

March 10, 2022

Mr. Kevin McKnight
Wisconsin Department of Natural Resources
625 E County Road Y, Suite 700
Oshkosh, Wisconsin 54901

Dear Mr. McKnight,

**Reference: Documentation of Completed Demolition Activities
Former Tecumseh Products Company Building
1604 Michigan Avenue, New Holstein, Wisconsin
BRRTS: 02-08-363333; Stantec Project: 193705416**

Dear Mr. McKnight,

On behalf of the City of New Holstein (City), Stantec Consulting Services Inc. (Stantec) prepared this letter to document demolition activities associated with the former Tecumseh Products Company (Tecumseh) manufacturing facility located at 1604 Michigan Avenue in New Holstein, Wisconsin (the Site or the Property). The City contracted with Veit & Company, Inc. (Veit) to demolish the approximately 410,000 square foot former manufacturing building. Demolition activities were substantially complete in November 2021. The location of the former Tecumseh building is shown on **Figure 1**. A detailed map of the former building is included as **Figure 2**.

Pre-Demolition Activities

Prior to active building demolition, the following actions were completed:

Monitoring Well Identification

Monitoring wells within the footprint of the former Tecumseh building including those utilized for ongoing groundwater quality investigation, were located and protected for future sample collection. Each well was identified with marking paint and cone; and in some cases, covered with a steel plate by Veit personnel ahead of demolition.

Abatement/Disposal of Asbestos, Lead-based Paint, and Restricted Waste

Abatement of asbestos containing materials (ACMs) and disposal of restricted wastes including fluorescent lighting, mercury thermostats/switches, electrical transformers, etc. was initiated prior to demolition. Visible Category I and II asbestos was removed by Veit's abatement subcontractor, Balistrieri Environmental and Development (Balistrieri), and disposed offsite at the GFL Hickory Meadows Landfill LLC facility. Due to the age and size of the former Tecumseh building, structural materials such as concrete coated with LBP was not abated prior to demolition. All structural materials containing LBP were segregated from recyclable materials and landfilled offsite at the GFL Hickory Meadows Landfill LLC facility.

Demolition Activities

On August 16, 2021, Veit, began mechanically razing the former Tecumseh building. Demolition began on the northern portion of the building nearest Taft Avenue and progressed south towards Michigan Avenue. Per the March 2021 "*City of New Holstein Demolition Plan*" submitted to the Wisconsin Department of Natural Resources (WDNR), only the above ground portions of the former

Reference: City of New Holstein - Documentation of Completed Demolition Activities

Tecumseh building were removed from the site. The building foundation and floor slab were left in place and intact to continue serving as a cap over contaminated soil and groundwater containing chlorinated solvents, petroleum compounds, chromium, and per- and polyfluoroalkyl substances. Demolition debris generated during the project was segregated and transported off-site as structural steel, non-structural metals, or general demolition debris. Based on a report provided by GFL Hickory Meadows Landfill LLC, a total of 8,554.67 tons of demolition debris was transported to their facility in Hilbert Wisconsin for disposal. A summary of disposal records is provided in Attachment A. All scrap metals were transported off-site for recycling. Photographs of demolition activities are included on the photolog in **Attachment B**.

Unabated ACMs primarily in the form of utility pipe wraps were encountered during active demolition in multiple portions of the building. When encountered, work in these locations was paused until the ACMs could be properly abated. A section of roofing containing Category II ACM in the form of transite could not be abated prior to the start of demolition due to the poor condition of the building roof. Instead, the transite was abated during demolition once safety precautions were in-place to allow a wheeled lift to access the area.

Concrete containing polychlorinated biphenyls (PCBs)

Demolition of the building exposed two former electrical transformer foundations containing residual PCB concentrations. The former transformer locations (TR-18 and TR-19) are illustrated on Figure 2. To address the risk of human exposure to these surfaces following building demolition, the foundations were covered with plastic followed by sheets of pressure treated plywood bolted to the concrete slab as a protective measure to avoid direct contact. The plywood at each location covers an approximate eight foot by sixteen-foot area. The barrier will remain in-place until future slab removal activities occur. The barrier will be inspected during the annual cap maintenance inspections conducted for the Property and repaired or replaced as required.

Former Building Pits/Trenches

To retain the current site cover per the WDNR's March 2017 closure letter, only above ground portions of the building were removed. Demolition did not disturb existing concrete foundations and flooring to the extent practicable.

Concrete lined pits and shallow trenches which supported past industrial operations were present within the footprint of the former building. As a part of demolition, all pits/trenches were initially filled with clean imported gravel to within approximately 6-inches of the adjacent concrete slab elevation to eliminate fall hazards and prepare the pits for placement of impermeable covers. Multiple pits were temporarily left unfilled during the demolition process to allow for the prior property owner to complete remedial action activities associated with a hexavalent chromium release at the southwest portion of the building. Following the removal of the structure in these areas, remedial actions which included subsurface injections and in-situ soil mixing were conducted by TRC Companies, Inc personnel in November 2021. After completion of these remedial actions, the pits used for remedial purposes and the exposed soil mixing area were filled as described above.

Flowable fill consisting of a mix of cement and gravel were installed over each gravel filled pit/trench and in locations where the concrete slab was damaged during the demolition in November 2021. Photographs showing the cap including flowable fill locations are included on the photolog in **Attachment B**. Annual inspections will continue to be conducted to ensure the cap remains intact and protective of public health, welfare, and the environment.

Reference: City of New Holstein - Documentation of Completed Demolition Activities

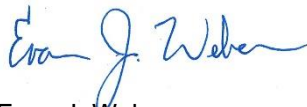

Site Access Restrictions

As of November 24, 2021 all demolition and cap restoration activities have been completed at the Site. To prevent public access to the Property, the existing chain link fence which surrounds the Property was repaired and will remain intact. The City will maintain the fence until further remedial action or redevelopment occurs.

We trust this information meets your needs. Please do not hesitate to contact us with any questions or comments.

LIMITATIONS

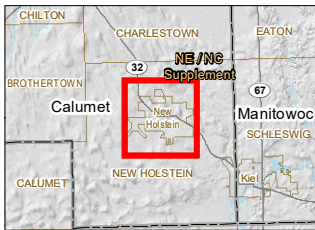

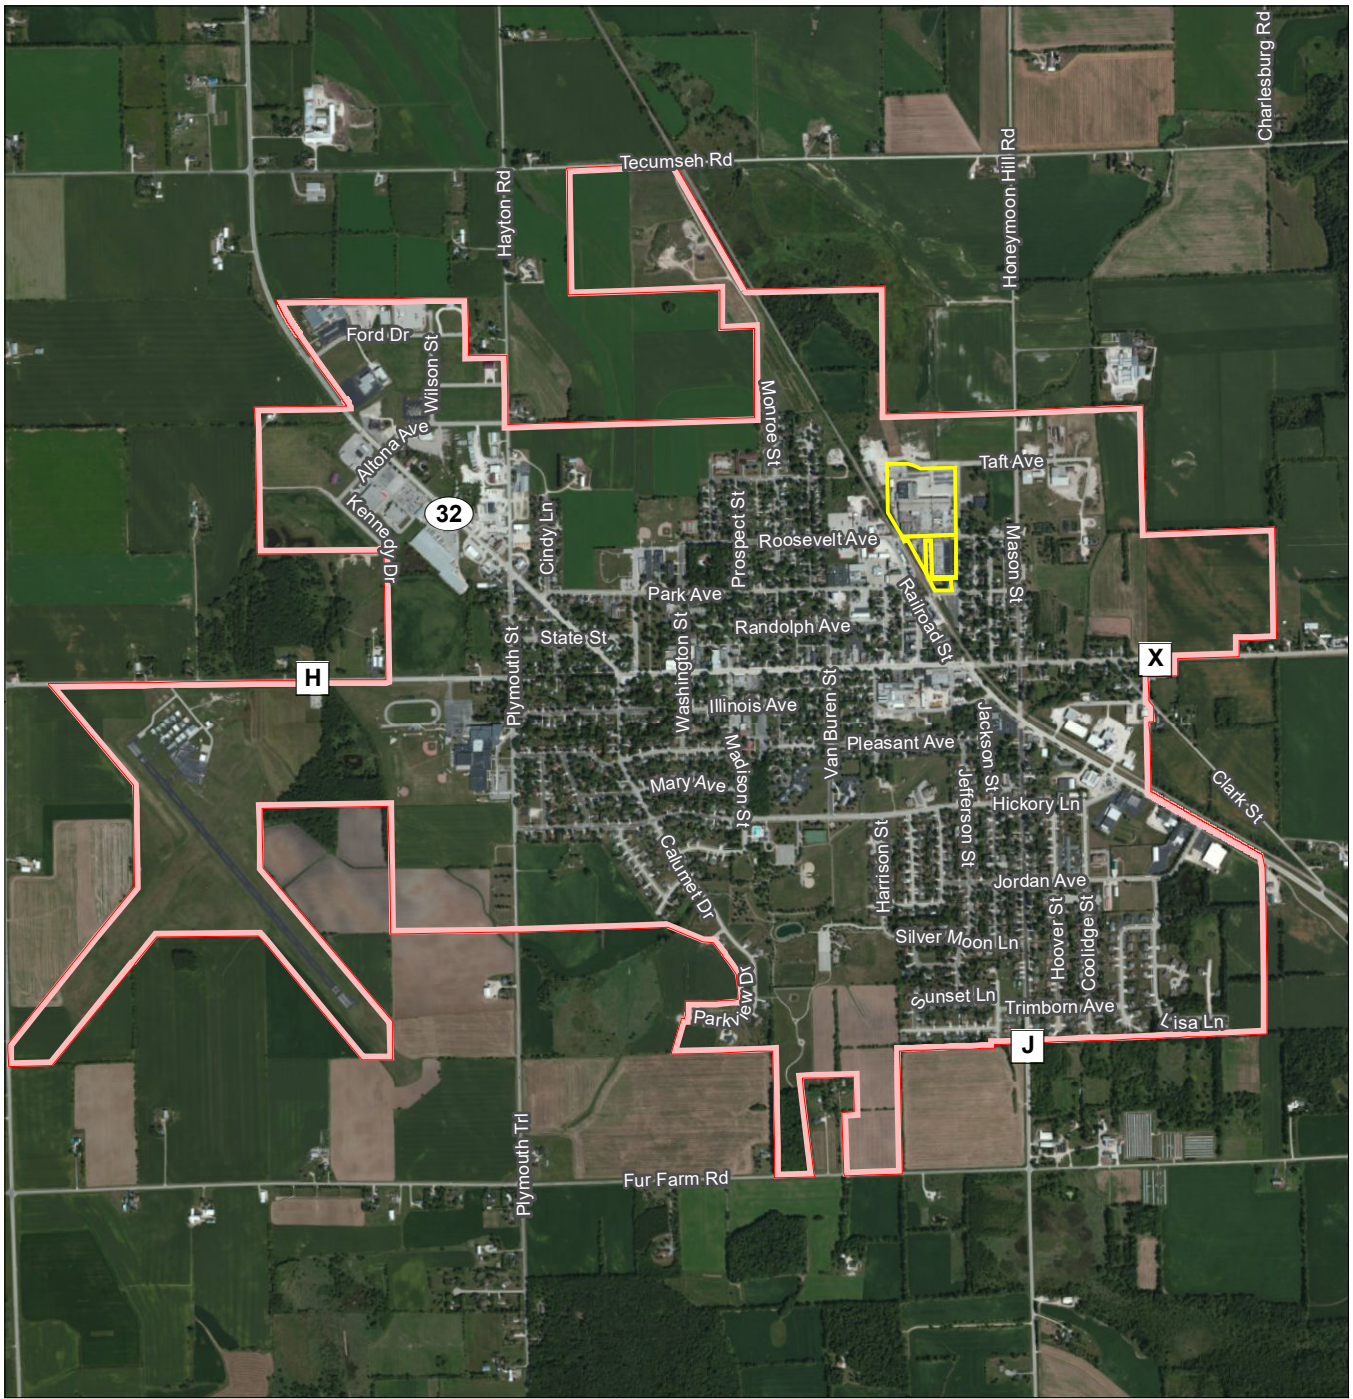

The Documentation of Completed Demolition Activities were performed in accordance with generally accepted practices of the profession for performing similar studies at the same time and in the same geographical area. Stantec observed that degree of care and skill generally exercised by the profession under similar circumstances and conditions. No other warranty is expressed or implied.

Stantec observations, findings, and opinions must not be considered as scientific certainties but only an opinion based on our professional judgment concerning the significance of the data gathered during Documentation of Completed Demolition Activities. Specifically, Stantec does not and cannot represent that the Site contains no hazardous or toxic materials or other latent condition beyond that observed by Stantec.

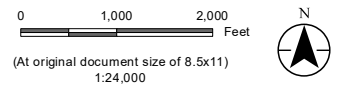

Any reliance on this document by any third party is strictly prohibited. The material in it reflects Stantec's professional judgment in light of the scope, schedule and other limitations stated in the document and in the contract between Stantec and the Client. The opinions in the document are based on conditions and information existing at the time the document was published and do not take into account any subsequent changes. In preparing the document, Stantec did not verify information supplied to it by others. Any use which a third party makes of this document is the responsibility of such third party. Such third party agrees that Stantec shall not be responsible for costs or damages of any kind, if any, suffered by it or any other third party as a result of decisions made or actions taken based on this document.
