Subject: Vogue Cleaners Site Assessment
 Wauwatosa, Milwaukee County, Wisconsin
 Technical Direction Document No.: S05-0001-1403-001
 Document Control No.: 2301-2A-BLWM

Dear Mr. Faryan:

Under Technical Direction Document (TDD) No. S05-0001-1403-001, the U.S. Environmental Protection Agency tasked the Weston Solutions, Inc. (WESTON®), Superfund Technical Assessment and Response Team (START) to perform site assessment (SA) activities at the Vogue Cleaners Site in Wauwatosa, Milwaukee County, WI.

This letter report discusses the Site description and history, SA activities, analytical results, and threats to human health and the environment, and presents a summary and conclusions. The report has five attachments. **Attachment A** provides the figures for this letter report. **Attachment B** provides a photographic log of Site conditions. **Attachment C** provides the boring logs. **Attachment D** provides the tables for this letter report. **Attachment E** provides the laboratory analytical results and data validation report.

SITE DESCRIPTION AND HISTORY

The Site is located at 2578 N Wauwatosa Avenue, Wauwatosa, Milwaukee County, WI (**Figure 1, Attachment A**) and contained a former dry cleaning facility. The Site's geographic coordinates are 43°03'57.83" North latitude and 88°00'25.82" West longitude. The Site, located in a mixed commercial and residential area, is bordered to the north by Clarke Street, a veterinary clinic, and residential properties; to the east by residential properties; to the south by residential properties; and to the west by N Wauwatosa Avenue and residential properties. The site contains a two-story building and paved parking lot (**Figure 2, Attachment A**). The Menomonee River is located approximately 1.3 miles south of the Site.

On January 30, 2014, Symbiont, a subcontractor to the City of Wauwatosa, conducted a Phase II Environmental Site Assessment (ESA) which consisted of advancing eight soil borings on the site property with the use of a Geoprobe® rig. The soil borings were advanced to a total depth of 6 to 15 feet below ground surface (bgs) and the depth to water ranged from 1 to 12 feet bgs. One groundwater and two soil samples were collected from each boring. Tetrachloroethylene (PCE) was detected in soil at concentrations ranging from 36.6 to 76,600 micrograms per kilogram ($\mu\text{g}/\text{kg}$) and in groundwater at concentrations ranging from 0.57 to 10,900 micrograms per liter ($\mu\text{g}/\text{L}$). PCE results in soil and

Mr. Steve Faryan
EPA Region 5

-2-

Vogue Cleaners Site
June 9, 2014

groundwater exceeded the applicable Wisconsin Administrative Code (WAC) NR 720 non-industrial residual contaminant levels (RCL). PCE breakdown products were also detected in soil and groundwater, including trichloroethylene (TCE); vinyl chloride; and cis-1,2-dichloroethene (DCE). Results for some of these compounds also exceeded applicable WAC NR 720 non-industrial RCLs. Symbiont surveyed the installed temporary monitoring wells and collected water level measurements. Groundwater was determined to flow to the south of the Site.

SITE ASSESSMENT ACTIVITIES

EPA tasked WESTON START with conducting SA activities based on the analytical results from the Phase II ESA conducted on January 30, 2014. From April 21 through 25, 2014, EPA and WESTON START conducted the SA, which included the advancement of soil borings and the collection of groundwater and soil gas samples from those soil borings. **Attachment B** provides a photographic log of Site conditions during the SA activities. Soil boring advancement, groundwater sampling, and soil gas sampling are discussed in the following paragraphs.

Soil Boring

Ten soil borings were advanced at SB-1 through SB-10 to depths ranging from 7.5 to 15 feet bgs (**Figure 3, Attachment A**). Two soil borings were advanced at SB-2, a shallow boring (SB-2S) and a deep boring (SB-2D). No soil boring was completed at proposed location SB-8 due to a lack of clearance by utility companies in time for sampling to occur.

EPA field personnel installed the borings using a Geoprobe® drill rig. All locations were recorded using a global positioning system (GPS) unit. The field scientist classified the lithology of each boring and completed soil boring logs. See **Attachment C** for the boring logs.

Continuous soil core samples were collected from 3-foot intervals using the Geoprobe® drill rig. Representative soil from each 3-foot-long soil core was screened using a MultiRAE five-gas meter with a photoionization detector (PID) (for measuring organic vapors), a carbon monoxide sensor, a hydrogen sulfide sensor, a lower explosive limit meter, and an oxygen meter. Screening was done by breaking open a fresh portion of the soil and quickly placing the PID probe adjacent to the opening, creating an enclosure with a nitrile-gloved hand for vapor accumulation. PID readings were recorded on the soil boring log.

All reusable sampling equipment that contacted soil was decontaminated between each sampling location in accordance with the site-specific Field Sampling Plan (FSP). Disposable equipment was used when available and disposed in accordance with the FSP.

Groundwater Sampling

Grab groundwater samples were collected from two soil boring locations: SB-2D and SB-7 [samples VC-SB2-GW(12-14)-042214 and VC-SB7-GW(4-5)-042414]. EPA personnel used 2.25-inch-diameter Geoprobe® rods to install a temporary piezometer at each location. The piezometer consisted of a 1.5-

Mr. Steve Faryan
EPA Region 5

-3-

Vogue Cleaners Site
June 9, 2014

inch-inside-diameter, 3-foot-long, Schedule 40 polyvinyl chloride (PVC) 0.010 slot screen and PVC riser that was decontaminated between each soil boring location. Well screens were installed to straddle the groundwater table at depths ranging from 4 to 14 feet bgs.

Each location was sampled using either a peristaltic pump or a bailer following the sampling protocol detailed in the FSP. Temporary wells were not purged, nor were field parameters recorded. The groundwater samples were collected in laboratory-provided containers and submitted to STAT Analysis Corporation (STAT) in Chicago, IL, for volatile organic compound (VOC) analysis.

All sampling equipment that contacted the groundwater was either disposed or decontaminated between each monitoring well in accordance with the site-specific FSP.

Soil Gas Sampling

Ten soil gas samples were collected, one from each of the boring locations. Each soil gas sample was collected using the following procedures:

1. The tip of the soil gas probe was placed approximately 1 foot above the water table and within a sand pack extending 6 to 24 inches above and below the sampling interval.
2. The borehole was grouted to the surface with hydrated bentonite to ensure adequate sealing of the soil gas sampling probe and to minimize the exchange of atmospheric air.
3. The soil gas sampling location was allowed to equilibrate for a minimum of 24 hours. Soil gas sampling probes were not purged before sample collection.
4. Each soil gas sample was collected for 10 minutes using a 1-liter SUMMA canister and submitted to STAT in Chicago, IL, for VOC analysis.

Table 1 in Attachment D provides a sampling summary.

ANALYTICAL RESULTS

During the additional SA activities, WESTON START collected two groundwater samples and 10 soil gas samples. **Appendix E** provides the laboratory analytical reports and the data validation reports for the samples. The results for each medium sampled are summarized as follows.

Grab Groundwater Sampling Analytical Results

The groundwater sampling results were compared to the following screening criteria:

- EPA Maximum Contaminant Levels (MCL) and EPA Regional Removal Management Levels (RML) – Tap water Hazard Quotient (HQ) 3.

Table 2 in Attachment D summarizes the groundwater sample results. **Figure 4 in Attachment A** presents the groundwater sample analytical results map. The following VOCs exceed the screening

Mr. Steve Faryan
EPA Region 5

-4-

Vogue Cleaners Site
June 9, 2014

criteria in sample VC-SB2-GW(12-14)-042214 collected from soil boring/temporary monitoring well location SB-2D:

- PCE at 1.1 milligrams per liter (mg/L) exceeded the EPA MCL and the EPA HQ3 RML for Tap Water.
- TCE at 0.0059 mg/L exceeded the EPA MCL.

Soil Gas Sampling Analytical Results

The soil gas sampling results were compared to EPA Vapor Intrusion Screening Level (VISL), Version 3.2, November 2013, Exterior Soil Gas Concentrations at Target Cancer Risk (TCR) 10^{-4} , Target Non-Cancer Risk (TNCR) HQ3 (*except TCE*), and TNCR HQ1 for TCE.

Table 3 in Attachment D summarizes the soil gas sample results. **Figure 5 in Attachment A** presents the soil gas sample analytical results that exceeded screening criteria. The following soil gas sample laboratory analytical results exceeded the EPA VISL screening criteria:

- Sample VC-SB1-SG(6.5-7)-042314, collected from soil boring/temporary monitoring well location SB-1:
 - Chloroform at 0.11 milligrams per cubic meter (mg/m³).
 - PCE at 2.8 mg/m³.
 - TCE at 0.38 mg/m³.
- Sample VC-SB2-SG(4-4.5)-042314, collected from soil boring/temporary monitoring well location SB-2S:
 - PCE at 1,400 mg/m³.
 - TCE at 0.086 mg/m³.
- Sample VC-SB3-SG(6.5-7)-042314, collected from soil boring/temporary monitoring well location SB-3:
 - PCE at 2 mg/m³.
 - TCE at 0.039 mg/m³.
- Sample VC-SB5-SG(5-6)-042414, collected from soil boring/temporary monitoring well location SB-5:
 - Chloroform at 0.12 mg/m³.

THREATS TO HUMAN HEALTH AND THE ENVIRONMENT

Factors to be considered in determining the appropriateness of a potential removal action at a Site are delineated in the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) at 40 Code of Federal Regulations (CFR) 300.415(b)(2). A summary of the factors applicable to this Site are presented as follows.

- **Actual or potential exposure of nearby human populations, animals, or the food chain to hazardous substances, pollutants, or contaminants.**

The Site is bordered to the north by Clarke Street, a veterinary clinic, and residential properties; to the east by residential properties; to the south by residential properties; and to the west by N Wauwatosa Avenue and residential properties. The Menomonee River is located approximately 1.3 miles south of the Site.

Based on the SA grab groundwater sample analytical results, TCE concentrations exceeded the EPA MCL; and PCE concentrations exceeded the EPA MCL and RML for tap water (HQ 3).

Based on the SA soil gas sample analytical results, TCE, PCE, and chloroform concentrations exceeded the EPA VISL for Exterior Soil Gas Concentrations at TCR 10^{-4} , TNCR HQ3 (*except TCE*), and TNCR HQ1 for TCE.

Based on the SA analytical results, the concentrations of Site-related contaminants in groundwater and soil gas may pose a risk to public health. Additional site assessment is necessary, including the sampling of residential structures, to determine scope and extent of off-site contaminants and the potential for threats to the public health or welfare of the United States or the environment.

- **High levels of hazardous substances, pollutants, or contaminants in groundwater largely at or near the surface that may migrate.**

Based on the SA groundwater and soil gas analytical results, it is evident that TCE and PCE contamination in groundwater is migrating into soil gas. Therefore, there is a potential that these contaminants could further migrate into nearby residential homes and present a hazard to human health.

- **The availability of other appropriate federal or state response mechanisms to respond to the release.**

The City of Wauwatosa requested EPA assistance in performing a removal assessment, which documents the need for federal involvement to address the potential for imminent and substantial threats to the public health or welfare of the United States or the environment posed by the Site.

Mr. Steve Faryan
EPA Region 5

-6-

Vogue Cleaners Site
June 9, 2014

- **Weather conditions that may cause hazardous substances, pollutants, or contaminants to migrate or be released.**

Wauwatosa receives an average yearly precipitation of 34.81 inches. Average temperatures range from 13 to 81 degrees Fahrenheit (°F). The Site surface is relatively flat, and the surface cover at the Site mainly consists of concrete.

As previously noted, SA analytical results indicate groundwater and soil gas contamination at the Site. Weather conditions, including precipitation, could increase the risk of migration of hazardous substances or pollutants from the Site.

SUMMARY AND CONCLUSIONS

From April 21 through 25, 2014, WESTON START conducted an SA at the Site under the direction of EPA On-Scene Coordinator Steve Faryan. During the SA, WESTON START collected two groundwater samples and 10 soil gas samples. All samples were analyzed for VOCs.

The groundwater samples contained TCE at concentrations exceeding the EPA MCL, and PCE at concentrations exceeding the EPA MCL and RML for tap water (HQ 3). The soil gas samples contained TCE, PCE, and chloroform at concentrations exceeding applicable EPA VISL screening criteria.

Based on SA analytical results, the concentrations of Site-related contaminants in groundwater and soil gas may pose a risk to the public health or welfare of the United States or the environment. Additional sampling is recommended, including the sampling of residential structures, to determine the scope and extent of off-site contamination and the potential for threats to the public health or welfare of the United States or the environment.

If you have any questions or require additional information, please contact me at (312) 424-3339.

Very truly yours,
Weston Solutions, INC.

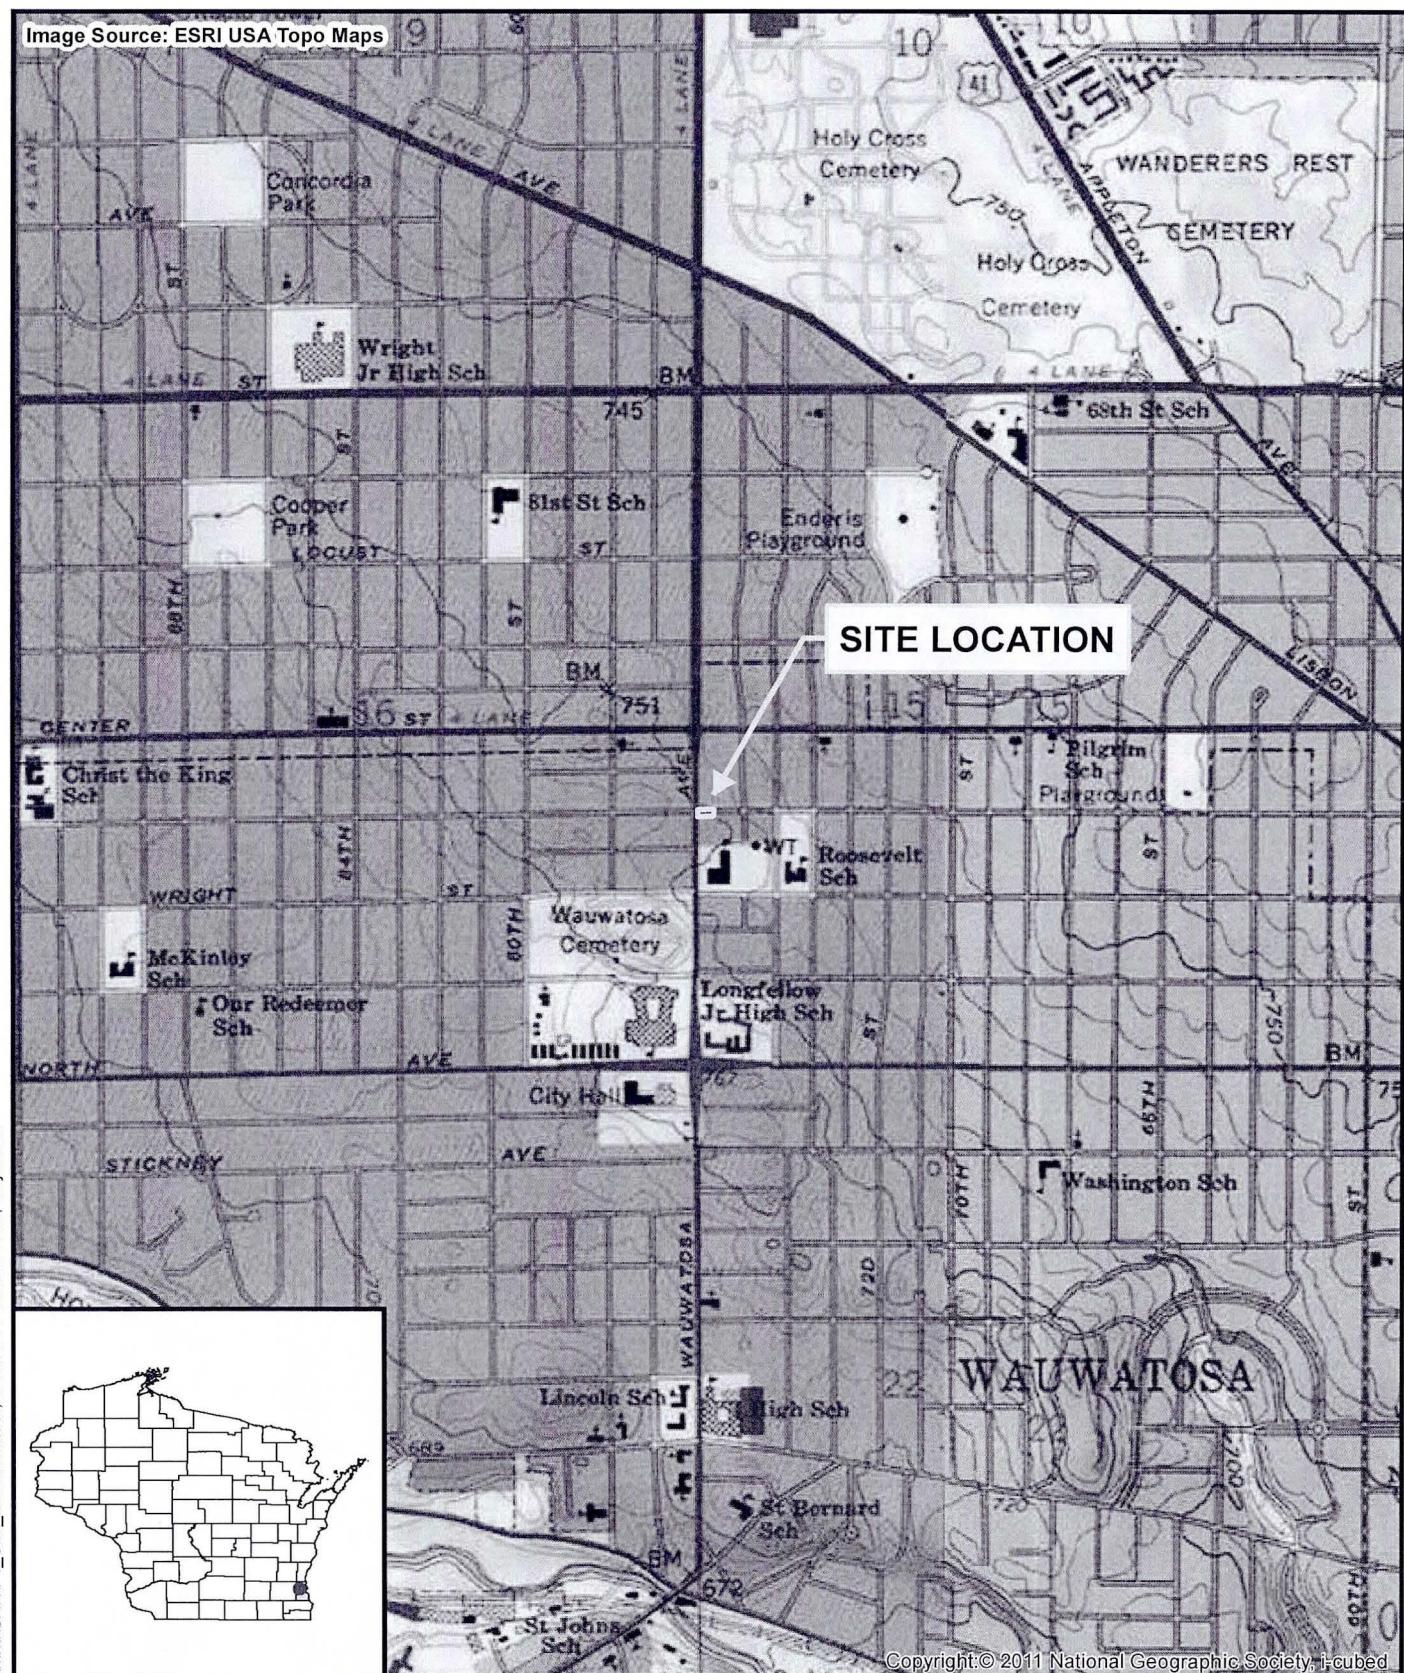

Lisa Graczyk
WESTON START Project Manager

DATA VALIDATION REPORTS

**VOGUE CLEANERS SITE
WAUWATOSA, WISCONSIN
DATA VALIDATION REPORT**

Date: May 23, 2014

Laboratory: STAT Analysis Corporation (STAT), Chicago, Illinois

Laboratory Project #: 14041186

Data Validation Performed By: Lisa Graczyk, Weston Solutions, Inc. (WESTON) Superfund Technical Assessment and Response Team (START)

Weston Analytical Work Order #/TDD #: 20405.016.001.1699.00/S05-0001-1112-005

This data validation report has been prepared by WESTON START under the START III Region V contract. This report documents the data validation for nine air samples, two groundwater samples, and one trip blank collected for the Vogue Cleaners Site that were analyzed for the following parameters and U.S. Environmental Protection Agency methods.

- Volatile Organic Compounds (VOC) by TO-15 (air)
- VOCs by SW-846 Method 8260B (water)

A level II data package was requested from STAT. The data validation was conducted in general accordance with the EPA "Contract Laboratory Program National Functional Guidance for Superfund Organic Methods Data Review" dated June 2008. The Attachment contains the results summary sheets with the hand-written qualifiers applied during data validation.

VOCs BY EPA METHOD TO-15

1. Samples

The following table summarizes the samples for which this data validation is being conducted.

Samples	Lab ID	Matrix	Date Collected	Date Analyzed
VC-SB2-SG (4-4.5)-042314	14041186-003	Air	4/23/2014	4/29/2014
VC-SB2-SG (10-10.5)-042314	14041186-004	Air	4/23/2014	4/30/2014
VC-SB3-SG (6.5-7)-042314	14041186-005	Air	4/23/2014	4/29/2014
VC-SB1-SG (6.5-7)-042314	14041186-006	Air	4/23/2014	4/29/2014
VC-SB5-SG (5-6)-042414	14041186-007	Air	4/24/2014	4/30/2014

Data Validation Report
Vogue Cleaners Site
STAT Analysis Corporation
Laboratory Project #: 14041186

2. Holding Times

The samples were analyzed within the required holding time limit of 30 days from sample collection.

3. Blanks

Method blanks were analyzed with the VOC analysis and were free of target compound contamination above the reporting limits. Some VOCs were detected in the method blanks below the reporting limits but above the method detection limits. These VOCs were not detected in the samples or were detected at a much higher concentration in the samples; therefore, no qualifications were warranted and the data usability was not affected.

4. Laboratory Control Sample (LCS) Results

The LCS and LCS duplicate (LCSD) recoveries and relative percent differences (RPD) were within laboratory QC limits except for as follows. Chloroethane was detected 1-2 percent below the QC limit. No qualification was applied for this minor discrepancy.

5. Overall Assessment

The VOC data are acceptable for use based on the information received.

VOCs by SW-846 METHOD 8260B

1. Samples

The following table summarizes the samples for which this data validation is being conducted.

Samples	Lab ID	Matrix	Date Collected	Date Analyzed
VC-SB2-GW(12-14)-042214	14041186-001	Water	4/22/2014	5/1/2014
VC-SB7-GW (4-5)-042414	14041186-002	Water	4/24/2014	5/2/2014

2. Holding Times

The samples were analyzed within the required holding time limit of 14 days from sample collection.

Data Validation Report
Vogue Cleaners Site
STAT Analysis Corporation
Laboratory Project #: 14041186

3. Blanks

Method blanks were analyzed with the VOC analyses and were free of VOCs above the reporting limits. Toluene was detected below the reporting limit in the method blank; however, it was not detected in the water samples. No qualifications were required.

4. Surrogate Results

The surrogate recovery results were within the laboratory-established QC limits.

5. LCS Results

The LCS and LCSD recoveries and RPDs were within laboratory QC limits.

6. Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Results

A site-specific MS and MSD were not analyzed with this work order. Therefore, matrix interferences could not be evaluated using the MS and MSD. No qualifications were applied.

7. Overall Assessment

The VOC data are acceptable for use based on the information received.

Analytical Report for STAT Workorder: 14041186 Revision 1

RE: 20405.012.001.2301.00, Vogue Cleaners, Wauwatosa

Dear Lisa Graczyk:

STAT Analysis received 12 samples for the referenced project on 4/26/2014 9:00:00 AM. The analytical results are presented in the following report.

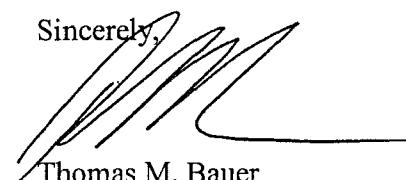

This report is revised to reflect changes made after the initial report was issued.

All analyses were performed in accordance with the requirements of 35 IAC part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Thomas M. Bauer
General Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

**VOGUE CLEANERS SITE
WAUWATOSA, WISCONSIN
DATA VALIDATION REPORT**

Date: May 23, 2014

Laboratory: STAT Analysis Corporation (STAT), Chicago, Illinois

Laboratory Project #: 14041287

Data Validation Performed By: Lisa Graczyk, Weston Solutions, Inc. (WESTON) Superfund Technical Assessment and Response Team (START)

Weston Analytical Work Order #/TDD #: 20405.016.001.1699.00/ S05-0001-1112-005

This data validation report has been prepared by WESTON START under the START III Region V contract. This report documents the data validation for one air sample collected for the Vogue Cleaners Site that was analyzed for the following parameters and U.S. Environmental Protection Agency methods.

- Volatile Organic Compounds (VOC) by TO-15

A level II data package was requested from STAT. The data validation was conducted in general accordance with the EPA "Contract Laboratory Program National Functional Guidance for Superfund Organic Methods Data Review" dated June 2008. The Attachment contains the results summary sheets with the hand-written qualifiers applied during data validation.

VOCs BY EPA METHOD TO-15

1. Samples

The following table summarizes the samples for which this data validation is being conducted.

Samples	Lab ID	Matrix	Date Collected	Date Analyzed
VC-SB10 (2-4) -042814	14041287-001	Air	4/28/2014	4/29/2014

2. Holding Times

The samples were analyzed within the required holding time limit of 30 days from sample collection.

3. Blanks

A method blank was analyzed with the VOC analysis and was free of target compound contamination above the reporting limits. Methylene chloride was detected in the method blank below the reporting limit but above the method detection limit. Methylene chloride was not

Data Validation Report
Vogue Cleaners Site
STAT Analysis Corporation
Laboratory Project #: 14041287

detected in the sample; therefore, no qualification was warranted and the data usability was not affected.

4. Laboratory Control Sample (LCS) Results

The LCS and LCS duplicate (LCSD) recoveries and relative percent differences (RPD) were within laboratory QC limits.

5. Overall Assessment

The VOC data are acceptable for use based on the information received.

Analytical Report for STAT Workorder: 14041287 Revision 1

RE: 20405.016.001.2301.77, Vogue Cleaners, Wauwatosa

Dear Lisa Graczyk:

STAT Analysis received 1 sample for the referenced project on 4/29/2014 2:50:00 PM. The analytical results are presented in the following report.

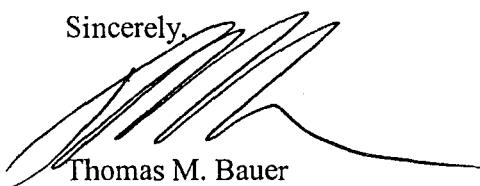

This report is revised to reflect changes made after the initial report was issued.

All analyses were performed in accordance with the requirements of 35 IAC part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Thomas M. Bauer
General Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Qualifiers: ND - Not Detected at the Reporting Limit
 J - Analyte detected below quantitation limits
 * - Non Accredited Parameter

S - Spike Recovery outside accepted recovery limits
 R - RPD outside accepted recovery limits
 H/HT - Holding Time Exceeded

B - Analyte detected in the associated Method Blank
 E - Value above quantitation range

CLIENT: Weston Solutions
Work Order: 14041287
Project: 20405.016.001.2301.77, Vogue Cleaners, Wauwatosa

ANALYTICAL QC SUMMARY REPORT

BatchID: R98520

Sample ID: LCSD043014-5 5.0	SampType: LCSD	TestCode: TO_15MG+	Units: mg/m³	Prep Date:				Run ID: VOA-5_140430A			
Client ID: ZZZZZ	Batch ID: R98520	TestNo: TO-15		Analysis Date: 4/30/2014				SeqNo: 2663689
