Dear Mr. Delcore:

Soil and groundwater at the above-referenced site were not analyzed for polyfluoroalkyl substances (PFAS) because there is no indication that the site was used to produce materials containing PFAS compounds or that any materials containing PFAS were used on the site. The site has been a gasoline service station since the property was developed, circa 1912.

Please let me know if you have any questions. Thank you.

Sincerely,  
Midwest Environmental Consulting
