Hi Chris. My boss Michele Norman and I had a meeting with our vapor intrusion expert regarding the situation at Quality Cleaners in Grafton. We thought the best approach, given the limited funds available would be a bare minimum investigation at this point with one or two new monitoring wells, and sub-slab vapor sampling in two to three occupied buildings downgradient of the site that our VI expert identified (see attached figure). Please have the consultant submit a new, very brief proposal to me for that work. Please note that more investigation work may be required in the future, after this work is done.

We are committed to service excellence.

Visit our survey at <http://dnr.wi.gov/customersurvey> to evaluate how I did.
