Re: Facility-Wide Groundwater Monitoring Report for 2023
Superior Refining Company LLC, Superior, WI
WDNR BRRTS# 16-16-559511
Facility ID 816009590

Dear John:

On behalf of Superior Refining Company LLC (SRC), Barr Engineering Co. (Barr) is submitting this facility-wide Environmental Response Program (ERP) remediation progress report for the SRC refinery in Superior, Wisconsin. Periodic site progress reporting to the Wisconsin Department of Natural Resources (WDNR) is required pursuant to ss. NR 700.11(1) and 724.13(3), Wisconsin Administrative Code. This report summarizes monitoring activities conducted at the site in 2023.

1 Facility and Site Background Information

Figure 1 shows the location and approximate boundary of the facility-wide ERP site and the area surrounding the refinery. Figure 2 presents the site layout of the refinery which occupies portions of Sections 25, 26, 30, and 36; Township 49 North; Range 14 West; in Superior Township of Douglas County, Wisconsin. Figure 2 also shows the locations of the 22 monitoring wells and eight piezometers that are currently part of the semiannual monitoring network. Table 1 provides additional information regarding monitoring well and piezometer locations, designations, and monitoring parameters.

Topography at the refinery slopes gently to the east. Surface elevations range from approximately 650 to 660 feet above mean sea level (MSL). The closest natural surface water body is Newton Creek, located approximately 850 feet east of the refinery's closest aboveground storage tank (AST) (Figure 1). The creek flows for approximately 1.5 miles to Hog Island Inlet, which connects to Lake Superior Bay. Storm water retention and fire water ponds, along with two artificial wetlands formerly used for wastewater treatment plant discharge polishing are located just northwest of the Newton Creek headwaters, near the intersection of Stinson/24th Avenue and Bardon Avenue.

Other than the process areas, which are generally paved, most of the refinery property is unpaved. The depth to groundwater in the network monitoring wells ranges from less than 1 foot to greater than 6 feet below ground surface (bgs) depending on time of year and topography. The regional groundwater flow direction is to the east (Figure 2).

As presented in the April 2014 Gannett Fleming, Inc. (GF) *Final Memorandum of Agreement, Site Investigation and Remedial Action Plan* (SI/RAP) (GF, 2014), red-brown native lean clay till is present beneath the site, is relatively homogenous, and extends to approximately 100 feet bgs. The hydraulic conductivity of the native clay underlying the refinery is on the order of 1×10^{-7} centimeters per second (cm/sec) (GF, 2014). Assuming a horizontal hydraulic gradient of 0.003 feet per foot (ft/ft) eastward and an effective porosity of 0.06, the estimated horizontal groundwater flow velocity at the refinery is approximately 0.01 foot per year (ft/yr) (GF, 2014).

In October 2011, Calumet Superior LLC (Calumet) acquired the refinery from Murphy Oil. In May 2014, the WDNR approved Calumet's April 2014 SI/RAP for the refinery (GF, 2014). In November 2017, Husky Superior Refining Holding Corp. (Husky Superior) purchased Calumet and changed its legal name to Superior Refining Company LLC (SRC). On April 4, 2018, the April 2014 SI/RAP became a component of the March 2018 Negotiated Agreement between SRC and the WDNR (WDNR/SRC, 2018). In January 2021, Husky and Cenovus Energy Inc. (Cenovus) merged to become Cenovus; however, the refinery is still referred to as SRC, and the Negotiated Agreement remains in effect.

In conjunction with the SI/RAP, an original network of 23 wells and eight piezometers was established for monitoring overall groundwater quality. Starting in 2015, all wells and piezometers in the network were gauged twice per year (to check for free product, track seasonal changes in water levels, and prepare groundwater contour map); 18 of the monitoring wells and the eight piezometers are purged and sampled; and the remaining five wells are gauged only. In 2022 the network of 23 wells was reduced to 22 wells as the PVC on monitoring well MW-3/T50, which was used for gauging purposes only, was damaged and needed to be sealed; well sealing details are discussed in the 2022 Barr *Facility-Wide Groundwater Monitoring Report for 2022* (Barr, 2023). As summarized in Table 1, the sampled wells (18) and piezometers (8) are referred to as "perimeter" wells and the 4 monitoring wells that are gauged but not sampled are referred to as "other" wells. Also listed on Table 1 is a separate subset of 5 perimeter wells that are sampled once per year as part of the WDNR Groundwater and Environmental Monitoring System (GEMS) program, also referred to as "pond" wells.

Currently, long-term groundwater monitoring of the facility-wide monitoring network is being conducted twice a year in accordance with the Negotiated Agreement. This report presents monitoring data for 2023.

2 Monitoring Activities in 2023

Year-round access to the network of monitoring wells and piezometers at the refinery is not practical because of relatively shallow groundwater, cold weather, and snow. When conditions allow access, the monitoring wells and piezometers are gauged and the perimeter wells/piezometers are purged and sampled in the spring and fall (typically April/May and September/October). Since gauging began in 2015 no measurable free product has been observed in the wells and piezometers in the network. Monitoring and gauging activities conducted in 2023 are summarized in Table 2.

2.1 Groundwater Levels

Groundwater samples were collected by Barr and Insight Environmental (Insight) field staff at the site during May and October 2023. Insight purged the perimeter wells/piezometers twice and allowed them to recover for at least 14 days between purge events and prior to sample collection by Barr which was conducted on May 30-31 and October 16-17, 2023. Table 2 includes fluid level monitoring data for May through October 2023. No measurable free product was observed in the monitoring wells or piezometers.

The depth to groundwater in the monitoring wells ranged from 2.50 to 14.76 feet bgs and the depth to groundwater in the piezometers ranged from 9.21 to 21.27 feet bgs.

Eight monitoring wells in the network have a co-located piezometer (Table 1). Monitoring wells within these pairs are up to 20 feet deep and have a 15-foot screen (except for MW-8R which has a 10-foot screen). The piezometers pairs are 40 feet deep with 5-foot screens set between 35 feet and 40 feet bgs. Since there is a 15-foot separation between the top of the piezometer and bottom of the monitoring well screens, we are able to calculate a vertical gradient at each paired location (Table 2). The calculated vertical gradient at monitoring well MW-13/PZ-13 was positive/upward (0.11). While the remaining vertical gradients were negative/downward and ranged from 0.07 to 0.59. Measured water level elevations and calculated vertical gradients are presented in Table 2; negative vertical gradients are shown in parenthesis in red.

The groundwater elevation data indicates the direction of shallow groundwater flow is to the east (Figure 2), which is consistent with historical groundwater flow directions. Likewise, the average calculated horizontal hydraulic gradient of 0.006 ft/ft is consistent with those calculated in previous years: 0.004 ft/ft in 2022 and 0.005 ft/ft in 2021.

2.2 Groundwater Sampling and Results

Groundwater samples were collected by Barr and Insight field staff at the site during May and October 2023. The perimeter wells/piezometers were purged using the modified purge method approved by the WDNR in 2015. Perimeter wells/piezometers are purged twice and allowed to recover for at least 14 days between purge events and prior to the collection of the samples. Field staff used a new one-time-use polyethylene disposable bailer with new nylon rope to collect each groundwater sample. The May 2023 and Fall 2023 groundwater samples were sent to Pace Analytical (Pace) in Minneapolis, Minnesota (Wisconsin laboratory certification #999407970); samples were analyzed for petroleum volatile organic compounds (PVOCS) and naphthalene using EPA Method 8260B. In addition, groundwater samples collected in October 2023 from the five GEMS (pond) wells (MW-1, MW-2, MW-3D, MW-8R, and MW-9B) were analyzed for VOCs (and select inorganics for the GEMS program, as described above).

Table 3 presents analytical results of the groundwater samples compared to the NR 140 Preventative Action Limits (PALs) and Enforcement Standards (ESs). Included in Table 3 are the results for PVOCS and naphthalene only; complete VOC and inorganic compound results for the five GEMS (pond) wells are submitted to the WDNR GEMS program staff in a separate report and included here in the attached

laboratory report. As shown in Table 3, PVOC and naphthalene concentrations were all below their respective PALs in the groundwater samples collected in May and October 2023. In October 2023, the ethylbenzene concentration in monitoring well PZ-13 (0.12 ug/l J) was flagged as an estimated detected value as the concentration is between the laboratory's detection and quantitation limits. The detection was below the NR 140 PAL of 140 ug/l).

Attachment A provides copies of the laboratory reports and chain of custody records for the groundwater samples collected in 2023.

2.3 Monitoring Well Maintenance Activities

As previously reported (Barr, 2023), monitoring wells MW-7 and MW-19 were replaced with MW-7R and MW-19R, respectively, in fall 2022. These wells were targeted to be developed prior to gauging in the spring of 2023. However, due to the slow recharge and record snowfall in the spring of 2023, the wells were not readily accessible prior to the scheduled gauging event and were not developed as planned. Because the gauging event is completed as two separate events 14 days apart, the gauging event on these slow recovery wells largely serves as a well development activity. The depth to bottom measurements recorded during each event did not identify a significant amount of sediment in the bottom of the wells and the water was only slightly turbid during both sampling events. An attempt will be made to completed formal well development on both wells in 2024.

3 Future Work

SRC's work plan for 2024 is as follows:

- Attempt to formally develop monitoring well MW-7R and MW-19R prior to gauging and sampling in Spring 2024. Development forms will be completed submitted with the 2024 annual report.
- Continue to gauge fluid levels in the network monitoring wells and piezometers, and purge and sample all the perimeter wells/piezometers twice per year (April/May and September/October).
- Continue to submit groundwater samples for the following laboratory analysis:
 - PVOCs/naphthalene using EPA Method 8260 on a routine basis.
 - VOCs using EPA Method 8260B and select inorganics using EPA Method 6010 and Standard Method 2320B when monitoring the five GEMS (pond) wells once per year.
- Report the results of the groundwater gauging and sample analyses in a groundwater monitoring report to the WDNR by the end of the first quarter of 2025.

If you have any questions or need additional information, please reach out to Joseph Pearson at SRC (joseph.pearson@cenovus.com) or me (lcarney@barr.com).

Sincerely,

Lynette M Carney
Project Manager

NOTES:

ERP = WDNR Environmental Repair Program

GEMS = WDNR Groundwater and Environmental Monitoring System

Other = wells that are routinely gauged but are not routinely purged and sampled.

WDNR = Wisconsin Department of Natural Resources

¹ Of this well/piezometer pair, only the piezometer, PZ-2/T66, is a perimeter well that is routinely purged and sampled

² Of this well/piezometer pair, only the well, MW-2/T66, is an "other" well and is not routinely purged or sampled

³ On September 1, 2022 monitoring well MW-3/T50 was sealed after it was damaged.

NOTES:

Site datum = NAVD 88 feet above mean sea level (ft MSL). No measurable thickness of free product observed in any of the monitoring wells.

Negative/downward calculated vertical gradients are enclosed in parenthesis and (red).

NC - not calculated due to anomalous depth to water reading.

Free product has not been observed in the monitoring wells or piezometers since gauging began in 2016

-- = Not applicable.

FOOTNOTES:

* - anomalous data point; possible data recording error.

(1) = Well was frozen.

NOTES:

Concentrations are in micrograms per liter ($\mu\text{g}/\ell$). No results are at or above an NR 140 ES or PAL.

NR 140 ES = Wisconsin Administrative Code NR 140 Enforcement Standard; 7/1/2015.

NR 140 PAL = Wisconsin Administrative Code NR 140 Preventative Action Limit; 7/1/2015.

TMBs = Sum of 1,2,4-Trimethylbenzene and 1,3,5-Trimethylbenzene.

MTBE = Methyl tert butyl ether.

PVOC = Petroleum Volatile Organic Compound

(1) MW-3D is a replacement for MW-3B.

(2) MW-9B is a replacement for MW-9.

a = Estimated value, calculated using some or all values that are estimates.

J = Estimated detected value. Either certain QC criteria were not met or the concentration is between the laboratory's detection and quantitation limits.

Pace Analytical Laboratory Reports

Spring and Fall Reports

June 08, 2023

Jim Taraldsen
Barr Engineering Company
325 S Lake Ave
Duluth, MN 55802

RE: Project: 49161494.03 100 102 SRC GW ERP
Pace Project No.: 10655692

Dear Jim Taraldsen:

Enclosed are the analytical results for sample(s) received by the laboratory on June 01, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Martha Hansen
martha.hansen@pacelabs.com

QUALIFIERS

Project: 49161494.03 100 102 SRC GW ERP

Pace Project No.: 10655692

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 885710

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

RE: Project: 49161494.02 100 102 SRC GW ERP
Pace Project No.: 10673041

Dear Jim Taraldsen:

Enclosed are the analytical results for sample(s) received by the laboratory on October 18, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Martha Hansen

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: 49161494.02 100 102 SRC GW ERP

Pace Project No.: 10673041

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

DL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 913838

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

D4 Sample was diluted due to the presence of high levels of target analytes.

P6 Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

REPORT OF LABORATORY ANALYSIS

RE: Project: 49161494.02 100 102 SRC GW GEM
Pace Project No.: 10672716

Dear Jim Taraldsen:

Enclosed are the analytical results for sample(s) received by the laboratory on October 17, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Martha Hansen

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: 49161494.02 100 102 SRC GW GEM

Pace Project No.: 10672716

Date: October 30, 2023

Case Narrative

Volatile Organics Analysis

8260D VOA

Batch 912960

Recovery for dichlorodifluoromethane in the secondary source was outside of laboratory control limits at 136% recovery (limits 70-130%). Reported values may be biased high.

Recovery for dichlorodifluoromethane in the continuing calibration verification was outside of laboratory control limits at 123% recovery (limits 80-120%). Reported values may be biased high.

Case Narrative

Volatile Organics Analysis

8260D VOA

Batch 912960

Recovery for dichlorodifluoromethane in the secondary source was outside of laboratory control limits at 136% recovery (limits 70-130%). Reported values may be biased high.

Recovery for dichlorodifluoromethane in the continuing calibration verification was outside of laboratory control limits at 123% recovery (limits 80-120%). Reported values may be biased high.

Recovery for chloromethane in the continuing calibration verification was outside of laboratory control limits at 121% recovery (limits 80-120%). Reported values may be biased high.

QUALIFIERS

Project: 49161494.02 100 102 SRC GW GEM

Pace Project No.: 10672716

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

DL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 912960

- [1] Dichlorodifluoromethane did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.
- [2] The continuing calibration verification was above the method acceptance limit for dichlorodifluoromethane and chloromethane. Any detection for the analyte in the associated samples may have a high bias.
