Gina:

Sounds good. Based on your response I will be putting in a request for the SI along with the remediation budget. Does that sound right?

Thanks, I was thinking of you as the landfill just got back to me about my generator request (in an email less than ½ before yours!)

Robyn,

Sorry I didn't get back to you ASAP, your email was buried.

No I would not do another pre-excavation gw sampling-just post. And I would plan for 4 quarterly rounds starting 6 months after the excavation is completed. It is likely the results will show you need less than 4, but just in case.

Email or call with any questions.

Thanks.

Gina:

Do you think you want one more round of groundwater monitoring pre-excavation? I am putting together my cost request right now. I plan to submit a full SI (after listening at Consultants Day) and have no budget so I was going to include that to upgrade my report with all of the details. I can also submit a request for the excavation at the same time. I have done it that way in the past, and I have had some project managers prefer I just do the SI request and send it in with the recommendations etc. Do you have a preference? Sorry this took so long to get to, time flew by and I thought I should try to get this taken care of so I can get it done this year!

Thanks for all of your time on this!

Robyn,

I looked over the SI report you submitted in January, and it is my opinion that to get this site to closure, a small source removal is necessary. The concentrations here are very high, but appear very limited in extent.

Please submit a U&C estimate for costs for the excavation, sampling, disposal and subsequent follow up groundwater sampling.

Thanks.
