Notes

1 - Screening Levels were calculated in accordance with Section VI A 1 of *Addressing Vapor Intrusion at Remediation and Redevelopment Sites in Wisconsin* (WDNR, 2010), accessed at: <http://dnr.wi.gov/files/PDF/pubs/rr/RR800.pdf>

2 - For non-residential, the following attenuation factor was used: 0.001 for deep soil gas to indoor air [Section VI A 3 of WDNR (2010)].
 For residential, the following attenuation factor was used: 0.01 for deep soil gas to indoor air [Section VI A 2 of WDNR (2010)].

**The compound 1,2-Dichloroethene was reported in 2009. The compounds cis- and trans-1,2-Dichloroethene were reported in 2011 and 2012 and have been manually combined for comparison purposes.

Residential and non-residential criteria are provided for comparison purposes. Soil vapor probes VP-3 through VP-6 are compared only to deep soil gas non-residential criteria due to the location of the probes (large commercial/industrial building, greater than 5 feet below the nearest building foundation).

100	Result exceeds the Wisconsin Residential Deep Soil Gas Calculated Screening Level with a 0.01 attenuation factor
100	Result exceeds the Wisconsin Non-Residential Deep Soil Gas Calculated Screening Level with a 0.001 attenuation factor

*D Limit of detection not achievable due to dilution.

*IS The internal standard QC limit is exceeded.

All units are presented in micrograms per liter ($\mu\text{g/L}$).

Only analytes detected in groundwater samples are presented.

100 Exceeds the Wisconsin Department of Natural Resources Preventive Action Limit (PAL).

100 Exceeds the Wisconsin Department of Natural Resources Enforcement Standard (ES).

< Not detected.

-- Standard not established

J Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
