Subject: Pizza Place Restaraunt – Letter Report

Dear Ms. Stoltz,

Enclosed is the report for the Pizza Place Restaraunt site located in Turtle Lake, Wisconsin. **This completes the Public Bidding Deferred workscope approved on March 6, 2018.**

Drilling Project Workscope

On May 30-31, 2018, PSI of Chippewa Falls, WI installed two piezometer wells (PZ-2, and PZ-3) under supervision and direction of METCO personnel. During the drilling project, nine soil samples were collected from the soil borings for field description and PID analysis. Soil sampling was terminated at 68 feet below ground surface (bgs) in soil boring PZ-3, due to sand heave in the auger. Piezometer PZ-2 and Piezometer PZ-3 were both set to 80 feet bgs. Upon completion, piezometer PZ-2 was properly developed.

Groundwater Monitoring Workscope

On June 13, 2018 METCO personnel collected groundwater samples from eight monitoring wells/piezometers (MW-1, MW-2, MW-3, MW-4, PZ-2, PZ-3, PZ-13, and PZ-14) for Dissolved Lead analysis. Samples from six monitoring/piezometer wells (MW-1, MW-2, MW-3, MW-4 PZ-13 and PZ-14) were also analyzed for PVOOC and Naphthalene. Samples from two piezometer wells (PZ-2 and PZ-3) were also analyzed for VOC. Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled monitoring wells. Water level measurements were also collected from four additional monitoring wells (MW-7, PZ-6, PZ-7, and PZ-11). During the groundwater sampling event, piezometer well PZ-3 was properly developed, and piezometer wells (PZ-2 and PZ-3) were surveyed to feet mean sea level.

On September 5, 2018, 2018 METCO personnel collected groundwater samples from eight monitoring wells/piezometers (MW-1, MW-2, MW-3, MW-4, PZ-2, PZ-3, PZ-13, and PZ-14) for Dissolved Lead, PVOOC, and Naphthalene analysis. Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled monitoring wells. Water level measurements were also collected from four additional monitoring wells (MW-7, PZ-6, PZ-7, and PZ-11).

Investigative waste disposal

On July 12, 2018 DKS Transport Services, LLC of Menomonie, Wisconsin picked up and disposed of eleven drums of soil cuttings, and one drum of water at the Advanced Disposal – Seven Mile Creek Landfill in Eau Claire, Wisconsin.

Discussion of Groundwater Results

Monitoring well MW-1: Currently shows NR140 Enforcement Standard (ES) exceedances for Benzene (2,840 ppb), Ethylbenzene (1750 ppb), Naphthalene (360 ppb), Toluene (10,000 ppb), Trimethylbenzenes (2,330 ppb), and Xylene (8,070 ppb). The contaminant concentrations appear to be stable, except for Toluene and TMB, which have increased.

Monitoring well MW-2: Currently shows NR140 ES exceedances for Dissolved Lead (25.9 ppb), Benzene (720 ppb), Ethylbenzene (1,920 ppb), Naphthalene (550 ppb), Toluene (6,700 ppb), Trimethylbenzenes (2,530 ppb), and Xylene (9,030 ppb). The contaminant concentrations appear to be stable to decreasing.

Monitoring well MW-3: Currently shows no detects for PVOOC and Naphthalene.

Monitoring well MW-4: Currently shows no detects for PVOOC and Naphthalene.

Piezometer well PZ-2: Currently shows NR140 ES exceedances for Benzene (3,400 ppb) and MTBE (740 ppb), as well as NR140 Preventative Action Limit (PAL) exceedances for Ethylbenzene (370 ppb) and Naphthalene (96 ppb).

Piezometer well PZ-3: Currently shows no detects for PVOOC and Naphthalene.

Monitoring well PZ-13: Currently shows no detects for PVOOC and Naphthalene.

Monitoring well PZ-14: Currently shows NR140 ES exceedances for Benzene (5,700 ppb), Ethylbenzene (3,500 ppb), Naphthalene (870 ppb), Toluene (8,700 ppb) Trimethylbenzenes (4,220 ppb), and Xylene (17,500 ppb). The contaminant concentrations appear to be increasing.

Conclusions/Recommendations

Based on the groundwater sampling results, it is the recommendation of METCO that the site be reviewed for the possibility of “closure” for the following reasons: 1) The extent and degree is defined to reasonable extent. 2) Direct contact exceedances can

be addressed via cap maintenance plan (concrete/asphalt). 3) Contamination trends in groundwater appear to be at least stable with the exception of Toluene and TMB's in monitoring well MW-1. 4) Risk of vapor intrusion appears unlikely due to no shallow soil contamination near the on-site building and that groundwater is greater than 45 feet bgs. 5) The nearest municipal water supply well is located approximately 850 feet to the southeast (upgradient) of the subject property, and there are no known potable wells located in the area.

A Detailed Site Map, Groundwater Flow Maps, Groundwater Isoconcentration Map, Data Tables, Soil Boring Logs, Well Construction Forms, Well Development Forms, Investigative Waste Disposal Documents, and Laboratory Documents have been attached.

If you have any questions or comments, please feel free to call (608-781-8879) or email at jasonp@metcohq.com.

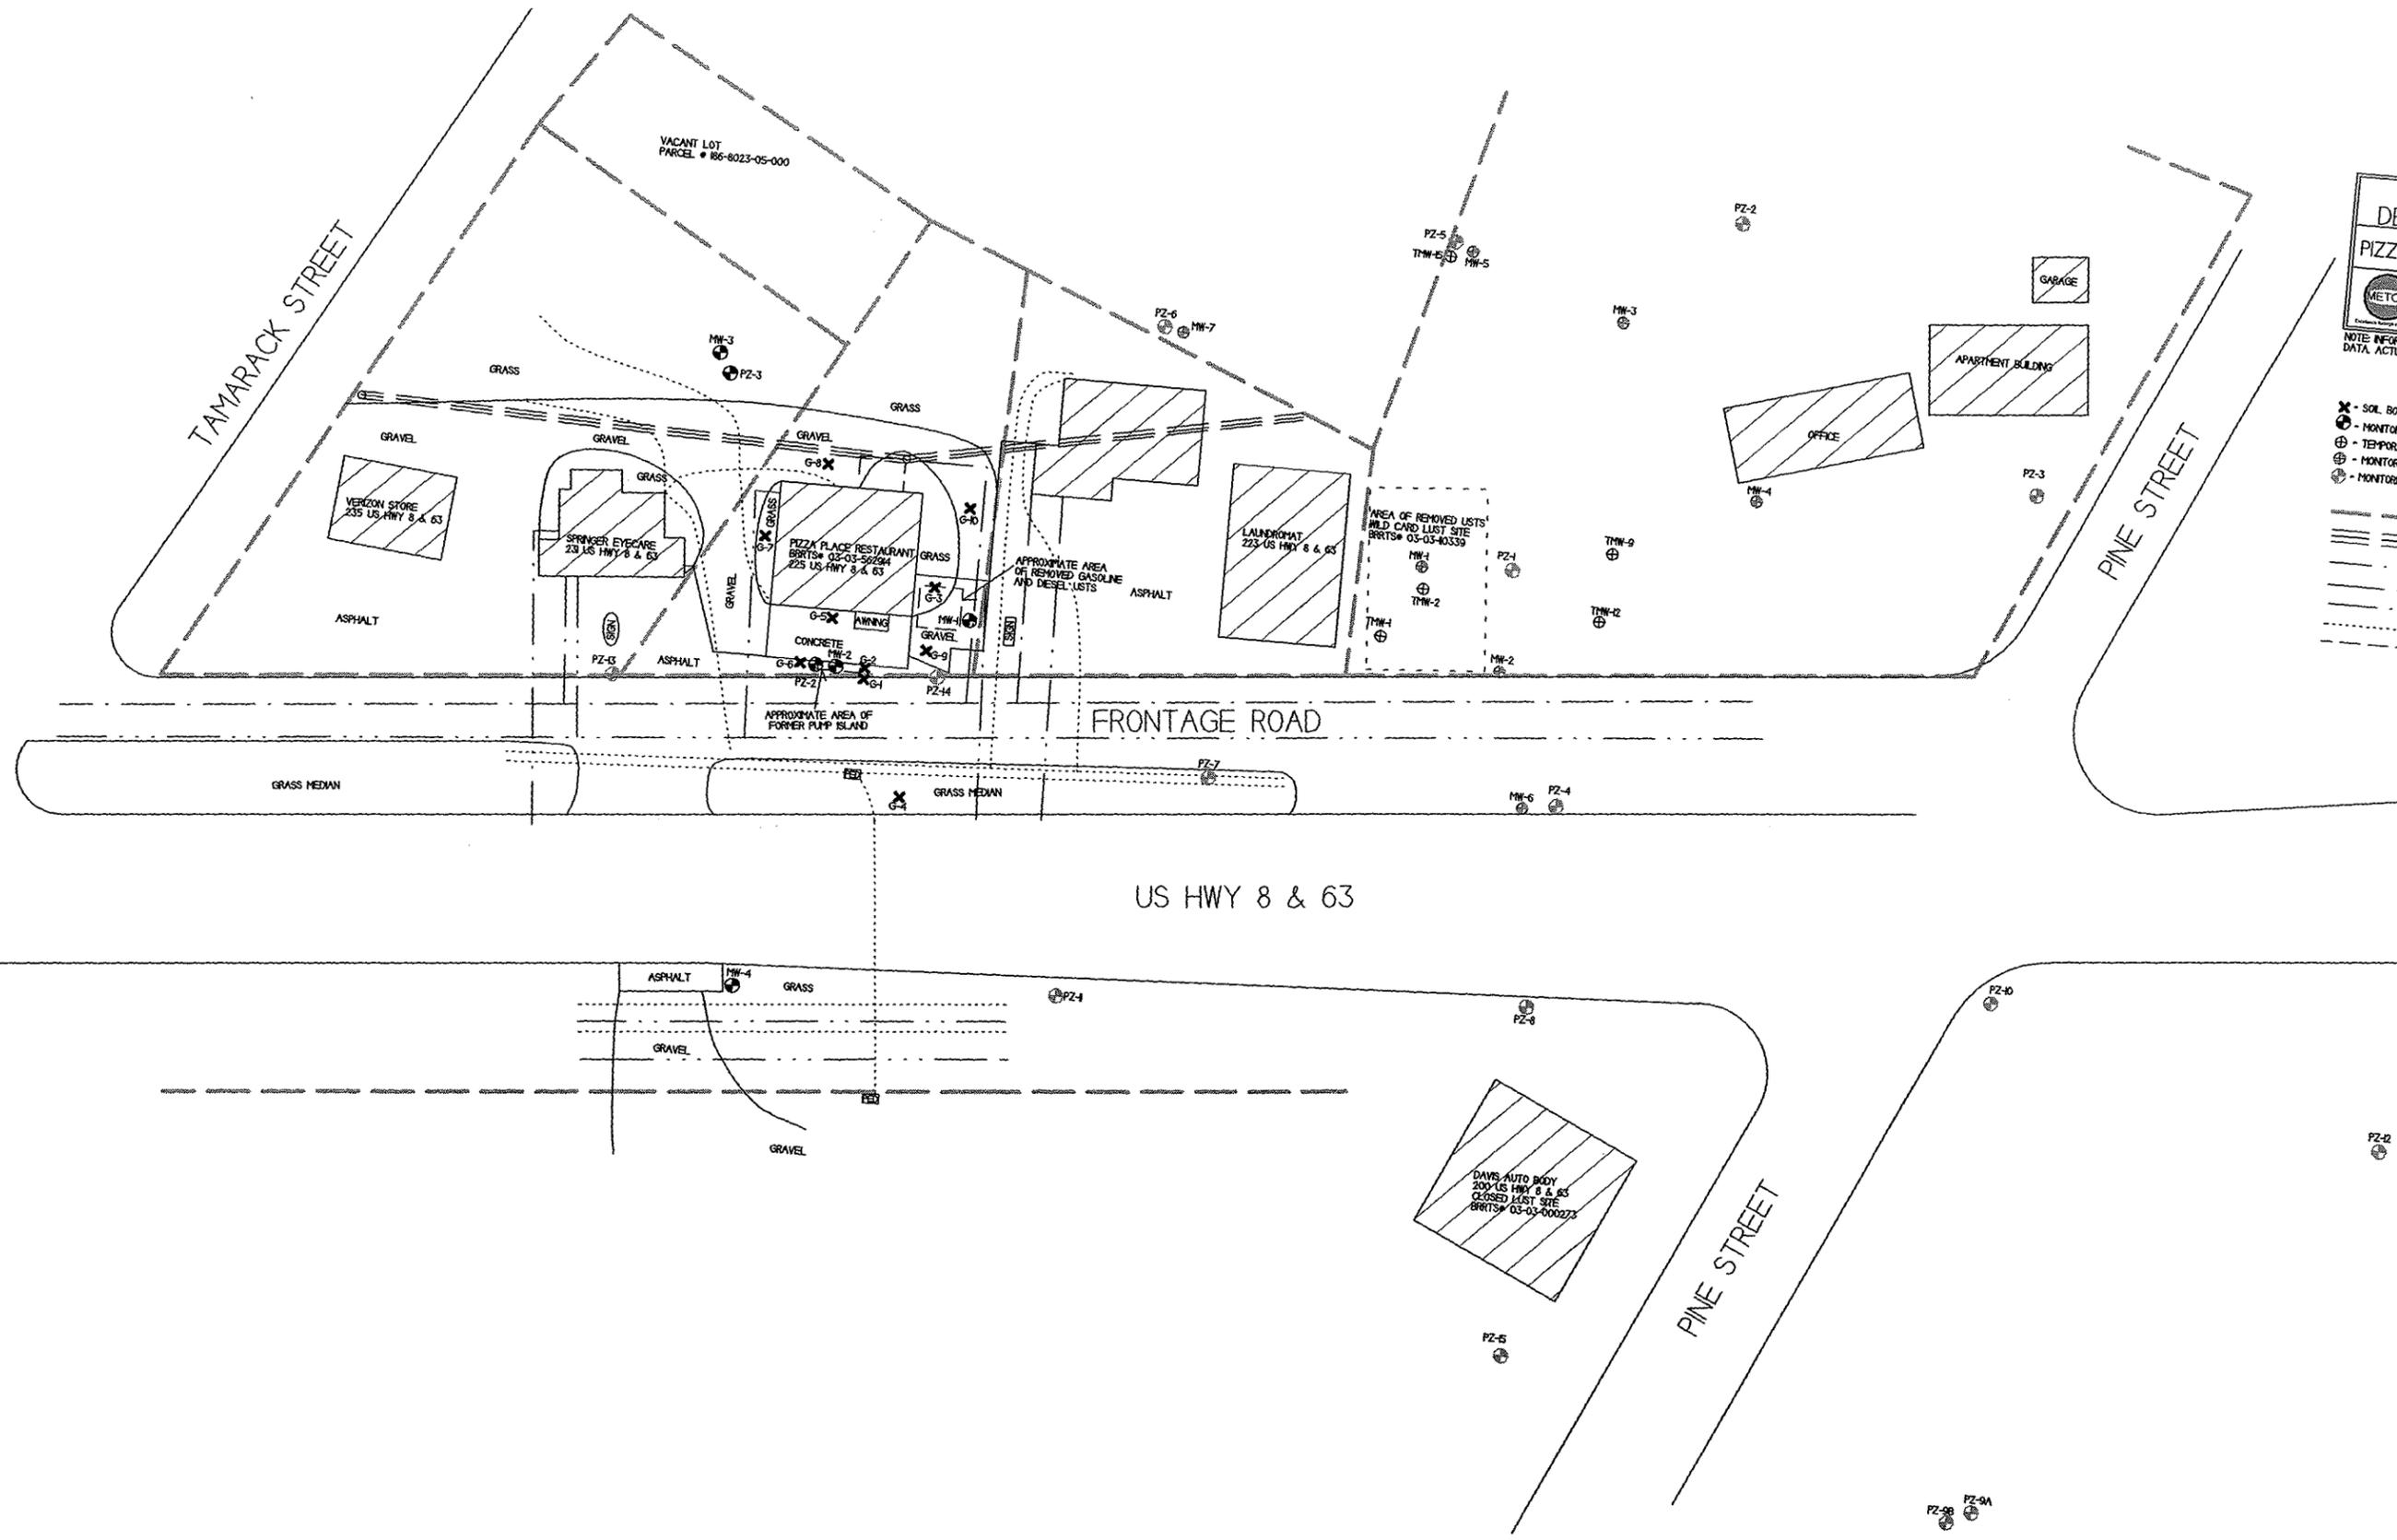

Sincerely,

A handwritten signature in black ink that reads "Jason T. Powell". The signature is written in a cursive style with a long horizontal stroke at the beginning.

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code **Comment**

1 Laboratory QC within limits.

CWT denotes sub contract lab - Certification #445126660

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.
