I spoke on the phone w/ Tom St. Peter from Precision Ice Blast at 11:30 on 3/4/13. He was the foreman that responded to the engine oil spill on 2/11/13. He said the spill occurred on land but the oil drained into a storm sewer which discharges to the Menominee River. The spill occurred because there was a buildup of oil and water in a trough below the air compressor. Then the plug that held the oil and water in place failed.

They borrowed oil socks, mats, and oil dry from Marinette Marine and placed them at the location where the storm drain discharges to the Menominee River. He said that the absorbent material was given back to Marinette Marine, who put it in a 55-gallon drum and disposed of it.

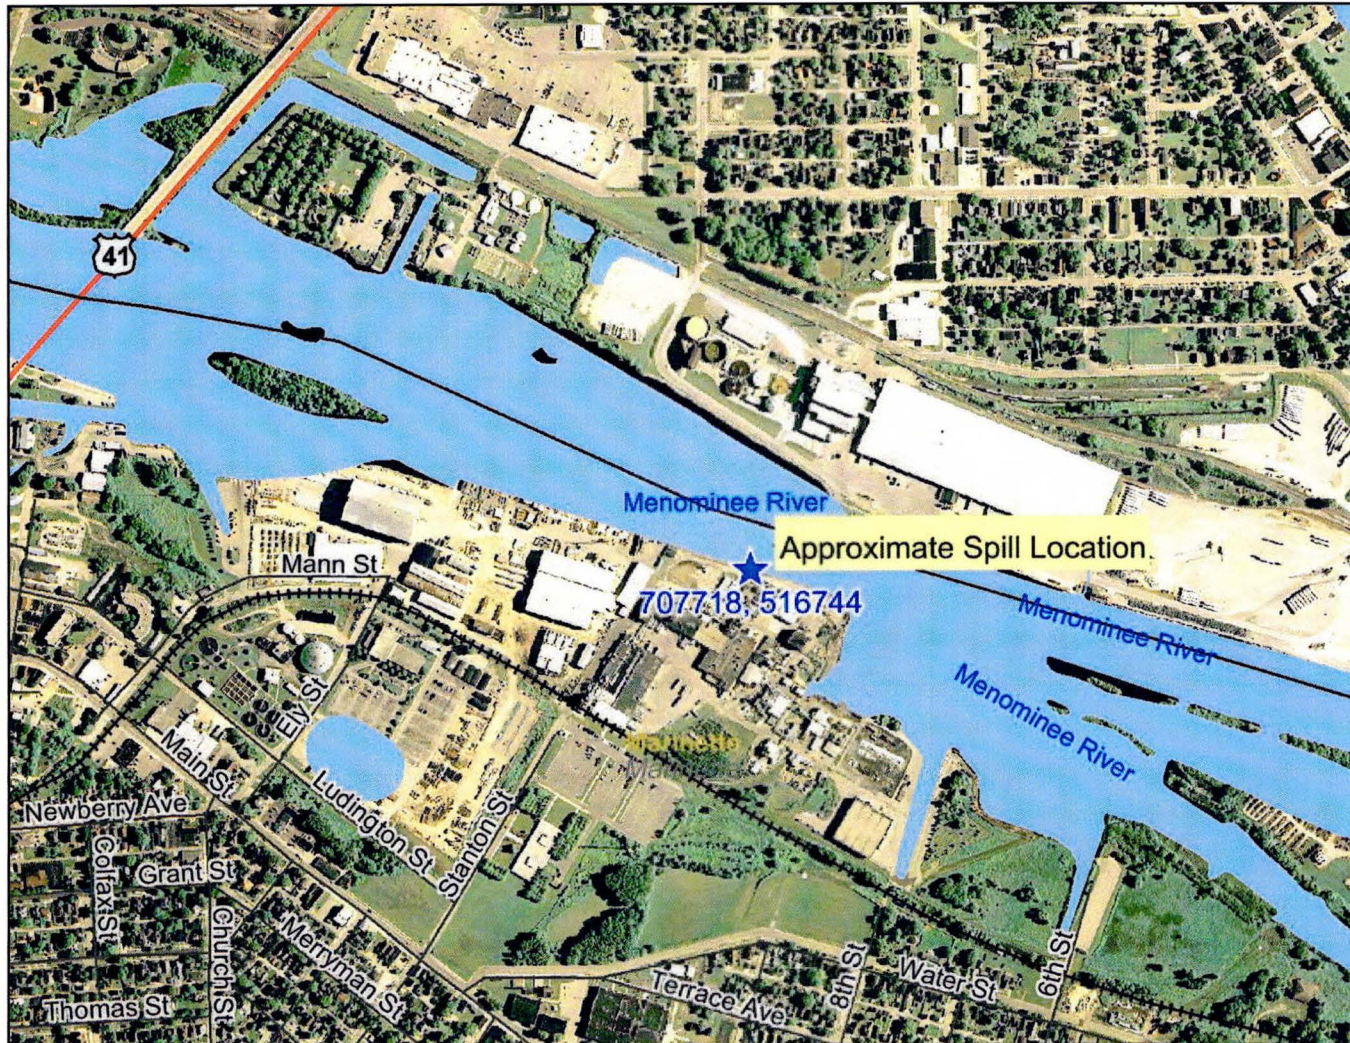

Since then they've built a secondary containment for the generator, replaced the drain plug, and moved the generator at least 10' away from the storm drain. They open the plug approximately 4x/day to make sure that oil/water doesn't build up.

I then called Scott Okhuysen from Marinette Marine. He said that there were 9 drums of absorbent material that were disposed of. He sent me the manifest.
