RE: Additional Investigation/Remediation – Phase I Update
Shorewood Commons
3330 University Avenue
Shorewood Hills, WI
BRRTS # 02-13-560698

Dear Ms. Koepke:

As outlined in the August 9, 2021, *Additional Investigation/Remediation Work Plan – Phase I*, Resource Engineering Associates, Inc. (REA) performed additional vapor sampling in the new building at 3320 University Avenue (the former location of 3310 University Avenue), installed an additional monitoring well (MW-5) and piezometer (PZ-3) on the north side of Locust Drive, developed them and sampled the new wells, along with the existing wells at the site in July through September 2021. The work performed and the sample results are outlined below.

Vapor Sampling

On July 27, 2021, REA installed a Cox-Colvin Vapor Pin in the floor of the parking garage under the building at 3320 University Avenue (SS-21). The Vapor Pin was installed according to manufacturer's guidance. After installation, REA collected a sub-slab vapor sample from the Vapor Pin. A 1.5" PVC coupler was first affixed around the Vapor Pin using non-volatile organic compound (VOC) containing modeling clay to provide a seal at the floor to form a dam around the pin. The PVC coupler dam was then filled with water to check for leaks around the dam and to ensure no short circuiting through the vapor point. Teflon ¼" tubing was attached to the Vapor Pin hose barb and then connected to a photoionization detector (PID). The PID reading at the vapor point was 0.0 parts per million (ppm). The PID was used to remove air from beneath the slab to insure the presence of undiluted soil gas. The Teflon tubing was then connected to a 6 liter Summa canister equipped with a regulator so that the sample was collected over a 30 minute period. This ensured a sampling rate of less than 200 mL/min as recommended by the DNR. The Summa canister was then opened and allowed to collect a sample for 30 minutes. The initial vacuum on SS-21 was 30.0 psi. The vacuum reading after 30 minutes was 8.0 psi. The location of SS-21 is shown on **Figure 1**. Two additional 6 liter Summa canisters equipped with regulators to collect a 24 hour sample were opened in the east portion (AI-21) and west portion (AI-22) of the parking garage under 3320 University Avenue and allowed to collect indoor air samples. The initial vacuum on both indoor air sample canisters were 30.0 psi. The vacuum readings on July 28, 2021, after 24 hours, were 4.0 in AI-21 and 3.0 in AI-22. All three summa canisters were shipped to the Pace Analytical in Minneapolis, Minnesota on July 28, 2021, where they were analyzed for VOCs. Tetrachloroethene (PCE) was detected in the sub slab sample (SS-21) at a level of 0.46 parts per billion by volume (ppbv) and trichloroethene (TCE) was detected in the same sample at 0.25 ppbv. Both levels are well below the Residential Sub Slab Standards of 210 ppbv for PCE and 70 ppbv for TCE. PCE was not detected in either indoor air sample. TCE was detected at 0.071 ppbv in AI-21 and at 0.18 ppbv in AI-22; both levels are below the Residential Indoor Air Standard of 0.39 ppbv. The location of SS-21 is shown on **Figure 1**. The laboratory analytical results are shown on **Table 1** and the analytical reports are shown in **Appendix A**.

Monitoring Well Installation/Groundwater Sampling

On August 26 and 27, 2021, REA, with the help of Probe Technologies, installed a monitoring well (MW-5) and a piezometer (PZ-3) on the north side of Locust Drive in the vicinity of former soil boring B-402. Ground penetrating radar was used to locate the wells because of the difficulty drilling in this area because of the setbacks from the railroad and several utilities in the area. The monitoring well, MW-5, was screened between 15 and 25 feet below grade and the piezometer, PZ-3, between 35 and 40 feet below grade. The bore holes were made with 4.25 inch hollow stem augers and then converted to 2 inch diameter monitoring wells. Soil samples were collected continuously until the groundwater was intersected for the monitoring well (MW-5) and recorded on the boring log (**Appendix B**). The piezometer (PZ-3) was blind drilled. The well/piezometer were constructed using Schedule 40 PVC riser and 0.010-inch slot PVC screen. The wells have flush mounted covers and well caps with padlocks. The monitoring well and piezometer were developed on September 16, 2021, by surging them and then removing 10 well volumes to establish a hydraulic connection with the surrounding formation. Approximately 15 gallons were removed from MW-5, and 25 gallons from PZ-3. The well casing elevations were surveyed to Mean Sea Level. Well construction and development were recorded on WDNR Forms 4400-113A&B and are shown in **Appendix B**. All soil cuttings and purge water were collected in 55-gallon drums and are staged on site behind the building at 3330 University Avenue until arrangements can be made for proper off-site disposal.

On September 16, 2021, groundwater samples were collected from the six monitoring wells and the four piezometers at the site. Depth to water readings were measured in the monitoring wells, as well as the piezometers, at the time of sampling. The wells and piezometers were first purged of three well volumes and then the samples were collected using new disposable bailers and then placed in containers provided by TestAmerica, Inc. and submitted to the laboratory for analysis of VOCs. Monitoring well/piezometer locations are shown on **Figures 2.1 and 2.2**. Depth to water readings and water table elevations are shown in **Table 2**.

Monitoring well MW-1R was dry and could not be sampled. Monitoring well MW-3 (360 µg/L), PZ-1 (250 µg/L), and PZ-4 (72 µL) all contained levels of PCE above the NR 140 Enforcement Standard (ES) of 5 µg/L. MW-2 (4.8 µg/L) and MW-9 (1.2 µg/L) contained PCE at levels above the NR 140 Preventive Action Level (PAL) of 0.5 µg/L. Piezometers PZ-1 (8.1 µg/L) and PZ-4 (90 µg/L) contained TCE at levels above the NR 140 ES of 5 µg/L and monitoring well MW-2 (1.8 µg/L) contained TCE above the NR 140 PAL of 0.5 µg/L. No other wells contained detectable levels for either PCE or TCE. Sample results are shown in **Table 3**. The Groundwater Contour Map for this sampling round is shown on **Figure 2.1**, a Potentiometric Groundwater Map is shown in **Figure 2.2**, and the PCE Isoconcentration Contour Map is shown on **Figure 3**.

Wells MW-1, MW-2, MW-3, MW-9, PZ-1 and PZ-4 have a history of the occurrence of chlorinated compounds in samples. Plots of those compounds for these wells are presented on **Figures 4 through 9**, respectively. Each of those figures also show the linear trend for PCE (dotted lines), and all show a significant downward trend.

Conclusions and Recommendations

Based on the results of the vapor intrusion sampling done in 3320 University Avenue, the vapor mitigation system is effectively limiting vapor intrusion in the building. Additionally, groundwater sample results indicate that PCE and TCE contamination have not migrated north of Locust Drive

3510 Parmenter Street

Middleton, WI 53562

Phone: 608-831-5522
Fax: 608-831-6564
Web: www.reaeng.com

As Figures 4 through 9 show, the concentrations of chlorinated compounds are declining at a significant rate. Although there have been slight rebounds recently, the trend is still clear, indicating that natural attenuation and degradation is occurring at the site. Wells MW-4 and PZ-2 have continuously yielded samples with no detected contaminants. Based on these results, Flad Development and Investment Corporation is requesting that the Shorewood Commons site be considered for closure.

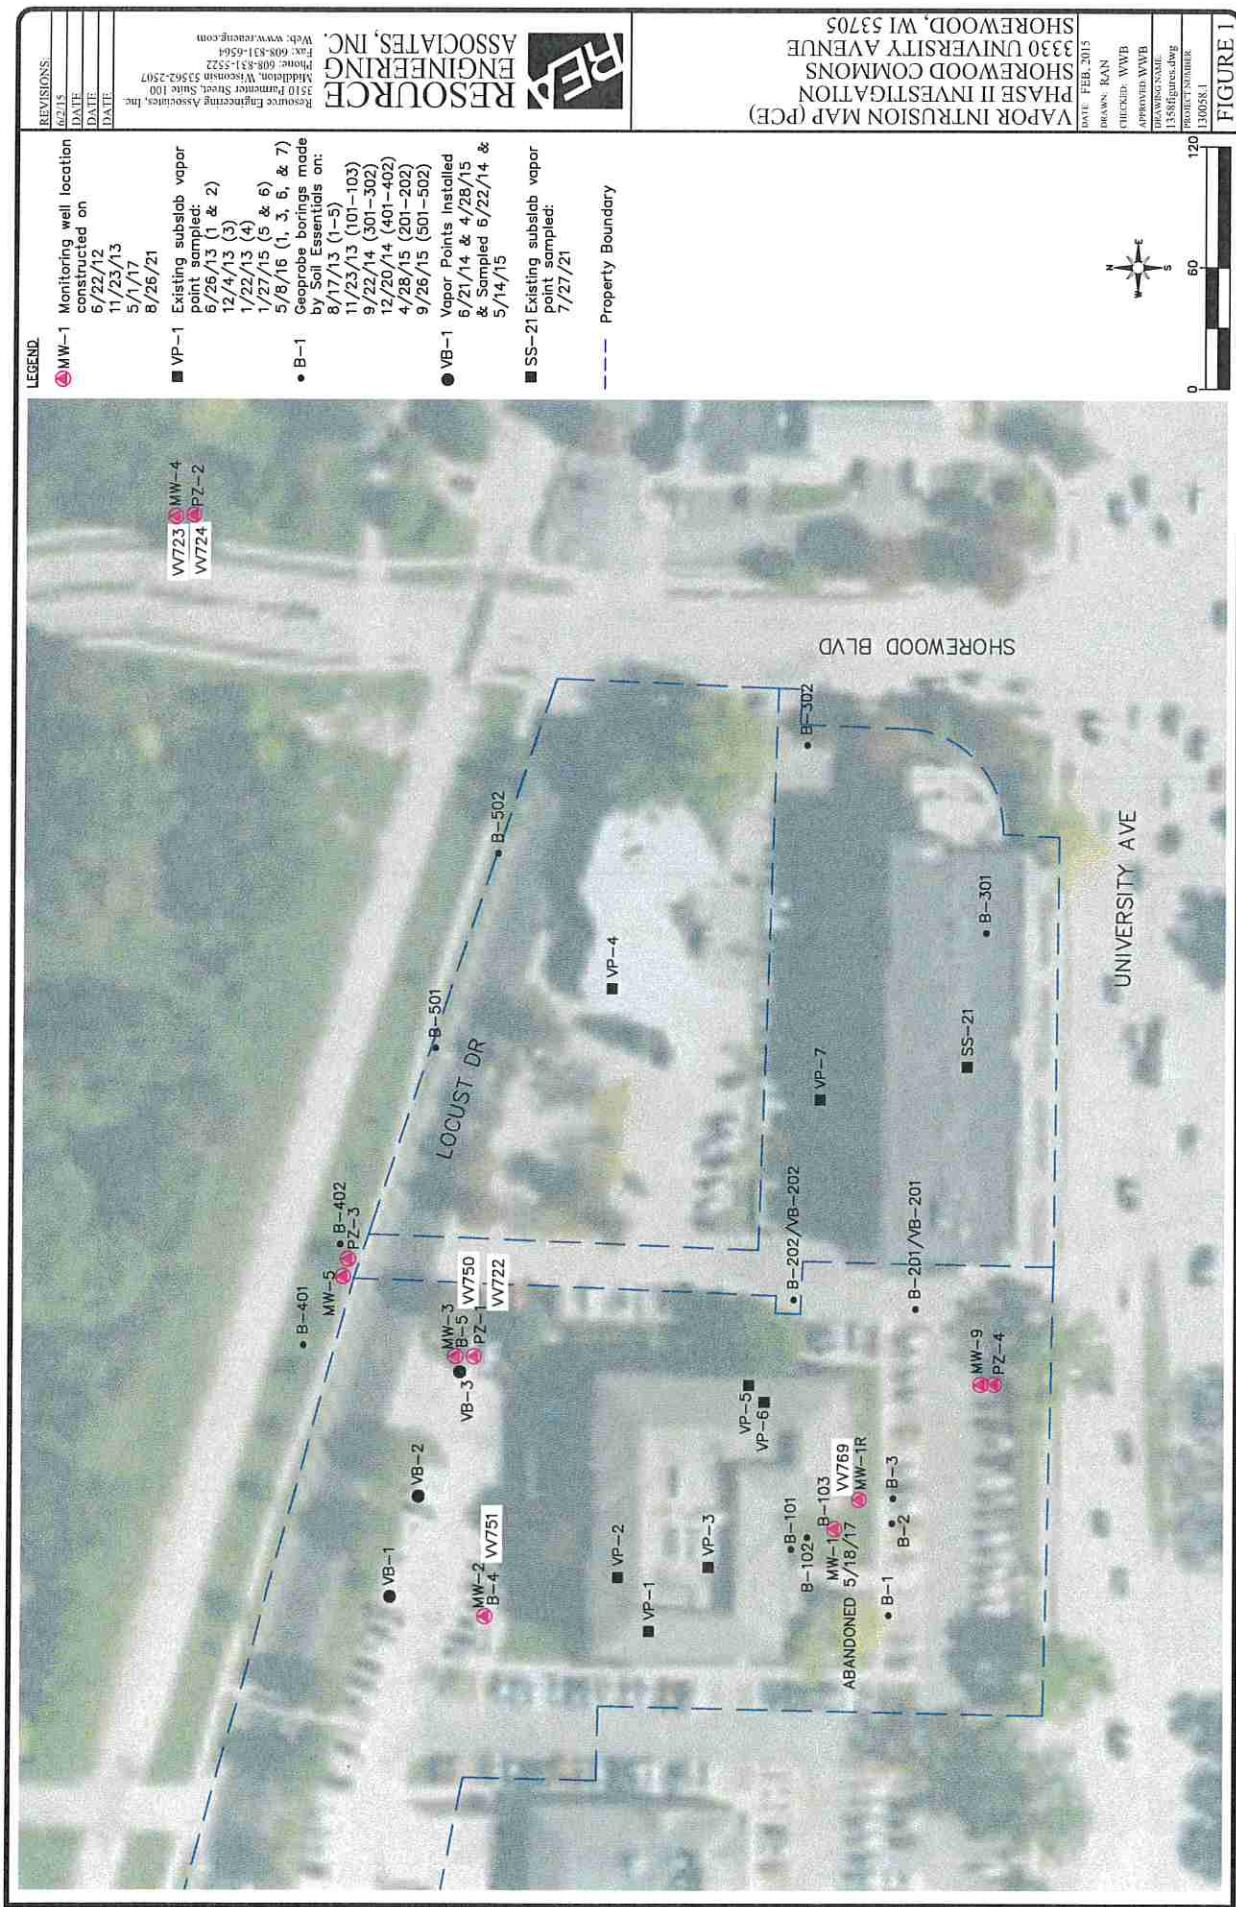

If you have any questions concerning this letter report, or the project in general, feel free to contact Ryan Nehls at (920) 210-0922 or rnehls@reaeng.com, or Bill Buckingham at (608) 220-3804 or bill@reaeng.com.

Sincerely,

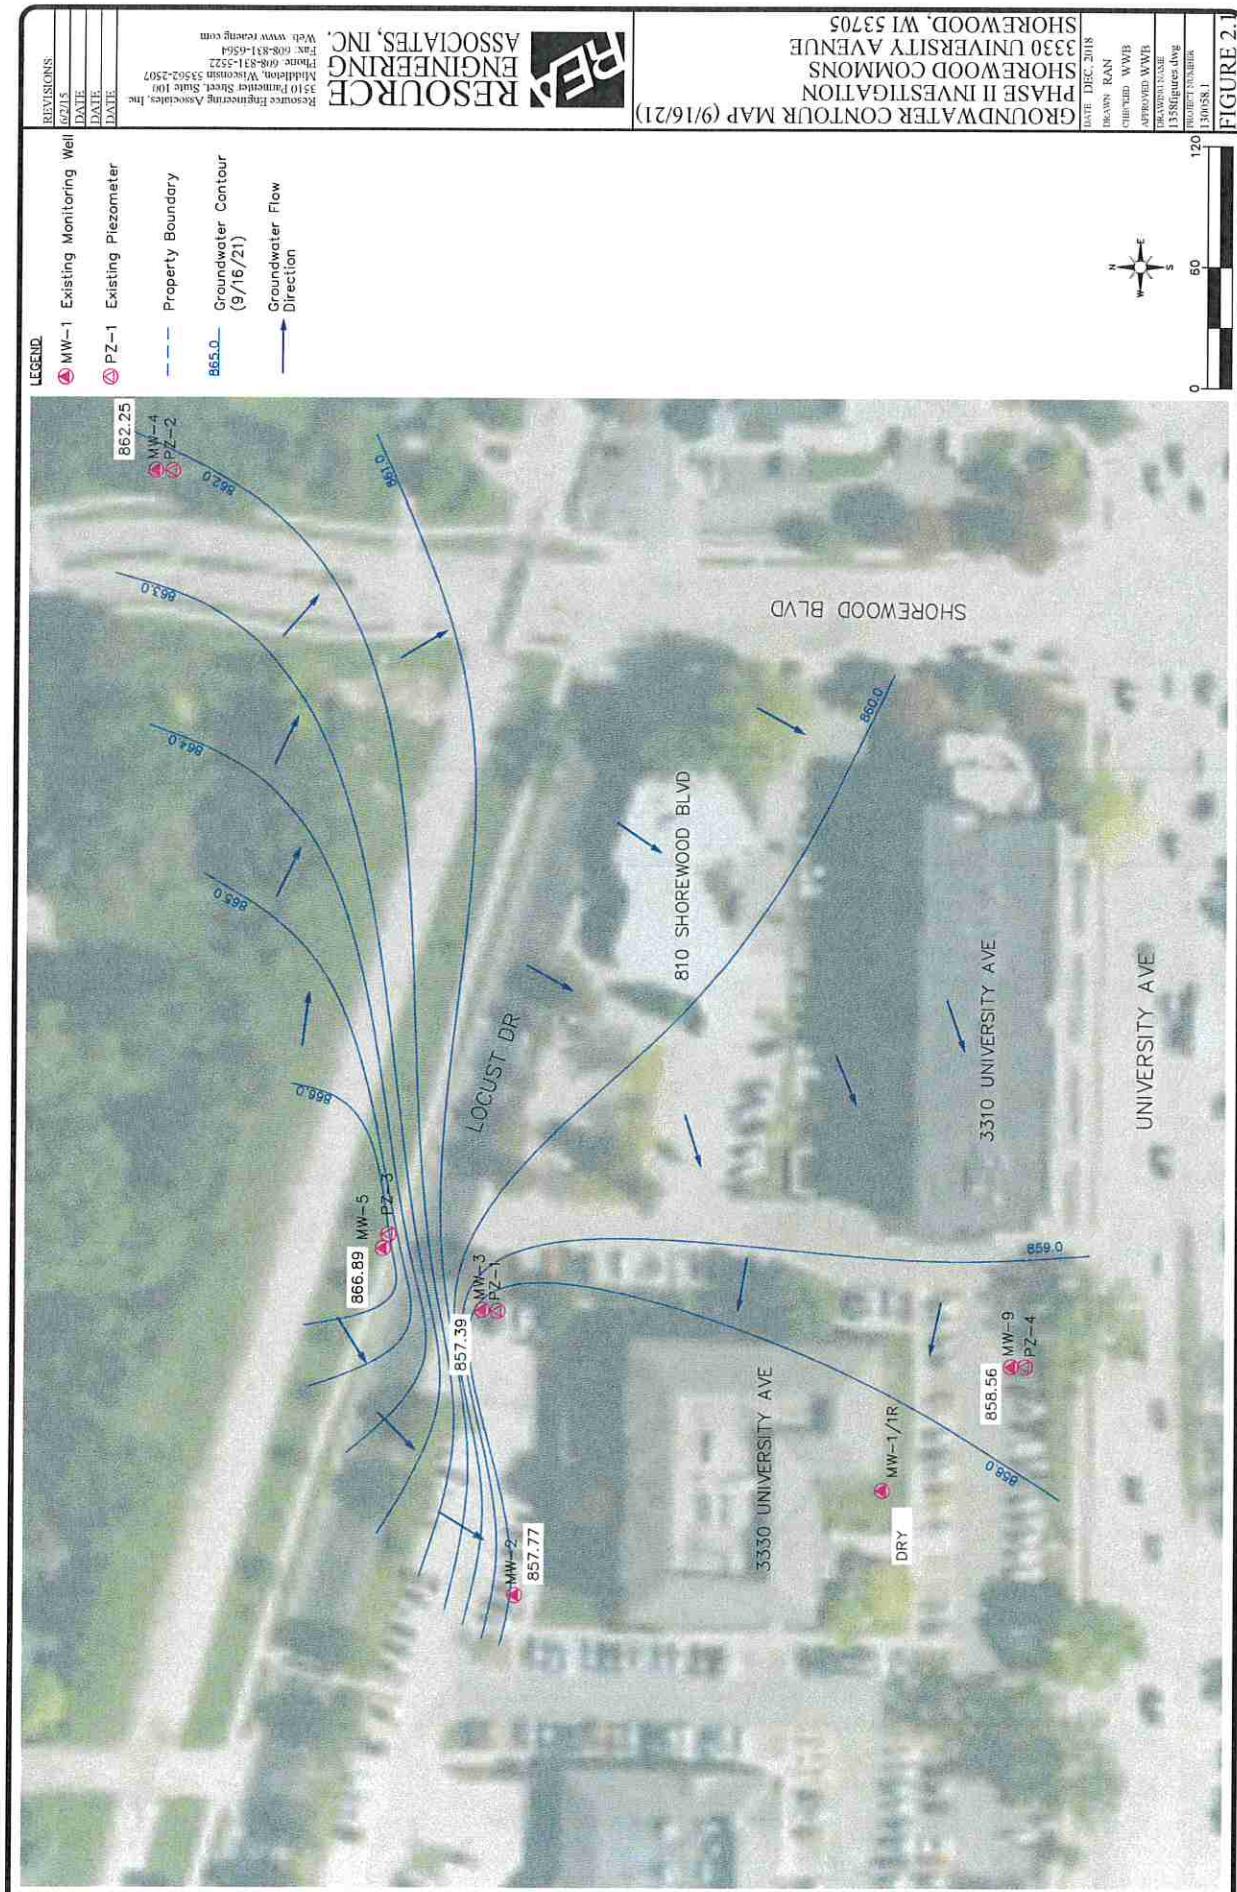

William W. Buckingham, P.E.
Senior Engineer

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

No additional comments.

Receipt

The samples were received on 9/17/2021 11:10 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.3° C.

GC/MS VOA

Method 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-3 (500-205369-2) and PZ-1 (500-205369-6). Elevated reporting limits (RLs) are provided.

Methods 624, 8260B: Methylene chloride was detected in the following samples: Field Blank (500-205369-10). The method blank associated with these samples was below the reporting limit for Methylene chloride. Methylene chloride is a known lab contaminant; therefore all low level detects for this compound could be suspected as lab contamination.

Method 8260B: The laboratory control sample (LCS) for 620340 recovered outside control limits for 1,1,2,2-Tetrachloroethane. This analyte was biased low in the LCS and was not detected in the associated samples. The data have been reported. MW-2 (500-205369-1), MW-3 (500-205369-2), MW-4 (500-205369-3), MW-5 (500-205369-4), MW-9 (500-205369-5), PZ-1 (500-205369-6), PZ-2 (500-205369-7), PZ-3 (500-205369-8), PZ-4 (500-205369-9), Field Blank (500-205369-10) and Trip Blank (500-205369-11)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: Resource Engineering
Project/Site: 3330 University Ave

Job ID: 500-205369-1

Job ID: 500-205369-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS and/or LCSD is outside acceptance limits, low biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
D	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.3
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

RE: Project: 130058.3 3330 University Ave
Pace Project No.: 10572248

Dear William Buckingham:

Enclosed are the analytical results for sample(s) received by the laboratory on July 29, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:
• Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Matt Ray

QUALIFIERS

Project: 130058.3 3330 University Ave
Pace Project No.: 10572248

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.
