Flag Status: Flagged

Good morning. Below is the statement.

The subject property was first developed in approximately the 1940s after US Highway 8/63 was constructed in this area. The building was originally constructed as a gas station and service garage. Douglas Potvin operated a bait shop at the property and continued retail fuel sales at the property until the late 1980s. On April 12, 1988, a 1,000-gallon diesel UST was removed from the subject property. On April 17, 1989, two 1,000-gallon gasoline (leaded and unleaded) USTs were removed from the subject property. After Douglas Potvin sold the property, it operated as a gift shop for a period of time and has operated as a pizza restaurant ever since. The only known source of contaminants was the former petroleum tanks. There is no known onsite use of materials containing any compounds on the WDNRs emerging contaminants list including perfluoroalkyl and polyfluoroalkyl substances or 1,4-Dioxane.

Thanks, Ron

Hello Ron,

I wanted to give you an update on the above mentioned closure request. Northern Region will meet on March 4, 2021 to review for closure, HOWEVER we cannot code the request until receiving the information required for the PFAS scoping. This scoping is required of all projects starting September 2020, and was notified to all open site parties in the recent PFAS letters that went out from the department. If you can get me a PFAS scoping statement regarding the site before the closure review date, I can get it registered as having completed that requirement. Thank you!

"Per Wis Admin. Code § NR 716.07 and Wis. Admin. Code § NR 716.09, site investigation scoping and work plans should include and evaluation of potential PFAS compounds and other applicable contaminants that were historically or are presently produced, used, handled, or stored at the site. The evaluation should include any available information on whether any products containing PFAS were used in any process services, the duration of PFAS-containing product use, the type of PFAS contained in the product, and any areas of the site where PFAS-containing products may have been used, stored, managed, or discarded. Site investigation work plans should also include a sampling and analysis strategy to used during field investigation work plans that considers all information in the evaluation conducted under Wis. Admin. Code § NR 716.07."

Sincerely, Barb

We are committed to service excellence.

Visit our survey at <http://dnr.wi.gov/customersurvey> to evaluate how I did.
