Subject:

Groundwater Extraction Pump Test and Full-Scale Extraction System Summary,
Madison-Kipp Corporation, Madison, Wisconsin.

ENVIRONMENT

Dear Mr. Erickson:

ARCADIS is pleased to submit the following summary to the Madison Metropolitan Sewerage District (MMSD) to outline the initial groundwater extraction activities related to a pump test at the facility located at 201 Waubesa Street in Madison, Wisconsin (site). As discussed during our meeting on November 13, 2013, the purpose of this letter is to provide a description of the initial groundwater extraction activities, present analytical data that is representative of the groundwater at the site, and request approval to temporarily discharge groundwater to the sanitary sewer during these activities.

Date:
December 2, 2013

A *Groundwater Remedial Strategy* letter was submitted to the Wisconsin Department of Natural Resources (WDNR) on October 16, 2013 and approved by WDNR in email correspondence on October 17, 2013. The letter to WDNR presented a groundwater remedial strategy for the site utilizing groundwater extraction and an in-situ chemical oxidation injection. The initial activities related to the groundwater extraction remedy include the completion of a step and a pump test. The step test provides information for efficient operation of the pump test, and the pump test provides critical information related to the volume of groundwater that can be recovered/pumped from a single well. This data will be used to develop a basis of design for the full-scale groundwater extraction system. This summary includes a description of the proposed testing and preliminary full-scale system design.

Step/Pump Test Description

The pump test has been developed based on the WDNR-approved *Groundwater Remedial Strategy* letter dated October 16, 2013. The following steps outline the pump test scope:

- Submit application to the MMSD and city of Madison for permits required to temporarily discharge extracted groundwater to the sanitary sewer during the

Page:
1/5

DRAFT

proposed step/pump test. A summary of representative groundwater analytical data is presented in Table 1.

- Per the request of MMSD, groundwater samples were collected for laboratory analysis of polychlorinated biphenyls (PCBs) at a lower detection limit using Northern Lakes Service. Total and dissolved PCB results were reported below the detection limit for all samples. Additionally, groundwater samples were collected for analysis of biochemical oxygen demand (BOD) and chemical oxygen demand (COD). Both BOD and COD were reported below the method detection limit. The samples were collected from the existing monitoring wells located nearest the proposed extraction well (Figure 1). Analytical reports for the PCB, BOD, and COD sampling are included as Attachment A.
- Install one groundwater extraction well in the northern parking lot to a depth up to 185 feet below land surface (Figure 1).
- Set up equipment, temporary hose, and traffic controls for the step/pump test. A traffic control plan will be submitted to the city of Madison and the MMSD before the initiation of any testing to document the proposed safety precautions for the placement of the hose at the sanitary sewer (MSD-MH06-110). The groundwater extracted during the testing will be screened through a 100 micron bag filter prior to discharge to the sanitary sewer. All major equipment will be kept on Madison-Kipp property. Temporary discharge hose will be placed along the easement between the bike path/rain garden and the residential properties of South Marquette Street, and routed into the sanitary sewer manhole. The temporary hose is proposed for the duration of the step and pump tests. ARCADIS and/or Madison-Kipp personnel will inspect the hose during the testing to ensure the integrity of the connections and confirm there are no leaks. The routing of the hose will be identified using a-frame barricades. Traffic controls will be placed on the northern end of South Marquette Street to protect the temporary discharge hose and proposed discharge manhole from any vehicle or foot traffic. The temporary hose and traffic controls will be stored at the Madison-Kipp facility during off-test hours.
- Completion of three 4-hour step tests (one each at 40, 60, and 80 gallons per minute [gpm]) to determine the appropriate pumping rate for the pump test. Total discharge volume from the step test is approximately 43,200 gallons. The step test is proposed to be completed in one day.

DRAFT

- Routine groundwater elevation monitoring will be completed at site-wide monitoring wells to monitor influence from this test. Data will be analyzed and used to confirm the proposed pumping rate for the 24-hour test.
- One grab effluent sample will be collected and analyzed during each of the three step tests. The samples will be analyzed for volatile organic compounds (VOCs), total dissolved solids (TDS), dissolved and total iron, and dissolved and total manganese.
- Completion of a 24-hour pump test to determine the necessary operational requirements of the extraction well and to guide final design specifications for the groundwater extraction and treatment system. The pump test will be initiated approximately 48 hours after the initiation of the step test. The maximum groundwater discharge (pump test rate of 80 gallons per minute [gpm]) to the sanitary sewer from the pump test is approximately 115,200 gallons.
- Routine groundwater elevation monitoring will be completed at site-wide monitoring wells to monitor influence from this test.
- One grab sample will be collected from the influent before the bag filter assembly to monitor total suspended solids before the proposed bag filter assembly.
- One grab effluent sample will be collected every six hours during the pump test. Effluent samples will be analyzed for VOCs, TDS, dissolved and total iron, and dissolved and total manganese.

Full-Scale System Design Considerations

Following completion of the pump test the full-scale system basis of design will be completed. Based on the site information collected during the investigation activities, the preliminary basis of design for the full-scale system includes solids filtration, air stripping, and vapor-phase carbon treatment. The estimated groundwater extraction rate for the full-scale system is 60 gpm. Preliminary evaluation of the potential stripping efficiency indicates greater than 99% removal of VOCs present at the site can be removed from the extracted groundwater prior to discharge. An evaluation of the options for disposal of the extracted groundwater, including discharge to the sanitary sewer or storm sewer and/or potential reuse at Madison-Kipp, will be completed as part of the final design.

DRAFT**Project Schedule**

Following receipt of approval from MMSD to discharge extracted groundwater during the step/pump test to the sanitary sewer and issuance of the respective permits, a schedule for the commencement of the step/pump test activities will be confirmed with the MMSD. It is understood that no discharge events will be approved in December 2013; therefore, ARCADIS would like to request approval to complete the step/pump test in January 2014 pending coordination with respective drilling and equipment contractors. It is anticipated that the drilling of the extraction well will be initiated on December 6, 2013; however, no testing will be scheduled until the approval from MMSD is confirmed.

Closing

ARCADIS appreciates the opportunity to submit this summary and looks forward to working with you on this project. Should you have any questions relating to the information presented herein, please call any of the undersigned.

Sincerely,
ARCADIS U.S., Inc.

Only VOCs detected in one or more water samples are listed on the table. Refer to laboratory analytical reports for a complete list of constituents analyzed.

Two sample dates are presented for the monitoring wells closest to the proposed extraction well. Samples collected in November and December 2012 represent aquifer conditions before the In-Situ Chemical Oxidation Pilot Test completed in December 2012. The most recent sampling event, October 2013 is also included to document current conditions.

100 Concentration exceeds the NR 140 Wis. adm. code Preventive Action Limit.

100 Concentration exceeds the NR 140 Wis. adm. code Enforcement Standard.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

No additional comments.

Receipt

The samples were received on 11/19/2013 10:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.3° C.

General Chemistry

No analytical or quality issues were noted.

Detection Summary

Client: ARCADIS U.S., Inc.
Project/Site: MadisonKipp

TestAmerica Job ID: 500-67091-1

Client Sample ID: MW-3D

Lab Sample ID: 500-67091-1

No Detections.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.	1
□	Listed under the "D" column to designate that the result is reported on a dry weight basis	2
%R	Percent Recovery	3
CNF	Contains no Free Liquid	4
DER	Duplicate error ratio (normalized absolute difference)	5
Dil Fac	Dilution Factor	6
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample	7
DLC	Decision level concentration	8
MDA	Minimum detectable activity	9
EDL	Estimated Detection Limit	10
MDC	Minimum detectable concentration	11
MDL	Method Detection Limit	12
ML	Minimum Level (Dioxin)	13
NC	Not Calculated	14
ND	Not detected at the reporting limit (or MDL or EDL if shown)	
PQL	Practical Quantitation Limit	
QC	Quality Control	
RER	Relative error ratio	
RL	Reporting Limit or Requested Limit (Radiochemistry)	
RPD	Relative Percent Difference, a measure of the relative difference between two points	
TEF	Toxicity Equivalent Factor (Dioxin)	
TEQ	Toxicity Equivalent Quotient (Dioxin)

Creator: Scott, Sherri L

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	5.3
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Values in brackets represent results greater than or equal to the LOD but less than the LOQ and are within a region of "Less-Certain Quantitation". Results greater than or equal to the LOQ are considered to be in the region of "Certain Quantitation". LOD and/or LOQ tagged with an asterisk(*) are considered Reporting Limits. All LOD/LOQs adjusted to reflect dilution.

LOD = Limit of Detection

LOQ = Limit of Quantitation

ND = Not Detected (< LOD)

1000 ug/L = 1 mg/L

DWB = Dry Weight Basis

NA = Not Applicable

%DWB = (mg/kg DWB) / 10000

MCL = Maximum Contaminant Levels for Drinking Water Samples. Shaded results indicate >MCL.
