisconsin Department of Natural Resources or its successor or assign: (1) Excavating or grading of the land surface; (2) Filling on the capped area; (3) Plowing for agricultural cultivation; and (4) Construction or installation of a building or other structure with a foundation that would sit on or be placed within the cap or cover. In addition, the soil cover shall be maintained in compliance with a Plan dated June 11, 2002, prepared and submitted to the Wisconsin Department of Natural Resources by Mirro Co, as required by section NR 724.13(2), Wis. Adm. Code (1999).

3. North side of Plant 50 [formerly known as plant #5](Commerce #54220-6717-15) [Exhibit D, Figure 5]

This affidavit is being recorded for the purpose of notifying prospective purchasers and other interested parties that soil contaminated with Diesel Range Organics from an underground storage tank remains on this property as shown on Exhibit D, Figure 5. If this contaminated soil is excavated in the future, it may be considered solid waste and will need to be disposed in accordance with applicable statutes and rules.

WHEREAS, it is the desire and intention of the property owner to impose on the property restrictions which will make it unnecessary to conduct further soil remediation activities on the property at the present time.

This restriction is hereby declared to be a covenant running with the land and shall be fully binding upon all persons acquiring the above-described property whether by descent, devise, purchase or otherwise. This restriction benefits and is enforceable by, the Wisconsin Department of Natural Resources, its successors and assigns. The Department, its successors or assigns, may initiate proceedings at law or in equity against any person or persons who violate or are proposing to violate this covenant, to prevent the proposed violation or to recover damages for such violation.

Any person who is or becomes owner of the property described above may request that the Wisconsin Department of Natural Resources or its successor issue a determination that the restrictions set forth in this covenant are no longer required. Upon receipt of such a request, the Wisconsin Department of Natural Resources shall determine whether or not the restrictions contained herein can be extinguished. If the Department determines that the restrictions can be extinguished, an affidavit, with a copy of the Department's written determination, may be recorded to give notice that this deed restriction, or portions of this deed restriction are no longer binding.

By signing this document, Douglas L. Martin acknowledges that he is duly authorized to sign this document on behalf of Newell Operating Company.

Re: Performance Standard Cap, Mirro Company Plant #02, 2401 Memorial Drive, Manitowoc,
Wisconsin; BRRTS #02-36-220607

Dear Ms. Weissbach:

On behalf of the Mirro Company, Northern Environmental Technologies, Incorporated (Northern Environmental) is providing information regarding the performance standard cap that was required as part of the conditional case closure letter for the Mirro Company Plant #02, 2401 Mirro Drive, Manitowoc, Wisconsin (the Site). As part of the conditional case closure of the Site, the WDNR is requiring that a surface barrier be maintained over the soil contamination near soil sample S2. Given the low permeability of the native soil at the Site, Northern Environmental is recommending that the top three feet of soil near soil sample S2 serve as a performance standard cap.

Maintenance Plan

The surface area near S1 will be inspected on a yearly basis by the Site owner to ensure that the cap is being maintained. The area will be examined for evidence of settling, potholes, erosion, and other damage. Damaged areas will be repaired within 30 days of discovery. A report describing the nature and extent of any damage to the barrier and subsequent repairs will be submitted to the Wisconsin Department of Natural Resources upon completion of these activities. Completed copies of written inspections will be maintained on-site. An example of the inspection form is enclosed.

We trust this information meets your needs. Please contact us at 920-592-8400 if you have any questions.

Sincerely,
**Northern Environmental
Technologies, Incorporated**

RE: Final Closure

Commerce # 54220-6744-01 WDNR BRRTS # 03-36-280532
Mirro Company Plant #2, 2401 Mirro Drive, Manitowoc

Two 20,000-gallon fuel oil USTs

Dear Mr. Deaton:

This letter acknowledges receipt of the information requested in the Wisconsin Department of Commerce's (Commerce) PECFA Site Review Section February 25, 2002 conditional closure letter. On April 23, 2002, Commerce received the monitoring well abandonment forms for the sump.

This site is now listed as "closed" on the Commerce database. It is in your best interest to keep all documentation related to the investigation and remediation of your site.

If future site conditions indicate that any remaining contamination poses a threat, and subsequent information indicates a need to reopen this case, any original claim under the PECFA fund would also reopen and you may apply for assistance to the extent of remaining eligibility. If contamination is encountered, appropriate measures must be implemented to assure any residual contamination is managed following all applicable State of Wisconsin regulations and standards.

Thank you for your efforts to protect Wisconsin's environment. If you have any questions, please contact me in writing at the letterhead address or by telephone at (920) 424-0046.

Sincerely,

RE: Final Closure

Commerce # 54220-6717-15 WDNR BRRTS # 03-36-170638
Mirro Corporation Plant 5, 2015 Mirro Drive, Manitowoc

Dear Mr. Reed:

The Wisconsin Department of Commerce (Commerce) has received all items required for closure of the site referenced above. This site is now listed as "closed" on the Commerce database and will be included on the Wisconsin Department of Natural Resources (WDNR) Geographic Information System (GIS) Registry of Closed Remediation Sites to address residual soil contamination.

It is in your best interest to keep all documentation related to the environmental activities at your site. If residual contamination is encountered in the future, appropriate measures must be implemented to assure that it is managed following all applicable regulations. If future site conditions indicate that any remaining contamination poses a threat, and subsequent information indicates a need to reopen this case, any original claim under the PECFA fund would also reopen and you may apply for assistance to the extent of remaining eligibility.

Thank you for your efforts to protect Wisconsin's environment. If you have any questions, please contact me in writing at the letterhead address or by telephone at (920) 424-0046.

Sincerely,

Parcel Identification Number (PIN)

WHEREAS, Newell Operating Company (formerly known as the Aluminum Goods Manufacturing Company, a New Jersey Corporation) is the owner of the above-described property.

WHEREAS, one or more discharges have occurred on this property. Contaminated soils exist on this property at or near the locations as shown in Exhibit A, Figure 1 Site Layout, Mirro Company

Specific types, concentrations, and locations of contaminated soil are listed below with corresponding attached drawings:

- Exhibit B: Figures 2 and 3: Diesel range organics (DRO), gasoline range organics, (GRO), petroleum volatile organic compounds (PVOC) at the northeast corner of Plant 01 [formerly known as Plant #7] (BRRTS #03-36-001476), in the location of the soil excavation and water supply line.
- Exhibit C, Figure 4: DRO and polychlorinated byphenols (PCBs) on the north side of Plant 02 (BRRTS #02-36-220607), approximately 40 feet northeast of overhead door #23
- Exhibit D, Figure 5: DRO on the North side of Plant 50 [formerly known as plant #5](Commerce #54220-6717-15), on the north side of the plant at the wall, 15 feet south of the concrete access manhole.

NOW THEREFORE, the owner hereby declares that specific portions of the property described above as specifically described below, are held and shall be held, conveyed or encumbered, leased, rented, used, occupied and improved subject to the following limitation and restrictions:

1. Northeast corner of Plant 01 [formerly known as Plant #7] (BRRTS #03-36-001476), in the location of the soil excavation and water supply line [Exhibit B: Figures 2 and 3]

One or more petroleum discharges have occurred at this location on the property. Structural impediments existing at the time of clean-up made complete remediation of the soil contamination impracticable. Petroleum contaminated soil may remain on this property at the following locations: near the northeast corner of Plant 01 and in the location of the soil excavation and water supply line as specifically identified in Exhibit B (Figures 2 and 3). Pursuant to the requirements of s. 292.11, Stats, if the structural impediments that currently exist on this property are removed, the property owner shall conduct an investigation of the degree and extent of petroleum contamination. To the extent that contamination is found at that time, the Wisconsin Department of Natural Resources shall be immediately notified and the contamination shall be properly treated or disposed of in accordance with applicable laws.

2. North side of Plant 02 (BRRTS #02-36-220607) [Exhibit C, Figure 4]

The following activities are prohibited on that portion of the property shown in Exhibit C, Figure 4 where a soil cover has been placed (in the vicinity of soil sample S-2) unless prior written approval has been obtained from the Wisconsin Department of Natural Resources or its successor or assign: (1) Excavating or grading of the land surface; (2) Filling on the capped area; (3) Plowing for agricultural cultivation; and (4) Construction or installation of a building or other structure with a foundation that would sit on or be placed within the cap or cover. In addition, the soil cover shall be maintained in compliance with a Plan dated June 11, 2002, prepared and submitted to the Wisconsin Department of Natural Resources by Mirro Co, as required by section NR 724.13(2), Wis. Adm. Code (1999).

3. North side of Plant 50 [formerly known as plant #5](Commerce #54220-6717-15) [Exhibit D, Figure 5]

This affidavit is being recorded for the purpose of notifying prospective purchasers and other interested parties that soil contaminated with Diesel Range Organics from an underground storage tank remains on this property as shown on Exhibit D, Figure 5. If this contaminated soil is excavated in the future, it may be considered solid waste and will need to be disposed in accordance with applicable statutes and rules.

WHEREAS, it is the desire and intention of the property owner to impose on the property restrictions which will make it unnecessary to conduct further soil remediation activities on the property at the present time.

This restriction is hereby declared to be a covenant running with the land and shall be fully binding upon all persons acquiring the above-described property whether by descent, devise, purchase or otherwise. This restriction benefits and is enforceable by, the Wisconsin Department of Natural Resources, its successors and assigns. The Department, its successors or assigns, may initiate proceedings at law or in equity against any person or persons who violate or are proposing to violate this covenant, to prevent the proposed violation or to recover damages for such violation.

Any person who is or becomes owner of the property described above may request that the Wisconsin Department of Natural Resources or its successor issue a determination that the restrictions set forth in this covenant are no longer required. Upon receipt of such a request, the Wisconsin Department of Natural Resources shall determine whether or not the restrictions contained herein can be extinguished. If the Department determines that the restrictions can be extinguished, an affidavit, with a copy of the Department's written determination, may be recorded to give notice that this deed restriction, or portions of this deed restriction are no longer binding.

By signing this document, Douglas L. Martin acknowledges that he is duly authorized to sign this document on behalf of Newell Operating Company.

Re: Performance Standard Cap, Mirro Company Plant #02, 2401 Memorial Drive, Manitowoc,
Wisconsin; BRRTS #02-36-220607

Dear Ms. Weissbach:

On behalf of the Mirro Company, Northern Environmental Technologies, Incorporated (Northern Environmental) is providing information regarding the performance standard cap that was required as part of the conditional case closure letter for the Mirro Company Plant #02, 2401 Mirro Drive, Manitowoc, Wisconsin (the Site). As part of the conditional case closure of the Site, the WDNR is requiring that a surface barrier be maintained over the soil contamination near soil sample S2. Given the low permeability of the native soil at the Site, Northern Environmental is recommending that the top three feet of soil near soil sample S2 serve as a performance standard cap.

Maintenance Plan

The surface area near S1 will be inspected on a yearly basis by the Site owner to ensure that the cap is being maintained. The area will be examined for evidence of settling, potholes, erosion, and other damage. Damaged areas will be repaired within 30 days of discovery. A report describing the nature and extent of any damage to the barrier and subsequent repairs will be submitted to the Wisconsin Department of Natural Resources upon completion of these activities. Completed copies of written inspections will be maintained on-site. An example of the inspection form is enclosed.

We trust this information meets your needs. Please contact us at 920-592-8400 if you have any questions.

Sincerely,
**Northern Environmental
Technologies, Incorporated**

SUBJECT: Close Out Request for Mirro Plant 2 - formerly Plant 6
2401 Mirro Dr., Manitowoc, WI
ERRP CASE #02-36-000497

Dear Mr. Deaton;

The Northeast Region Closeout Committee met January 4, 1999 to review case closure requests. The committee has determined that this case does meet the minimum closure requirements identified in Wisconsin Administrative Code Chapter NR 729. The site can be closed pending the filing of a groundwater use restriction and abandonment of the on site groundwater monitoring wells. The groundwater use restriction is required due to the persistence of ~~trichloroethylene~~ contamination at monitoring well MW6 in excess of the NR 140 groundwater enforcement standard.

MW16 deh 1-30-2012

tetrachloroethylene
deh
1-30-2012

Attached is an example of a model groundwater use restriction. Please complete and return a draft copy to this office. Upon Department approval, Mirro will file the restriction with the Manitowoc register of Deeds and send a recorded copy to this office. Pending the abandonment of the monitoring wells and recording the restriction the case will be closed.

If you have any questions regarding this determination, please contact me in Green Bay, at (414) 492-5864.

Sincerely,

James Reyburn
Project Manager
