**Subject:** WRR Environmental Services Co., Inc - Spill Report  
**Attachments:** Spill Notification for WRR Environmental Services Co - SDA 2B - 01 22 2015.docx

On the morning of January 22, 2015, WRR had a release of 4 gallons of a specially denatured ethanol to the blacktop at the facility. Phone notification to the Spill Hot Line was done at the time of the spill.

This email is being sent in response to Condition 86 of WRR's current FPOR. The spill report is attached.

Please ring me or email me with any questions or need for additional information.

Regards,

BECKY ANDERSON

Spill Notification for WRR Environmental Services Co., Inc.  
EPA ID# WID990829475  
FID# 618026530

RECEIVED  
FEB 03 2015

BY: .....

Per Condition 86 of WRR Environmental Services' current Feasibility and Plan of Operations Report (FPOR), WRR is making the following spill report to the Department's designated Hazardous Waste Inspector assigned to WRR, to the Department's designated Hazardous Waste plan review staff person assigned to WRR and to the Department's designated Spills Coordinator.

This notification, required by Condition 86 of the WRR FPOR and NR 706.05(1), contains the following information to the extent practicable or applicable:

1. Name, address, and telephone number of the person reporting the discharge.

Becky Anderson – Director of Compliance  
WRR Environmental Services Co., Inc.  
5200 Ryder Road  
Eau Claire WI 54701

2. Name, address, and telephone number of the discharger, or owner and operator of the UST system and any other potentially responsible persons.

WRR Environmental Services Co., Inc.  
5200 Ryder Road  
Eau Claire WI 54701

3. Date, time, and duration of the discharge.

January 22, 2015 @ ~ 11am for 10 minutes

Location of the discharge including street address, county, town, city or village

WRR Environmental Services Co., Inc.  
5200 Ryder Road  
Eau Claire WI 54701

Town of Washington

4. Identity, physical state, and quantity of the material discharged.

4 gallons of Specially Denatured Ethanol (SDA) spilled on the blacktop. There was a small amount (<0.1 gallons) of a nonvolatile oil in the SDA.

5. Physical, chemical, hazardous, and toxicological characteristics of the substance.

The material that spilled is hazardous due to flammability with a flash point of less than 72 F.

6. Cause of the discharge.

During distillation, the valve to the receiver was left closed, forcing liquid up through the system's vent pipe.

7. Immediate actions being taken and the name of the contractor or other person performing the action.

The system was shut down immediately to prevent further "blow over". The spilled material was cleaned up with clay based absorbent. The absorbent was swept up into an open top drum and labeled as WRR generated waste.

On-site WRR personnel cleaned up the spill with a shovel.

8. Source, speed of movement, and destination or probable destination of the discharged hazardous substance.

The spill area covered 5 ft<sup>2</sup> at the time of clean up. The spill didn't impact unpaved ground or the WRR stormwater collection system.

9. Actual or potential impacts to human health or the environment, including actual or potential impacts to drinking water supplies.

No drinking water supplies were impacted by the spill. Air emissions from the spill are calculated to be 0.09 lbs of Ethanol. The vapor pressure and volatility of the oil was very low; emissions are negligible.

10. Weather conditions existing at the scene, including presence of precipitation and wind direction and velocity.

The outside temperature was 30 F with a 2 mph wind coming from the west. There was no precipitation falling at the time of the spill.

11. Other agencies on-scene during the discharge incident.

No agencies were on-site during the discharge or clean-up.
