WDNR BRRTS#: 03-43-560923 PECFA Claim #: 54124-9999-10

City of Gillett Beth Rank 150 North McKenzie Avenue Gillett, WI 54124

Dear Ms. Rank,

Enclosed is our "Site Investigation Field Procedures Workplan" concerning the Nicolet Trails Campground site in Gillett, Wisconsin. This document outlines the procedures and the methods used to conduct such an investigation.

A copy of this workplan will be sent to the Wisconsin Department of Natural Resources for review.

We appreciate the opportunity to be of service to you on this project. Should you have any questions or require additional information, do not hesitate to contact our La Crosse office.

Sincerely,

1

En T. Powell

Jason T. Powell Staff Scientist

C: Robert Klauk – WDNR

# LIST OF ACRONYMS

**AST** - Aboveground Storage Tank

**ASTM** - American Society for Testing and Materials

Cd - Cadmium

**DOT** - Department of Transportation

DRO - Diesel Range Organics

**ES** - Enforcement Standards

gpm - gallons per minute

**GRO** - Gasoline Range Organics

HNU - brand name for Photoionization Detector

**ID** - inside-diameter

**LAST** - Leaking Aboveground Storage Tank

**LUST** - Leaking Underground Storage Tank

MSL - Mean Sea Level

**MTBE** - Methyl-tert-butyl ether

**MW** - Monitoring Well

**NIOSH** - National Institute for Occupational Safety & Health

**NR** - Natural Resources

**OD** - outside-diameter

**PAH** - Polynuclear Aromatic Hydrocarbons

**PAL** - Preventive Action Limits

Pb - Lead

**PECFA** - Petroleum Environmental Cleanup Fund

**PID** - Photoionization Detector

**POTW** - Publicly Owned Treatment Works

ppb ug/kg - parts per billion

**ppm mg/kg** - parts per million

psi - pounds per square inch

**PVC** - Polyvinyl Chloride

**PVOC** - Petroleum Volatile Organic Compounds

**RAP** - Remedial Action Plan

**scfm** - standard cubic feet per minute

SVE - Soil Vapor Extraction

**USCS** - Unified Soil Classification System

**USGS** - United States Geological Survey

**UST** - Underground Storage Tank

**VOC** - Volatile Organic Compounds

WDNR - Wisconsin Department of Natural Resources

WPDES - Wisconsin Pollutant Discharge Elimination System

# **OBJECTIVES**

# **Requirements of the WDNR**

A Site Investigation is required by the Wisconsin Department of Natural Resources (WDNR) by authority of Section 292.11 of the Wisconsin Statutes. According to the WDNR, any soil that tests over 10 ppm Gasoline Range Organics (GRO) or Diesel Range Organics (DRO) requires an investigation. Any soil that tests over the Chapter NR720 Groundwater RCLs, Direct Contact RCLs, or Soil Saturation Values an investigation and possible remediation. Any groundwater that tests over the Preventive Action Limits (PAL) or Enforcement Standards (ES) for compounds listed in Chapter NR140 of the Wisconsin Statutes requires an investigation and possible remediation. For a further explanation of WDNR rules and regulations, see Appendix D.

# **Requirements of the PECFA Program**

According to rules adopted in May 2006, the maximum allowable cost for an initial Site Investigation shall be no more than \$20,000 unless pre-approved by PECFA. All consultant and commodity service costs must not exceed the PECFA Usual and Customary Charges.

# Purpose of Document

This document briefly outlines all methods and procedures used by METCO personnel concerning "Site Investigations". These guidelines are strictly followed unless changed by managing personnel, site conditions, or project situations. All changes will be clearly noted.

All work conducted by METCO is undertaken in accordance with approved methods and regulations of the WDNR Bureau for Remediation and Redevelopment.

This document is site specific and will always be on-site during the project.

# **INTRODUCTION**

# SITE BACKGROUND

# Facility

A bulk petroleum facility existed on the property from at least the 1930's until the mid to late 1980's. The facility consisted of at least five above ground storage tanks (ASTs) for the storage of gasoline, diesel, and fuel oil. Two underground storage tanks (USTs) were also affiliated with the bulk facility, their contents are unknown. No other ASTs or USTs are currently known to exist on the subject property.

In the summer of 2013, the City of Gillett encountered two steel USTs on the property while installing a water line on the property. The USTs were subsequently removed from the property. On July 12, 2013, a test pit was dug in the area of the removed USTs and two soil samples (S-1 and S-2) were collected from the test pit for DRO and VOC analysis. The soil sampling results showed DRO concentrations ranging from 162 to 3,810 ppm along with various detects for VOCs. The petroleum contamination was reported to the WDNR, who then required that a site investigation be completed.

Other nearby LUST/ERP sites in this area include the Gillett City Trail Property (325 feet southwest), Mr B's Garage (600 feet south-southwest), and Kozak's Service Station (650 feet south-southwest). At this time, we do not suspect that these sites are impacting or being impacted by the subject property.

# **Potential Risks and Impacts**

The subject property and surrounding properties are all served by the City of Gillett municipal water. The nearest municipal well (Well #2) exists approximately 750 feet to the west of the subject property. No private potable wells are known to exist in this area.

METCO is not currently aware of any other impacts, receptors, risks, or local problems associated with the subject property.

# SITE CONDITIONS

# Topography

According to the USGS Hydrologic Atlas, the subject property is located in the southern portion of the Menominee-Oconto-Peshtigo River Basin. This area is characterized by an irregular rolling landscape consisting of an uneven cover of glacial deposits overlying an eroded bedrock surface.

The elevation of the site is approximately 800 feet above Mean Sea Level

(MSL). See Appendix A for site location.

# Geology

Native unconsolidated materials in this area generally consist of silt/clay to silty sand. The unconsolidated materials are underlain by sandstone bedrock at approximately 250 feet below ground surface.

# Hydrology

The nearest surface water is Christie Brook, which exists approximately 650 feet to the northeast of the subject property.

# Hydrogeology

Groundwater is estimated to exist at approximately 10-12 feet below ground surface in this area. Groundwater flow direction is expected to be toward the north to northeast.

# SCOPE OF WORK

### Site Investigation

An investigation consists of collecting samples of soil and groundwater for analysis by a laboratory for compounds related to petroleum products. The WDNR requires that the investigation determine the degree and extent of contaminants in these mediums, which is commonly referred to as "defining the contaminant plume". Further background information will also be collected to assist in the investigation.

# **Geoprobe Project**

METCO has proposed a 1-2 day Geoprobe Project. We propose 6 to 10 borings to 10-15 feet with soil and groundwater sampling. The Geoprobe will be used to collect soil samples at various depths in order to determine the general extent of contaminants in the subsurface environment.

The goal of the Geoprobe Project is to complete the following:

- 1. Determine general subsurface geotechnical characteristics.
- 2. Determine general extent of the contaminants in the unconsolidated deposits.
- 3. Determine the general extent of contaminants in groundwater, if applicable.

Environmental Consulting, Fuel System Design, Installation and Service Page 4

4. Determine if contaminants have migrated to competent rock, if applicable.

This data will either completely define the extent of contamination or be used to guide the Drilling Project if required.

# **Drilling Project (if required)**

METCO has proposed 6 to 10 boreholes to be completed on/off site. METCO has also proposed 5 to 8 monitoring wells to be installed on/off site. Based on the results of the Geoprobe project, we will be able to determine how many monitoring wells will need to be installed.

The goal of the Drilling Project is to complete the following:

- 1. Collect a soil sample for field analysis every 2.5 feet of boring.
- 2. Collect at least two soil samples for laboratory analysis in every boring.
- 3. Verify, through sampling, the horizontal and vertical extent of soil contamination, including smear zones.
- 4. Install monitoring wells in an arrangement that fully defines the horizontal and vertical extent of groundwater contamination.
- 5. Develop the monitoring wells.
- 6. Collect at least two rounds of groundwater samples from the monitoring wells.
- 7. If conditions warrant, perform slug tests on at least one monitoring well.

# **Report Preparation**

The final report, prepared by METCO, will include background information, observations, procedures, methods, field data, laboratory analysis, site maps, data analysis, risk assessment, conclusions, and recommendations concerning all activities conducted for this project. This report will be submitted to the client and the WDNR for review and discussion.

# METCO PROCEDURES AND METHODS

# Geoprobe

The Geoprobe consists of a truck mounted, hydraulically driven unit that advances 1-inch diameter, 3 or 4-foot long, stainless steel rods into the subsurface. At desired depths, either a soil or water sample can be collected.

A 4-foot or 5-foot long,  $\frac{1}{2}$  or 1-inch diameter soil sampler is advanced to the sampling location. At desired depths, a soil sample is collected and brought to the surface for analysis.

All Geoprobe holes are properly abandoned to ground level using bentonite clay and a surface seal.

# Drilling

Drilling is conducted with a truck mounted auger drill rig. To penetrate any unconsolidated materials, work is conducted in accordance with ASTM D-1452 "Soil Investigation and Sampling by Auger Boring". If bedrock is encountered and cannot be penetrated with auger boring, an accepted air-rotary drilling procedure will be used.

Sampling unconsolidated materials is done in accordance with ASTM D-1586 "Penetration Tests and Split-Barrel Sampling of Soils" using a 2-inch outside diameter (O.D.), 2.5 foot split spoon sampler. Using this procedure, a split spoon sampler is driven into the soil by a 140-pound weight falling 30-inches, and a soil sample collected.

All borings are properly abandoned to ground level using bentonite clay.

# HNU Screening

Each of the samples, for headspace analysis, are placed in a clean, clear, plastic Ziploc bag. These containers are to be filled ¼ full. All containers are the same size and filled to the same volume. The containers are then sealed.

Once collected and sealed, samples are shaken for 30 seconds to break apart soil clods. They are then allowed to establish headspace. The following table is used to determine headspace equilibration time.

Outside temperature Time to establish headspace

- <40 deg. F 40 minutes
- 41-55 deg. F 20 minutes
- 56-69 deg. F 10 minutes
- >70 deg. F 5 minutes

To take readings, the HNU probe is inserted into the plastic bag halfway

Environmental Consulting, Fuel System Design, Installation and Service Page 6 between the sample and the highest meter response recorded. The samples are screened with a MODEL DL-102 HNU Meter equipped with a 10.6 eV lamp. Metered calibration is done at the beginning of each workday. Other notes taken are as follows:

- 1. Temperature and weather conditions.
- 2. Date of last factory calibration.
- 3. Field calibration gas used and concentration.
- 4. Date and time of last calibration.
- 5. Instrument gain setting.
- 6. Erratic instrument readings.
- 7. Cleaning or repairs performed in the field.
- 8. Sample moisture (saturated, wet, moist, damp, dry).
- 9. Petroleum odors or staining of samples.
- 10. Any instrument quenching.
- 11. Other relevant information.

# **Monitoring Wells**

Groundwater monitoring well installations are completed under the direction of a METCO hydrogeologist and in accordance with Wisconsin Department of Natural Resources Chapter NR141, "Groundwater Monitoring Well Requirements." The monitoring wells are constructed of flush-threaded, twoinch inside diameter schedule 40 or 80 polyvinyl chloride (PVC) piping. Ten-foot well screens with 0.010-inch slots are installed approximately 5 to 6 feet into the watertable. A uniform washed sand is installed around the well screens to serve as a filter pack. Granular bentonite is used above the filter pack to provide a surface seal. Steel, locking protective well casings are cemented in at each well. Any variances from NR141 will be reported to the WDNR.

Each well is developed by alternately surging and purging with a clean polyethylene bailer for 20 to 30 minutes to remove fines from the well screen, after which ten well volumes are removed using a submersible pump.

Groundwater level measurements are obtained using an electronic water level indicator. All measurements are recorded to the nearest 0.01-foot. The probe is thoroughly washed between measurements.

At least two rounds of samples are collected using a bottom loading, disposable, polyethylene bailer and disposable polyethylene cord.

Environmental Consulting, Fuel System Design, Installation and Service Page 7

Approximately four well volumes are purged from each well before collecting samples.

Depending on site conditions and groundwater sampling results, slug tests may be conducted on two or three of the monitoring wells to determine hydrogeologic parameters (hydraulic conductivity, transmissivity, and flow velocity). During the slug test, groundwater in a monitoring well is displaced using a solid plastic slug, while water levels are recorded using a transducer and data logger. Water levels are recorded until the water level in the well returns to equilibrium. Slug test data is evaluated using the Bouwer and Rice method.

# Well Elevation Survey

All wells are surveyed to the nearest 0.01-foot MSL by a qualified surveying company.

# Sample Analysis

Environmental samples are collected to minimize both soil disturbance and exposure of the sample to the air.

Field observations such as soil characteristics, petroleum odors, product sheens, and staining associated with the samples are continuously noted throughout sampling.

The amount of sample taken, the size of the container used, and the type of sample preservation used, will depend on the laboratory contracted and for which parameters the soil samples are analyzed. See Appendix C for LUST Sample Guidelines.

All collected samples are stored in a cooler that maintains a temperature of, at most, 4 degrees Celsius. The coolers are accompanied by a complete chain of custody and are delivered to the laboratory within two days of sampling.

The WDNR document, "LUST Analytical and Quality Assurance Guidance, July 1993" is referenced in determining what parameters in which the soil and water samples will be analyzed, and the amount of duplicates/blanks required.

# Quality Assurance/Quality Control/Waste Management

All drilling and sampling equipment advanced into the subsurface is cleaned between sampling locations. This consists of washing with a biodegradable Alconox solution and rinsing with potable water. Wash and rinse water are disposed of atop an isolated area of asphalt for evaporation or discharged into a

local storm sewer.

Drill cuttings, field screened as being contaminated, are contained in 55-gallon DOT barrels, characterized, and properly disposed of by METCO and/or client.

Development and purge waters are contained in 55 gallon DOT barrels, characterized, and properly disposed of by METCO and/or the client. Disposal options will depend on the amount of water, type of contaminants, and concentration of contaminants. All wastewater contaminants and disposal activities are recorded with complete documentation submitted to the WDNR.

# Variances

We are not aware of any variances needed at this time.

# SCHEDULE FOR INVESTIGATION PROJECT

The following is a checklist of activities that have been, or will be completed, concerning the Site Investigation, along with an estimated time frame. A typical Site Investigation takes approximately 2 to 6 months. The investigation may take up to 12 months if bedrock or groundwater is contaminated.

- 1) METCO submits a Site Investigation Project proposal to client (done).
- 2) Proposal acceptance by client. METCO notifies the WDNR that a consultant has been contracted (done).
- 3) Client obtains PECFA Packet and Site Eligibility Letter from PECFA (done).
- 4) METCO submits a Site Investigation Field Procedures Workplan to client and WDNR for review and approval (1/15/14).
- 5) METCO conducts Geoprobe Project (2-4 weeks). More than one field mobilization may be needed to complete project depending on complexity of the site and project (1 month to receive lab results).
- 6) Depending on the results of the investigation, METCO prepares a brief summary report or final report and sends copies to client and WDNR (2 months after lab results are received).

# NOTE: If groundwater is found to be impacted or suspected of being impacted by released contaminants, the WDNR will require a Drilling Project with monitoring wells.

 METCO conducts Drilling Project (2 months). More than one field mobilization may be needed to complete project depending on complexity of the site and project (1 month to receive lab results).

- METCO develops/surveys the installed monitoring wells and collects. Round 1 groundwater samples for laboratory analysis (1 month to receive lab results).
- 9) METCO collects Round 2 groundwater samples for laboratory analysis (1 month to receive lab results).
- 10) METCO completes any additional work that is needed, such as slug tests (1 month).
- 11) METCO prepares a Site Investigation report that contains all collected data and submits to the client and WDNR (3-6 months).
- 12) If no further investigation work is required, METCO will apply for "site closure" with the WDNR. Upon closure, METCO will complete the PECFA Application and submit for reimbursement (reimbursement takes 3 to 6 months).
- 13) If further investigation and/or remediation is required METCO will provide further assistance.

# **APPENDIX B/INVESTIGATION CHECKLIST**

#### SITE INVESTIGATION CHECKLIST Revised February 1992 PUBL-SW-115

This checklist was prepared by the Department of Natural Resources. It lists the necessary information to include in a site investigation report, for investigations conducted in accordance with guidelines prepared by the Emergency and Remedial Response Section, of the Bureau of Solid and Hazardous Waste Management, Wisconsin DNR. Sites include those where actions are conducted under the LUST, Spills and Environmental Repair programs. If some of this information is not submitted the report should clearly state why it is omitted. More complete information regarding site investigations is available in the Department's "Guidance on Conducting Environmental Response Actions".

The purpose of the site investigation is to 1) define the extent and degree of contamination and 2) to provide a basis for choosing a remedial action alternative. The narrative portion of the investigation report should clearly address these goals.

The Department strongly recommends that the site investigation report follow the sequence of information listed here. This will allow for a quick completeness check and more timely review of submittals. Incomplete reports will not be reviewed until all the necessary information has been received. The following information should be included in the site investigation, (as appropriate to each case):

- I. . INTRODUCTION/COVER LETTER
- Project title 1.
- 2. Purpose of report and desired department action
- 3. Client(s)
- 4. Author(s), with signatures
- 5. Scope of Services
- 6. Dates the work was performed
- 7. Date of report
  - 8. Subcontractors employed by the consultant
- п. GENERAL and BACKGROUND INFORMATION
- 1. General Information

Α. Identify the owner/operator and/or person(s) responsible: (include all applicable)

- 1. name
- address 2.
- 3. day phone number
- 4. contact person (name)
- \_\_\_\_\_ в. 5. address
  - 6. phone number
    - verification of ownership: photocopy of deed or exact legal description of property 7.
- Specify the site of contamination:
- 1. name
  - 2. phone number
    - 3. specific location (street corner, miles from an intersection, etc)
      - legal address (street address if applicable, do not supply just a P.O. Box #) а.
        - ь. location of impacted properties by latitude and longitude, to an accuracy of seconds, at a minimum (preferred method) or State Plane coordinate system
        - c. location of impacted properties by quarter, quarter, section, township, range,
        - civil township, county, or other locational criteria if site(s) are not within the Public Land Survey system type of operation: gas station, tank farm, private residence, manufacturer, etc.

1

c. Site Location Maps

4.

- General Location Map 1.
- locate on a USGS topographic base map (include quadrangle name, series and scale) locate on a plat map, if applicable
- 2. Local Base Map: the map must be drawn to scale and include the following items. Other features may also be needed:
  - bar scale a.
  - ь. North arrow
    - legend c. d.
      - location of benchmark used
        - origin of horizontal grid system e.

3. Including Site Specific Features: more than one map may be appropriate, use the local map for the base map (These maps may be used for several purposes.) location of discharge on site or facility, for example, the location of (former) 8. tank and pump islands and piping location of all buildings on site ь. c. locations of public utilities, appropriately marked property boundaries d. location of all soil borings and wells (monitoring wells and potable wells) e. f. location of soil vapor points locations of where field screenings and lab confirmation samples were taken g. nearby/neighboring structures and private wells (within 1200 feet) h. i. any nearby surface waters (within map scale) roads and paved areas, and other access areas j. k. known and potential sources of contamination known and potential receptors ι. limits of excavation m. 2. Site Background General Site Information ٨. site description, including features like: 1. - number of tanks/containers - volume/size of tanks/containers - tank/container contents, past and present - tank/container age, installation dates - tank/container construction materials - presence and type of leak detection - presence and type of secondary containment 2. general site construction history 3. any past reports of spills, or other incidents 4. periods of nonoperation 5. proximity of sensitive sites such as schools, homes, private or public wells, etc. в. \_\_\_\_\_ Description of Discharge Incident type of hazardous substances discharged, known or suspected (released, spilled, lost, etc.) 1. 2. approximate amounts discharged 3. location of impact 4. dates of discharge 5. local problems associated with discharge, e.g. vapors in homes, well contamination, etc. 6. known receptors c. Impacts existing impacts to human health, safety, welfare and the environment 1. 2. any impacts to adjacent or nearby buildings, wells or other structures 3. names and addresses of owners of adjacent properties, if those properties have been adversely impacted by the hazardous substance discharge D. Past Activities, Monitoring and Testing dates of site activities, duration and type and potential amounts of discharges 1. description of emergency actions taken and of interim actions taken, including dates 2. record of activities conducted at the site which had potential to cause contamination 3. 4. inventory record system data 5. summary of monitoring results, including: product monitoring records according to ILHR 10 groundwater monitoring - surface water monitoring - soil monitoring - sediment monitoring atmospheric monitoring 6. records of testing, repair, removal or replacement, including dates 7. tank/container/line integrity testing method testing firm dates results ε. Hazardous Waste Generation hazardous waste manifest 1. 2. was hazardous waste ever generated or stored on site?

2

- F. Description of Tank/Container and Soil Removal Activities
- description of soil conditions in the area of the tank/container excavation or in area of 1. discharge
- volume of (contaminated) soils removed from the excavation 2.
- 3. location of stockpiled contaminated soils
  - 4. type of impermeable base for stockpiled soils
  - 5. type of impermeable cover for stockpiled soils
  - if excavation was backfilled, what was used as fill? 6.
  - final deposition of soil excavated, where and how were they used? (daily cover, backfill 7. on/off site, roasted, buried, etc.)
    - 8. condition of tanks, lines, pumps (corrosion, visible leaks, etc?)
  - 9. product (other than petroleum) or waste delivery or storage systems
- G. Land Use Information
  - current and past land uses of site and neighboring properties 1.
  - description of zoning of property and adjacent properties 2.
- 3. Environmental Analysis
- Site Historical Significance A.
  - impacts or potential impacts to significant historical or archeological features due to any 1. response activities or the discharge itself
  - 2. presence of buildings greater than 50 years old on or next to discharge site
- 8 Presence of "Sensitive" Environmental Receptors
  - wildlife habitat 1.
- 2. state or federal threatened or endangered species
- 3. sensitive or unique ecosystems or species
- 4. areas of special natural resource interest
- 5. other surface waters and wetlands, as appropriate
- c. Geology (use maps as appropriate)
  - geologic origin, nature and distribution of bedrock 1.

geologic origin, nature and distribution of overlying soils 2.

- 3. thicknesses of various strata (consolidated and unconsolidated)
- 4. depth to bedrock
- 5. geophysical characteristics
  - 6. soil types and texture
    - 7. soil descriptions to include:
      - structure
      - mottling
      - voids
        - layering
        - lenses
          - geologic origin
      - Unified Soil System Classification
        - grain size distribution, if applicable
        - evidence of secondary permeability
        - odor, if evident
        - staining, if evident
    - 8. bedrock descriptions, if impacted:
      - rock type
        - grain size
          - bedding thickness
          - presence of fractures
          - orientation of fractures
          - sedimentary structures
          - secondary porosity/solutional features
      - other
      - 9. topography
    - 10. site hydrology, including
      - intermittent and ephemeral streams,
        - drain tile systems,
        - surface waters
      - wetlands
        - location of floodway and floodplain (this may be best located on a site map)
  - D. Hydrogeology
    - 1. depth to water table
    - 2. flow directions, seasonal variations

3. horizontal and vertical gradients hydraulic characteristics: (define as field test results or non-field estimates) 4. hydraulic conductivity, variation transmissivity storativity aquifer definition: 5. size use presence of aquitards 6. local and regional recharge or discharge area(s) 7. potentiometric surface 8. location, seasonal variation of groundwater divides 9. location and extent of perched groundwater 10. local and regional groundwater quality hydraulic connection between aquifers 11. 12. saturated thickness of aquifer estimates of flow volume passing below the discharge site/facility (include calculations in 13. the appendices) 14. drillers logs which indicated any abnormal drilling difficulties 15. isoconcentration maps 16. other 111. RESULTS 1. Contaminant Higration Pathway and Receptor Assessment ٨. Potential Vapor and Product Migration Pathways (include depth of burial and construction material) 1. sewer lines 2. storm sewers 3. buried power cables 4. buried telephone lines 5. tile lines 6. more permeable soil lenses water lines 7. road beds 8. 9. foundations 10. other Potential Receptors of Contamination (description of impacts or potential impacts, if applicable) buildings on site 1. neighboring basements/buildings 2. nearby wells (locations must be provided on a map) 3. nearby surface waters, including wetlands 4. 5. critical habitats 6. endangered species 7. outstanding resource waters 8. exceptional resource waters 9. sensitive or unique ecosystems 10. other c. Potential Health Impacts 1. danger of explosion 2. contaminated private wells contaminated public water supply wells 3. 4. exposure to vapors 5. dermal exposure 6. other .2. Sampling and Analysis Results (figures and tables should be used, but general trends and the overall evaluation should be in narrative form) Provide units of measurement for all results. Describe or provide the following information for each media impacted: ٨. soil chemistry results, per parameter, per location field screening results with locations identified 1. 2. laboratory (confirmation) sample results with locations identified 3. any indication of contamination of soils encountered (staining, odor, etc.) Β. groundwater sample results, per parameter, per well, over time laboratory results 1.

trends analysis

Groundwater 1. method and instruments used to obtain sample 2. any indication of contamination noticed in field whether the well was purged or not, why and how, and amount removed 3. 4. drilling method used monitoring well construction features 5. 6. abandonment methods boreholes а. monitoring wells ь. excavations c. 7. survey methods 8. sample container size 9. sample description - turbid - clear - sheen - free product 10. other c. Vapors/Ambient Air description of sample collection method 1. field screening, if conducted 2. 3. sample container 4. Quality Control and Quality Assurance A. General QA/QC (for all media impacted) name and address of laboratory 1. 2. Laboratory certification number 3. number of blanks, with results: - field blanks - trip blanks - lab spikes - split samples - replicate spikes 4. name and training of person collecting the samples (including certification, if applicable) в. \_\_\_\_\_ Field Instrument Quality Control (for all media impacted) instrument make, model and lamp energy 1. 2. limitations of field screening instruments - temperature changes - humidity changes - other 3. any repairs to the instrument 4. field instrument calibration measures conducted 5. time and frequency or schedule of field instrument calibration composition of the calibration gas used (calibration product ?) 6. 7. calibration curves used -8. correction factor if one was used

9. results of any calibration checks 10. time of day and ambient temperature when calibrations, calibration curves or calibration checks were completed 11. time and temperature that samples were equilibrated if the outside temperature is below 60°F at the time of field analysis c. Field Sampling and Transportation Quality Control and Assurance (for all media impacted) 1. sample type sample location and associated field and laboratory identification 2. 3. sampling technique used sampling techniques used to minimize exposure of samples to the atmosphere 4. 5. date and time of sampling 6. field preservation performed date and time of preservation or extraction 7. 8. decontamination procedures used during the site investigation 9. deviations from standard operating procedures 10. shipping time and technique D. Laboratory Receipt and Analysis (for all media impacted) chain of custody forms (4400-151) 1. 2. time and date of receipt of samples by the laboratory 3. sample condition on receipt by the laboratory including - the temperature of the samples and - whether the samples were properly sealed 4. time and date of analysis 5. method of analysis 6. laboratory detection limit 7. sample results with units of measurement 8. accuracy and precision of replicate spikes results or percent recovery of matrix spikes with every batch of samples not to exceed 9. eight hours 5. Investigative Wastes (for all media impacted, to include but which is not limited to contaminated water from excavations, borings, purge water, rinse waters from decontamination procedures, extra sample) analytical results (hazardous determination, if listed?) Α: Β. ultimate disposal c. other IV. SUMMARY AND EVALUATION OF RESULTS (Analysis of Degree and Extent of Contamination) 1. degree and extent of soil contamination degree and extent of groundwater contamination 2. 3. degree and extent of contamination of other media impacted 4. known or potential impacts to receptors, such as water supply wells 4. vapor migration potential 5. impacts from seepage into basements, utility lines, surface waters 6. difficulties experienced during the investigation 7. unanticipated or questionable results 8. details needing emphasis ٧. CONCLUSIONS source and type of release defined soil and groundwater contamination adequately defined? further study needed further remediation needed known or potential impacts from the release defined? clean site, ready for case closure other VI. RECOMMENDATIONS 1. Investigation Incomplete continued monitoring additional investigation 2. Remedial Action Alternatives (provide description of alternatives) e.g.:

\_ remediation method (to be) used for contaminated soil

Abbreviations:

GRO - Gasoline Range Organics, Determined by the Wisconsin Modified GRO Method

DRO - Diesel Range Organics, Determined by the Wisconsin Modified DRO Method

VOC - Volatile Organic Compounds (See Section 11.1 for a list of VOC compounds)

PVOC - Petroleum Organic Compounds (See Section 11.2 for a list of PVOC compounds)

PAH - Polynuclear Aromatic Hydrocarbons (See Section 11.3 for a list of the PAH compounds)

PCBs - Polychlorinated Biphenyls

Pb - Lead

# **APPENDIX D/WDNR DOCUMENTS**

Residential setting. Not-To-Exceed D-C RCLs from web-calculator at: http://epa-prgs.ornl.gov/cgi-bin/chemicals/cs/\_search (Chicago as climatic zone). = cancer; nc = non-cancer; Csat = soil saturation concentration; ceiling = 10%.

----> If web-calculator result or Csat exceeds 10% by weight (the ceiling limit concentration defined in RSL Users Guide), Not-to-Exceed D-C RCL defaults to 100,000 ppm.

1. Enter data in yellow cells. Numeric only values under "INPUT Site Data." For ND, use detection limit. Do not type '-', 'NA' nor 'space bar.' Leave purple cells "as is." 2. After completing data entry, See Summary in Row 872.

(22) "Wastewater and sludge storage or treatment lagoon" means a natural or man-made containment structure, constructed primarily of earthen materials for the treatment or storage of wastewater or sludge, which is not a land disposal system.

Subchapter II — Groundwater Quality Standards

NR 140.10 Public health related groundwater standards. The groundwater quality standards for substances of public health concern are listed in Table 1.

Wastewater or slutdge, which is not a land disposal system History: Cr. Register, September, 1985, No. 357, eff. 10–1-85; cr. (1m), am (7), (17) and (18), Register, October, 1988, No. 394, eff. 11–1-88; am (6), cr. (20h) and (20m), Register, March, 1994, No. 459, eff. 4–1-94; cr. (1s), (10e), (10s), (20k), r. and recr. (12), (13), Register, August, 1995, No. 476, eff. 9–1-95; cr. (14m), Register, October, 1996, No. 490, eff. 11–1-96; am (20), Register, Docernber, 1998, No. 516, eff. 1–1–99; correction in (9) made under s. 13.93 (2m) (b) 7., Stats, Register, April, 2001, No. 544; CR 02–134; cr. (1u), (1w), (1y) and (20s) Register June 2003 No. 570, eff. 7–1–03.

Note: For all substances that have carcinogenic, mutagenic or teratogenic properties or interactive effects, the preventive action limit is 10% of the enforcement standard. The preventive action limit is 20% of the enforcement standard for all other substances that are of public health concern. Enforcement standards and preventive action limits for additional substances will be added to Table I as recommendations are developed pursuant to ss. 160.07, 160.13 and 160.15, Stats.

|  | Enforcement Standard (micrograms | Preventive Action Limit (micrograms |
|--|----------------------------------|-------------------------------------|
| Substance <sup>1</sup>   | per liter — except as noted)     | per liter – except as noted)        |
| Acetochlor   | 7                                | 0.7                                 |

NR 140.14 Statistical procedures. (1) If a preventive action limit or an enforcement standard for a substance listed in Table 1 or 2, an alternative concentration limit issued in accordance with s. NR 140.28 or a preventive action limit for an indicator parameter established according to s. NR 140.20 (2) is attained or exceeded at a point of standards application:

(a) The owner or operator of the facility, practice or activity at which a standard is attained or exceeded shall notify the appropriate regulatory agency that a standard has been attained or exceeded; and

(b) The regulatory agency shall require a response in accordance with the rules promulgated under s. 160.21, Stats. No response shall be required if it is demonstrated to the satisfaction of the appropriate regulatory agency that a scientifically valid determination cannot be made that the preventive action limit or enforcement standard for a substance in Table 1 or 2 has been attained or exceeded based on consideration of sampling procedures or laboratory precision and accuracy, at a significance level of 0.05.

(2) The regulatory agency shall use one or more valid statistical procedures to determine if a change in the concentration of a substance has occurred. A significance level of 0.05 shall be used for all tests. (3) In addition to sub. (2), the following applies when a preventive action limit or enforcement standard is equal to or less than the limit of quantitation:

(a) If a substance is not detected in a sample, the regulatory agency may not consider the preventive action limit or enforcement standard to have been attained or exceeded.

(b) If the preventive action limit or enforcement standard is less than the limit of detection, and the concentration of a substance is reported between the limit of detection and the limit of quantitation, the regulatory agency shall consider the preventive action limit or enforcement standard to be attained or exceeded only if:

1. The substance has been analytically confirmed to be present in the same sample using an equivalently sensitive analytical method or the same analytical method, and

2. The substance has been statistically confirmed to be present above the preventive action limit or enforcement standard, determined by an appropriate statistical test with sufficient samples at a significance level of 0.05.

(c) If the preventive action limit or enforcement standard is between the limit of detection and the limit of quantitation, the regulatory agency shall consider the preventive action limit or

# UST Removal Site Assessment Report for Nicolet Trails Campground

# Project Number 0582-02-13

Site Address: N. Richmond Street City of Gillett, Oconto County, Wisconsin

July 26, 2013

Engineering & Surveying LLC

Prepared by Chad M. Fradette 211 N. Broadway, Suite 114 Green Bay, Wisconsin 54303 (920) 569-5765 <u>cfradette@mach-iv.com</u>

#### SUMMARY

Mach IV Engineering (Mach IV) performed a Tank System Removal Site Assessment on the subject property. The assessment revealed evidence of a gasoline and diesel fuel release associated with the subject property.

This site assessment was performed by Chad M. Fradette of Mach IV Engineering & Surveying, LLC. Chad M. Fradette is an Environmental Professional who meets the definition of an "Environmental Professional" as defined by 40 C.F.R. § 312.10(b) and is licensed by the State of Wisconsin as a Tank System Site Assessor.

Mach IV has no reported the release to the Wisconsin Department of Natural Resources (WDNR). However, Mach IV has been informed that the WDNR has been to the site and has requested soil sampling.

#### Brief Site History

The site was reportedly a petroleum bulk plant in the past. The City of Gillett has been redeveloping the site into a campground. Two steel USTs were encountered during installation of a water main. The USTs were removed by employees of Mike's Plumbing of Pulcifer, Wisconsin. Mike's Plumbing is not a UST removal firm. The USTs were reportedly constructed of steel and full of water. The USTs were removed to an unknown location and size and previous contents were not known.

#### Sampling Overview

On July 12, 2013, two soil samples were collected from near the reported location of two USTs that had been laying side-by-side. Soil samples S-1 and S-2 were collected from test pits. The soils encountered in the test pits were clay fill soils. Two soil samples were prepared and submitted to Pace Analytical, Inc., Green Bay, Wisconsin (Pace) for laboratory analysis of diesel range organics (DRO) and volatile organic compounds (VOCs).

#### Soil Sample and UST Notes

Soil samples S-1 and S-2 were collected from 5 foot below ground surface (ft bgs) and 4 ft bgs, respectively. Obvious indication of soil contamination was encountered during field screening and samples registered a PID reading of 18 ppm eq and 180 ppm eq, respectively. Heavy petroleum odor was encountered during excavation of test pit 2.

The USTs were already taken from the site and disposed at an unknown location and therefore could not be inspected.

The UST cavities were reportedly backfilled with clay fill soils from the site.

### Laboratory Analytical Results

١.

#### Soil Samples

Soil sample S-1 results reported detections of DRO (162 ppm), sec-butylbenzene (89.6 ppb), chloroform (36.2 ppb), ethylbenzene (142 ppb), cumene (48.3 ppb), p-isopropylbenzene (86 ppb), naphthalene (337 ppb), n-propylbenzene (109 ppb), toluene (156 ppb), trimethylbenzenes (TMBs)(1,168 ppb), and xylenes (492.9 ppb). The detection of DRO is above the Wisconsin Administrative Code (WAC) NR 720 screening level (100 ppm) and the detection of chloroform is above the Site Specific Groundwater Residual Contaminant Level. The chloroform is possibly a laboratory contaminant.

Soil sample S-2 results reported detections of DRO (3,810 ppm), benzene (1,070 ppb), sec-butylbenzene (3,140 ppb), ethylbenzene (1,750 ppb), cumene (968 ppb), p-isopropylbenzene (3,130 ppb), naphthalene (13,900 ppb), n-propylbenzene (1,780 ppb), toluene (645 ppb), trimethylbenzenes (TMBs)(36,780 ppb), and xylenes (18,200 ppb). The detection of DRO is above the Wisconsin Administrative Code (WAC) NR 720 screening level (100 ppm) and the detections of benzene, ethylbenzene, naphthalene, TMBs and xylenes are above the Site Specific Groundwater Residual Contaminant Level. The detection of naphthalene also exceeds the Direct Contact Standard.

The soil data table is located in Appendix B and Laboratory Analytical Reports are located in Appendix C.

#### OPINION

|  | Risk Assessment Level   |
|--|---|
|  | Based on the opinions formulated during the completion of a Tank Removal Site<br>Assessment by an Environmental Professional, the subject property represents the<br>following level of risk for contamination: |
|  | O Low Risk<br>No evidence of environmental concerns which indicate the need for further<br>investigation or review at this time.  |
| an a | $\bigotimes$ High Risk<br>Evidence of environmental concerns with the subject property which necessitate the<br>need for Investigative and/or Remedial Work.  |
|  |   |

### **CONCLUSIONS & RECOMMENDATIONS**

It is Mach IV's opinion that past use of a gasoline and/or diesel fuel USTs has led to a release on the property.

The release has led to significant DRO and gasoline contamination of soils in the former location of two USTs of unknown size. The groundwater aquifer is located at approximately 10 ft bgs and may have been impacted.

It is Mach IV's opinion that further investigation is warranted.

#### SIGNATURE(S) OF ENVIRONMENTAL PROFESSIONAL(S)

I, Chad M. Fradette, possess sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases, per ASTM E 1527-05, Section 7.5.1.

I, Chad M. Fradette, meet the definition of Environmental Professional per ASTM E 1527-05, Section Z2.1.1(3)(iii). I possess a Baccalaureate or higher degree from an accredited institution of higher education in a discipline of engineering or science and the equivalent of thirteen (13) years of full-time relevant experience.

I, Chad M. Fradette, am licensed by the State of Wisconsin, Department of Safety and Professional Services to perform Tank System Site Assessments, license no. 892926.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 CFR 312.10. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

In addition, the undersigned acknowledge and agree that the above-noted declarations and statements are accurate with regard to the subject matter of this report.

26 July 2013

Chad M. Fradette Director of Environmental Services

Date

#### QUALIFICATION(S) OF ENVIRONMENTAL PROFESSIONAL(S)

Chad M. Fradette, Director of Environmental Services, Professional Consultant

#### Experience

Director of Environmental Services with Mach IV Engineering & Surveying LLC (Mach IV); Mr. Fradette has 15 years of professional consulting experience in Illinois, Indiana, Michigan, Ohio, Texas, and Wisconsin. Mr. Fradette has managed a wide range of environmental projects including: Phase I and II Environmental Site Assessments; environmental contamination investigation and remediation; wetland delineation, mitigation, and restoration; air emissions testing; and coordination of industrial environmental programs.

Mr. Fradette has experience working with such large and diverse entities as the United States Environmental Protection Agency, the United States Army Corps of Engineers, the Wisconsin Department of Commerce, the Wisconsin Department of Natural Resources, the Illinois Environmental Protection Agency, and the Michigan Department of Environmental Quality. Additionally, he has worked with counties, municipalities, private industry, commercial developers, attorneys at law, and lending institutions.

The following examples are cited as a range of Mr. Fradette's applied experience.

- Environmental Site Assessments. Perform and manage Transaction Screens Processes, Risk Assessments, Phase I and II Environmental Site Assessment (ESA) projects for a variety of private, commercial, industrial, and undeveloped sites. These assessments are designed to identify the existence of environmental liabilities and to determine whether contamination is present on a parcel of real property.
- Environmental Site Investigations and Remediation. Perform and manage investigations and remediation on behalf of clients to ensure their compliance with state and federal regulations. These investigations and remediation include solid, liquid, and hazardous wastes. The investigations include: installing soil vapor probes, soil borings, test pits, and/or monitoring wells. Remediation includes: monitoring and evaluating for natural attenuation; ex-situ removal and placement in sanitary landfills, construction of biopiles, and land spreading; in-situ groundwater and soil vapor extraction, air sparging, and enhanced bio. Reports prepared include work plans, site investigation reports, remedial action option reports, and case closure reports involving a wide range of sites.
- Wetland Delineation, Mitigation, and Restoration. Perform and manage wetland delineation, mitigation, and restoration projects on behalf of clients to ensure compliance with state and federal regulations. Wetland delineation is designed to define the extent of wetland and the types of wetland that would be impacted by a project. Wetland mitigation is the process of constructing new wetland acreage to compensate for the loss of natural wetlands during the development process. Mitigation seeks to replace structural and functional qualities of the natural wetland type that has been destroyed. A wetland restoration re-establishes the habitats and functions of a former wetland.

# **APPENDIX G/QUALIFICATIONS**

# Ronald J. Anderson, P.G.

### **Professional Titles**

- Senior Hydrogeologist
- Project Manager

### Credentials

- · Licensed Professional Geologist in Wisconsin
- · Licensed Professional Geologist in Minnesota
- Recognized by the State of Wisconsin Department of Natural Resources (Chapter NR712) as a qualified Hydrogeologist
- · Certified by State of Wisconsin/DSPS to conduct PECFA-funded LUST projects
- Certified tank closure site assessor (#41861) in Wisconsin
- Member of the Wisconsin Groundwater Association
- Member of the Minnesota Groundwater Association
- Member of the Federation of Environmental Technologist, Inc.
- · Member of the Wisconsin Fabricare Institute

#### Education

Includes a BA in Earth Science from the University of Minnesota-Duluth. Applicable courses successfully completed include Hydrogeology, Applied Hydrogeology, Environmental Geology, Geological Field Methods, Geology Field Camp, Geomorphology, Structural Geology, Stratigraphy/Tectonics, Mineralogy/Petrology, Glacial/Quaternary Geology, Geology of North America, Oceanography, General Chemistry, Organic Chemistry, and Environmental Conservation

### **Post-Graduate Education**

Includes Personnel Protection and Safety, Conducting Comprehensive Environmental Property Assessments, Groundwater Flow and Well Hydraulics, Effective Techniques for Contaminated Groundwater Treatment, and numerous other continuing education classes and conferences.

### Work Experience

Includes nine months with the Wisconsin Department of Natural Resources Leaking Underground Storage Tank Program regulating LUST sites and since June 1990, with METCO as a Hydrogeologist and Project Manager. Duties have included: managing, conducting, and reporting tank closure assessments; property assessment, LUST investigations; spill investigations; agricultural chemical investigations, dry cleaning chemical investigations, general geotechnical/environmental investigations; Geoprobe projects (soil, groundwater, soil gas sampling); drilling projects (soil boring and monitoring wells); and remedial projects. Since 1989, METCO has sampled/consulted over 700 environmental sites.

# Jason T. Powell

# **Professional Title**

Staff Scientist

### Credentials

 Recognized by the State of Wisconsin Department of Natural Resources (Chapter NR712) as a qualified Scientist.

### Education

Includes a BS in Groundwater Management from the University of Wisconsin- Stevens Point. Applicable courses successfully completed include Hydrogeology, Applied Hydrogeology, Environmental Geology, Hydrogeology-Groundwater Flow Modeling, Groundwater Management, Structural Geology, Mineralogy, Glacial Geology, Soils, Soil Physics, Hydrology, Geochemistry, Water Chemistry, Organic Chemistry, General Chemistry, Environmental Issues.

### **Post-Graduate Education**

40-hour OSHA Hazardous Materials Safety Training course with 8-hour refresher course.

### Work Experience

With METCO since May 1992 as a Geoprobe Assistant and Geoprobe Operator. In June 1995 to July 1996 as a Environmental Technician. In July 1996 as a Staff Scientist. Duties have included: LUST investigations; general geotechnical/environmental investigations; Geoprobe projects (soil, groundwater sampling); drilling projects (soil boring and monitoring wells); remedial projects (sampling, pilot tests, system operation/maintenance) and project management.

# Eric J. Dahl

# **Professional Title**

• Hydrogeologist

# Credentials

- Recognized by the State of Wisconsin Department of Natural Resources (Chapter NR712) as a qualified Hydrogeologist.
- Registered through the Wisconsin Department of Safety and Professional Services as a PECFA consultant (#823519).
- Member of the Geological Society of America

### Education

Includes B.S. in Geology from the University of Wisconsin-Eau Claire. Applicable courses successfully completed include Environmental Geology, Physical Hydrogeology, Chemical Hydrogeology, Computer Modeling in Hydrogeology, Aqueous Geochemistry, Field Geology I and II, Mineralogy and Petrology I and II, Sedimentology and Stratigraphy, Petroleum and Economic Geology, Earth Resources, Earth History, and Structural Geology.

# **Post-Graduate Education**

40-hour OSHA Hazardous Materials Safety Training course with 8-hour refresher course.

### Work Experience

With METCO since November 1999 as a Hydrogeologist. Duties have included: Site Investigations, Phase I and Phase II Environmental Site Assessments, Case Closure Requests/GIS Registry, geoprobe projects (oversight, direction, and sampling), drilling projects/monitoring well installation (oversight, direction, and sampling), soil excavation projects (oversight, direction, and sampling), geoprobe operation, and operation and maintenance of remedial systems.

# Thomas P. Pignet, P.E.

### **Professional Titles**

- Chemical Engineer
- Industrial Engineer

### Credentials

- Licensed Professional Engineer in Wisconsin

### Education

Undergraduate: B.S. in Chemical Engineering from the University of Wisconsin. Applicable courses include the standard chemistry curriculum - basic, physical, organic, etc. - plus engineering transport phenomena, chemical unit operations (e.g. separations), fluid mechanics, etc.

### **Post-Graduate Education**

Ph.D. in Chemical Engineering from the University of Minnesota - with applicable special training in absorption & catalysis; M.S. in Industrial Engineering from the University of Wisconsin - Milwaukee - with special emphasis on statistical techniques and data analysis. Applicable further training: continuing education, semester-length courses in [1] Understanding Environmental & Safety Regulation; [2] Hazardous & Toxic Waste Management; plus a number of 1-2 day workshops - Fire & Explosion Safety; Small Quantity Generations of Hazardous Waste.

### **Work Experience**

Includes ten years as a research chemical engineer with a large chemical manufacturer; one year as process development engineer and demonstration-scale test analyst on a unique coal gasification project; ten years in association with UW-M, teaching and consulting to industry on energy efficiency, waste minimization and productivity improvement. One year working with a small engineering consulting firm on energy, environmental, and process improvement projects, including LUST Investigations and Remediations. With METCO since February 2000. Duties include Remedial Action Plan preparation, pilot test design and performance, remedial systems design and implementation, and general management of METCO's remedial projects.

# **Brandon A. Walker**

# **Professional Title**

Staff Scientist

# Credentials

• Registered through the Wisconsin Department of Safety and Professional Services as a PECFA consultant (#1052577).

# Education

Includes B.S. in Geography and a minor in Environmental Studies from the University of Wisconsin- La Crosse. Applicable courses successfully completed include Water Resources, Ecology, Climate Systems, Earth Science, Zoology, Fundamentals of Cartography, Interpretation of Aerial Photography, Global Issues, Urban Geography, Environmental Sociology, and Environmental Studies.

# **Work Experience**

With METCO since April 2007 as a Staff Scientist. Duties have included: soil and groundwater sampling, operation and maintenance of remedial systems, geoprobe projects (oversight, direction, and sampling), site mapping, data reduction and analysis, and reporting.

# Matt Michalski

### **Professional Title**

Staff Scientist

# Credentials

• Registered through the Wisconsin Department of Safety and Professional Services as a PECFA consultant (# 1228116).

### Education

Includes B.S. In Geography and a minor in Environmental Studies from University of Wisconsin – La Crosse: Applicable courses successfully completed include Geographic Field Methods, Water Resources, Environmental Hazards and Land Use, and Advanced Map Design.

### Work Experience

With METCO since August 2012 as Staff Scientist. Duties include: soil and groundwater sampling, operation and maintenance of remedial systems, geoprobe projects (oversight, direction, and sampling), site mapping, data reduction and analysis, and reporting.
