ENVIRONMENT

Subject:
Discharge Monitoring Report – In-Site Chemical Oxidation Groundwater Pilot Test,
Madison-Kipp Corporation (MKC) Site, 201 Waubesa Street, Madison, Wisconsin.

Dear Mr. Mosher:

On behalf of MKC, this letter summarizes the activities completed from November 27 through January 3, 2012 as part of the in-situ chemical oxidation (ISCO) Pilot Test at the MKC site located at 201 Waubesa Street in Madison, Wisconsin (site) under Wisconsin Pollution Discharge Elimination System (WPDES) Permit WI-0046566-6 and the Temporary Exemption for the Injection of a Remedial Material to Groundwater under Chapter NR 140, Wisconsin Administrative Code (Wis. Adm. Code), and Injection Approval under Chapter NR 812.05, Wis. Adm. Code. A discharge monitoring report form is attached, Attachment A, for the baseline sampling event, shallow injection interval (IW-1S), shallow bedrock injection interval (IW-2D), and the deep bedrock injection interval (IW-2D2). A summary of activities completed through January 3, 2013 is presented below.

Pilot Test Implementation and Monitoring

Baseline Monitoring

Baseline groundwater sampling was completed from November 27 through December 6, 2012, in compliance with the approved ISCO Work Plan, dated October 17, 2012. Analytical results are reported in the attached Table 1.

Pilot Test Injection Event

Injection activities began Monday, December 10, 2012, with baseline conductivity readings and injection setup. A total of 18,350 gallons of 5% sodium permanganate solution was injected during the pilot test from December 11 through December 17,

2012. The shallow bedrock injection interval (IW-2D) received approximately 7,000 gallons of a sodium permanganate solution with potassium bromide as tracer from December 11 through 12, 2012. The target potassium bromide concentration for the shallow bedrock interval tracer was 800 milligrams per liter (mg/L) of injection solution. The shallow injection interval, unconsolidated formation above bedrock, received approximately 2,350 gallons of sodium permanganate solution with deuterium as the tracer from December 15 through December 17, 2012. The target deuterium concentration was approximately 0.9 milliliters of deuterium per gallon of injection solution. The deep bedrock injection interval (IW-2D2) received approximately 9,000 gallons of a sodium permanganate solution with sodium chloride as the tracer from December 13 through 18, 2012. The target sodium chloride concentration for the deep bedrock interval tracer was 3 grams per liter of injection solution. No further injection activities are planned in conjunction with the ISCO Pilot Test.

Post-Injection Monitoring

Post injection monitoring was completed in accordance with the approved work plan the weeks of December 17, December 24, and December 31, 2012. The weekly sampling following the injection event included a vertical profile of the screen interval for conductivity and the monitoring of tracer concentrations only.

Post injection monitoring continues on a bi-weekly basis through February 28, 2013, with the first full round of groundwater sampling including: volatile organic compounds, total metals (arsenic, chromium, manganese, and iron), dissolved metals (Resource Conservation & Recovery Act metals, manganese, and iron), total organic carbon, total dissolved solids, chloride, bromide, and deuterated water scheduled for the week of January 14, 2013.

If you have any questions or require any additional information, please contact us at 414.276.7742.

Sincerely,

ARCADIS U.S., Inc.
