Subject: Phase 2.5 Investigation
USH 45, Illinois State Line to STH 50, Bristol, Kenosha County, Wisconsin
WisDOT Project ID #3200-02-03
TRC Project #230448.0000.0000

Dear Andy:

The attached report documents the Phase 2.5 investigation findings for the Bristol Garage and Bristol Motors sites along USH 45 in Bristol, Wisconsin. Two (2) copies have been provided for your use.

Please contact me with questions. I can be reached at 262-901-2126 or bbergmann@trcsolutions.com.

Sincerely,

TRC Environmental Corporation

Bryan J. Bergmann, P.G.
Project Manager

Executive Summary

The WisDOT is planning to reconstruct USH 45 from the Illinois state line to STH 50 in Kenosha County. In January 2015, TRC Environmental Corporation (TRC) was retained by the WisDOT to conduct a Phase 2.5 Investigation in order to define the extent of soil impacts at the Bristol Garage site, and to determine if contaminated soil might be encountered during construction near the Bristol Motors site.

TRC's Phase 2.5 Investigation indicated the following:

- Petroleum-contaminated soil exceeding WDNR standards is present from just below the existing ground surface to a depth of approximately 10 feet bgs in the vicinity of the former tank cavity (GP-2 and GP-8), near the southwest corner of the Bristol Garage site.
- The general extent of soil impacts in the vicinity of the former tank cavity near the southwest corner of the Bristol Garage site has been defined.
- Soil contamination was not identified near the northwest corner of the Bristol Motors site.

Special provisions should be included in the construction documents advising the contractor of these findings, and the requirement to manage contaminated soil removed by the project.

An excavation management plan should be prepared and submitted to the WDNR for their review and concurrence. The WisDOT's environmental consultant should be present during excavations in the area of known contamination during construction to field screen and document the excavation activities.

Since WisDOT is the responsible party for the Bristol Garage site, TRC recommends that the petroleum-impacted soil in the vicinity of the former tank cavity near the southwest corner of the Bristol Garage site be excavated (hot spot removal) prior to or during the reconstruction of USH 45. The impacted soil will require landfill disposal (bioremediation). Confirmation soil samples are to be collected from the sidewalls and floor of the excavation for laboratory analysis. After excavation of the impacted soil, a formal site closure request to the WDNR can be made.

Section 1
Background

The WisDOT is planning to reconstruct USH 45 from the Illinois state line to STH 50 in Kenosha County. Figure 1 show the project location.

In October 2012, Himalayan Consultants LLC (Himalayan) completed the Phase 1 for the project.

Prior to reconstruction, the WisDOT plans to acquire the Bristol Garage property located in the northeast quadrant of USH 45 (aka 200th Ave.) and 84th Street (property address is 8335 200th Avenue). The west side of the property (closest to USH 45) is currently occupied by a building used for automotive repairs. The existing auto repair building will be demolished, and a storm water retention pond will be constructed on the property.

In May 2013, TRC completed a Phase 3 investigation for the Bristol Garage site located at 8335 200th Avenue. The Phase 3 consisted of seven soil probes (GP-1 through GP-7). Temporary wells were installed in borings GP-3 and GP-4. The results of the Phase 3 Investigation revealed petroleum-contaminated soil in GP-2, which was located in the area of the former USTs. GRO, benzene, naphthalene, and total arsenic concentrations exceeded the NR 720 RCLs. Groundwater results revealed low concentrations of benzene and ethylbenzene in GP-4. However, the concentrations were below the NR 140 PALs. In addition, arsenic concentrations in GP-4 were detected slightly above the NR 140 PAL but below the NR 140 ES. Due to the soil and groundwater contamination discovered during the Phase 3 investigation, the WDNR was notified of the new release. The WDNR BRRTS No. for the Bristol Garage site is 02-30-563385. USTs formerly used at the Bristol Garage site included one 550-gallon leaded gasoline UST and one 300-gallon unleaded gasoline UST. WDNR BRRTS and UST information and results of the Phase 3 investigation for the Bristol Garage site are provided in Appendix A.

In January 2015, TRC was retained by the WisDOT to conduct a Phase 2.5 Investigation in order to define the extent of soil impacts at the Bristol Garage site, and to determine if contaminated soil might be encountered during construction near the Bristol Motors site. The Bristol Motors site is a closed LUST site at 8481 200th Ave. (USH 45) (WDNR BRRTS No. 03-30-002527). USTs formerly used at the Bristol Motors site included one 1,000-gallon and one 550-gallon unleaded gasoline USTs, and one 1,000-gallon leaded gasoline UST. WDNR BRRTS and UST information for the Bristol Motors site is provided in Appendix A.

Section 2
Sampling Activities

TRC performed the Phase 2.5 Investigation field activities on February 9, 2015, and April 7, 2015. The field work was planned to be completed on February 9, 2015. However, due to snow piles along USH 45, the work was completed in April 2015 after the snow had melt.

On February 9, 2015, five soil probe borings (GP-8 through GP-12) were advanced near the Bristol Garage and the Bristol Motors sites. Soil probes GP-8, GP-9, and GP-10 were advanced near the southwest corner of the Bristol Garage site. Soil probes GP-11 and GP-12 were advanced near the northwest corner of the Bristol Motors site. Groundwater was not encountered in soil probes GP-8 through GP-12. Figure 2 shows the soil probe locations.

On April 7, 2015, three soil probe borings (GP-13 through GP-15) were advanced near the Bristol Garage Site. Groundwater was not encountered in soil probes GP-13 through GP-15. Figure 2 shows the soil probe locations.

During soil boring activities, soil was continuously sampled, classified, and field-screened using a PID. The soil types, field observations, quantities, and the types of samples collected from each boring are summarized below.

Each soil boring was advanced to its proposed terminal depth of 10 feet. In general, the soil profile consisted of approximately 1 to 2.5 feet of fill (sand and gravel) underlain by native silt and clay. Groundwater was not observed in any of the soil borings. Upon completion, each borehole was abandoned with bentonite chips. Soil boring logs and abandonment forms are provided in Appendix B.

Two soil samples from each boring were submitted for laboratory analysis of DRO, GRO/PVOCs plus naphthalene, and lead or RCRA metals.

Photographs taken during fieldwork activities are included as Appendix C.

Section 3
Soil Sampling Results and Evaluation

Soil sample laboratory analytical results, including results from the Phase 3 investigation completed at the Bristol Garage site in 2013, are summarized in Table 1. The Phase 2.5 laboratory analytical report, which includes the analytical methods used, is included in Appendix D.

- During the Phase 3 investigation in 2013, several VOC concentrations exceeded the respective NR 720 soil standards in GP-2 (6'-8'). The GRO, DRO, and arsenic concentrations in GP-2 (6'-8') were 250 mg/kg, 10 mg/kg and 11 mg/kg, respectively. The WDNR does not have soil standards for GRO and DRO. The arsenic concentration exceeded the background threshold value of 8.0 mg/kg.
- Elevated PID readings (ranging from 22.1 to 462.6 Instrument Units) were observed in samples from GP-8. Black staining and petroleum odors were noted in the 2'-4' bgs interval. The GRO concentration in GP-8 (2'-4') was 330 mg/kg. 1,2,4-trimethylbenzene was detected in GP-8 (2'-4'). However, the result was flagged by the laboratory because the result was an estimated concentration. The GRO concentration in GP-8 (8'-10') was 4.6 mg/kg.
- In GP-14 (2'-4'), the DRO concentration was 30 mg/kg and the lead concentration was 110 mg/kg. Because the lead result was greater than 100 mg/kg, the sample was also analyzed by the toxicity characteristic leaching procedure (TCLP) for landfill disposal purposes. The TCLP lead result was 0.037 mg/l, which was less than the landfill acceptance criterion of 5.0 mg/l.
- The naphthalene concentrations in GP-13 (8'-10') and GP-15 (8'-10') were 130 µg/kg and 120 µg/kg, respectively. Both results were flagged by the laboratory as estimated concentrations, and the results were less than the detection limit in most of the other samples analyzed for this Phase 2.5 Investigation.

TRC performed calculations using the soil sample lab data to determine if the concentrations of detected compounds exceed the calculated industrial and non-industrial cumulative hazard indices, and/or the cumulative cancer risk (See Appendix E for calculations). All results were below the respective RCLs, calculated cumulative hazard indices, and/or the cumulative cancer risk with the exception of sample GP-2 (6'-8') where the result exceeded the calculated direct contact non-industrial cancer risk (cumulative).

Section 4
Findings, Conclusions, and Recommendations

TRC's Phase 2.5 Investigation indicated the following:

- Petroleum-contaminated soil exceeding WDNR standards is present from just below the existing ground surface to a depth of approximately 10 feet bgs in the vicinity of the former tank cavity (GP-2 and GP-8) near the southwest corner of the Bristol Garage site.
- The general extent of soil impacts in the vicinity of the former tank cavity near the southwest corner of the Bristol Garage site has been defined.
- Soil contamination was not identified near the northwest corner of the Bristol Motors site.

Special provisions should be included in the construction documents advising the contractor of these findings, and the requirement to manage contaminated soil removed by the project. Draft special provisions are included in Appendix F.

An excavation management plan should be prepared and submitted to the WDNR for their review and concurrence. The WisDOT's environmental consultant should be present during excavations in the area of known contamination during construction to field screen and document the excavation activities.

Since WisDOT is the responsible party for the Bristol Garage site, TRC recommends that the petroleum-impacted soil in the vicinity of the former tank cavity near the southwest corner of the Bristol Garage site be excavated (hot spot removal) prior to or during the reconstruction of USH 45. The impacted soil will require landfill disposal (bioremediation). Confirmation soil samples are to be collected from the sidewalls and floor of the excavation for laboratory analysis. After excavation of the impacted soil, a formal site closure request to the WDNR can be made.

Notes:
1. PID = Photoionization Detector
2. GRO = Gasoline Range Organics analyzed using the Wisconsin Modified Method
3. DRO = Diesel Range Organics analyzed using Wisconsin Modified Method
4. VOCs = Volatile Organic Compounds analyzed using EPA Method 8260B
5. mg/kg = milligrams per kilogram (ppm)
6. µg/kg = micrograms per kilogram (ppb)
7. Total metals analyzed using EPA Method 6010B, except for mercury which was analyzed using EPA Method 7471A
8. TCLP Metals = Toxicity Characteristic Leaching Procedure for Metals analyzed using EPA Method 6010B
9. ND = Not Detected
10. - - = not analyzed
11. Samples were collected by TRC and analyzed by Test America (WDNR Cert. #998020430)
    PVOCs listed above are the NR720 generic RCLs for the protection of groundwater. RCLs for metals are the NR 720 Table 2 non-industrial values.
12. - = Standard not established.
13. J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit
14. V = Serial Dilution exceeds the control limits
15. B = Compound was found in the blank and sample
16. F1 = Matrix spike and/or matrix spike dilution recovery exceeds the control limits.
17. ^ = ICV, CCV, ICB, CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
18. Results in **BOLD** indicate a detection (or potential detection if J-flagged) above the Non-Industrial or Industrial NR 720 RCL plus the background threshold value
19. Results in *Italic*s indicate a detection (or potential detection if J-flagged) above the Groundwater Pathway NR 720 RCL plus the background threshold value.

Footnotes:
(1) Only analytes that were detected in at least one sample are shown in the table.
(2) Value is the generic RCL for the groundwater pathway.
(3) Value is the generic RCL for exposure by direct contact.
(4) Calculated from http://epa-prgs.ornl.gov/cgi-bin/chemicals/csl_search using default exposure assumptions listed in NR 720.12(3)
(5) Background threshold value (BTV) was taken from the Wisconsin DNR's NR 720 RCL spreadsheet
(6) GW Pathway RCL is for combined 1,2,4- and 1,3,5- Trimethylbenzene
(7) Calculated using WDNR RCL Spreadsheet Calculator (January 2015 Update)

Notes:
1. PID = Photoionization Detector
2. GRO = Gasoline Range Organics analyzed using the Wisconsin Modified Method
3. DRO = Diesel Range Organics analyzed using Wisconsin Modified Method
4. VOCs = Volatile Organic Compounds analyzed using EPA Method 8260B
5. mg/kg = milligrams per kilogram (ppm)
6. µg/kg = micrograms per kilogram (ppb)
7. Total metals analyzed using EPA Method 6010B, except for mercury which was analyzed using EPA Method 7471A
8. TCLP Metals = Toxicity Characteristic Leaching Procedure for Metals analyzed using EPA Method 6010B
9. ND = Not Detected
10. - - = not analyzed
11. Samples were collected by TRC and analyzed by Test America (WDNR Cert. #998020430)
    PVOCs listed above are the NR720 generic RCLs for the protection of groundwater. RCLs for metals are the NR 720 Table 2 non-industrial values.
12. - = Standard not established.
13. J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit
14. V = Serial Dilution exceeds the control limits
15. B = Compound was found in the blank and sample
16. F1 = Matrix spike and/or matrix spike dilution recovery exceeds the control limits.
17. ^ = ICV, CCV, ICB, CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
18. Results in **BOLD** indicate a detection (or potential detection if J-flagged) above the Non-Industrial or Industrial NR 720 RCL plus the background threshold value
19. Results in *Italic*s indicate a detection (or potential detection if J-flagged) above the Groundwater Pathway NR 720 RCL plus the background threshold value.

Footnotes:
(1) Only analytes that were detected in at least one sample are shown in the table.
(2) Value is the generic RCL for the groundwater pathway.
(3) Value is the generic RCL for exposure by direct contact.
(4) Calculated from http://epa-prgs.ornl.gov/cgi-bin/chemicals/csl_search using default exposure assumptions listed in NR 720.12(3)
(5) Background threshold value (BTV) was taken from the Wisconsin DNR's NR 720 RCL spreadsheet
(6) GW Pathway RCL is for combined 1,2,4- and 1,3,5- Trimethylbenzene
(7) Calculated using WDNR RCL Spreadsheet Calculator (January 2015 Update)

Barium	-	--	--	54	--	--	--	--	--	--	--	--	--	--	--	--	2,000 mg/kg
Cadmium	8	--	--	0.19 J	--	--	--	--	--	--	--	--	--	--	--	--	20 mg/kg
Chromium	16,000 (tri)	--	--	21	--	--	--	--	--	--	--	--	--	--	--	--	100 mg/kg
Lead	50	14 B	13 B	10 B	8.9 B	7.3 B	15 B	19 B	11 B	12 B	10 B	14 B	8.7 B	23 B	9.4 B	--	100 mg/kg
Mercury	-	--	--	0.018	--	--	--	--	--	--	--	--	--	--	--	--	4 mg/kg
PCBs (µg/kg)		--	--	<52.6	--	--	--	--	--	--	--	--	--	--	--	--	

Notes:

1. PID = Photoionization Detector
2. GRO = Gasoline Range Organics analyzed using the Wisconsin Modified Method
3. mg/kg = milligrams per kilogram (ppm)
4. DRO = Diesel Range Organics analyzed using Wisconsin Modified Method
5. PVOCs = Petroleum Volatile Organic Compounds analyzed using EPA Method 8021
6. µg/kg = micrograms per kilogram (ppb)
7. VOCs = Volatile Organic Compounds analyzed using EPA Method 8260B
8. PCBs - Polychlorinated Biphenyls analyzed using EPA Method 8082
9. Total metals analyzed using EPA Method 6010
10. - - = not analyzed
11. Samples were collected by TRC and analyzed by Test America (WDNR Cert. #998020430)
12. NR 720 RCL = Residual Contaminant Level from NR 720, WAC. RCL listed for DRO and GRO are the more stringent of the two NR 720.09 values. RCLs for the PVOCs listed above are the NR720 generic RCLs for the protection of groundwater. RCLs for metals are the NR 720 Table 2 non-industrial values
13. - = Standard not established.
14. J = Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.
15. B = Compound was found in the blank and sample
16. Results in **BOLD** indicate an exceedence (or potential exceedence if J- or B-flagged) of the NR 720 RCL

Created by: B. Bergmann 5/9/13
Checked by: T. Stapel 5/9/13

Notes:

Created by: B. Bergmann 5/9/13

Checked by: T. Stapel 5/9/13

1. VOCs = Volatile Organic Compounds analyzed using EPA Method 8260; only the VOCs detected are listed above.
2. µg/l = micrograms per liter (ppb).
3. Metals analyzed using EPA Method 6020, except for mercury which was analyzed using EPA Method 7470.
4. NR 140 ES = Wisconsin Administrative Code Chapter NR 140 Enforcement Standard.
5. NR 140 PAL = Wisconsin Administrative Code Chapter NR 140 Preventive Action Limit.
6. J = Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.
7. ^ = Instrument related QC exceeds the control limit.
8. - = Standard not established
9. -- = Not analyzed
10. ND = Not Detected
11. Results in *Italics* indicate an exceedence or potential exceedence of the NR 140, WAC PAL.

Well / Drillhole / Borehole Abandonment

Form 3300-005 (R 12/04)

Notice: Completion of this report is required by chs. 160, 281, 283, 289, 291-293, 295, and 299, Wis. Stats., and ch. NR 141, Wis. Adm. Code. In accordance with chs. 281, 289, 291-293, 295, and 299, Wis. Stats., failure to file this form may result in a forfeiture of between $10-25,000, or imprisonment for up to one year, depending on the program and conduct involved. Personally identifiable information on this form is not intended to be used for any other purpose. Return form to the appropriate DNR office and bureau. See instructions on reverse for more information.

3. Well / Drillhole / Borehole Information

☐ Monitoring Well
☐ Water Well
☒ Borehole / Drillhole
Original Construction Date:
If a Well Construction Report is available, please attach.

Construction Type:
☐ Drilled ☐ Driven (Sandpoint) ☐ Dug
☒ Other (specify): DIRECT PUSH

Formation Type:
☒ Unconsolidated Formation ☐ Bedrock

Total Well Depth From Groundsurface (ft.): 10
Casing Diameter (in.): 2.25
Lower Drillhole Diameter (in.):
Casing Depth (ft.):

Was well annular space grouted? ☐ Yes ☐ No ☐ Unknown
If yes, to what depth (feet)?
Depth to Water (feet):

4. Pump, Liner, Screen, Casing & Sealing Material

Pump and piping removed?	☐ Yes	☐ No	☒ N/A
Liner(s) removed?	☐ Yes	☐ No	☒ N/A
Screen removed?	☐ Yes	☐ No	☒ N/A
Casing left in place?	☐ Yes	☐ No	☒ N/A
Was casing cut off below surface?	☐ Yes	☐ No	☒ N/A
Did sealing material rise to surface?	☒ Yes	☐ No	☐ N/A
Did material settle after 24 hours?	☐ Yes	☒ No	☐ N/A
If yes, was hole retopped?	☐ Yes	☐ No	☒ N/A
If bentonite chips were used, were they hydrated with water from a known safe source?	☒ Yes	☐ No	☐ N/A

Required Method of Placing Sealing Material
☐ Conductor Pipe-Gravity ☐ Conductor Pipe-Pumped
☒ Screened & Poured (Bentonite Chips) ☐ Other (Explain): _____

Sealing Materials
☐ Neat Cement Grout ☐ Clay-Sand Slurry (11 lb./gal. wt.)
☐ Sand-Cement (Concrete) Grout ☐ Bentonite-Sand Slurry " "
☐ Concrete ☒ Bentonite Chips

For Monitoring Wells and Monitoring Well Boreholes Only:
☐ Bentonite Chips ☐ Bentonite - Cement Grout
☐ Granular Bentonite ☐ Bentonite - Sand Slurry

5. Material Used To Fill Well / Drillhole

3. Well / Drillhole / Borehole Information

☐ Monitoring Well ☐ Water Well ☒ Borehole / Drillhole

Original Construction Date: _____

If a Well Construction Report is available, please attach.

Construction Type:
☐ Drilled ☐ Driven (Sandpoint) ☐ Dug ☒ Other (specify): DIRECT PUSH

Formation Type:
☒ Unconsolidated Formation ☐ Bedrock

Total Well Depth From Groundsurface (ft.)	Casing Diameter (in.)
10	2.25
Lower Drillhole Diameter (in.)	**Casing Depth (ft.)**

Was well annular space grouted? ☐ Yes ☐ No ☐ Unknown

If yes, to what depth (feet)?	Depth to Water (feet)

4. Pump, Liner, Screen, Casing & Sealing Material

Pump and piping removed?	☐ Yes	☐ No	☒ N/A
Liner(s) removed?	☐ Yes	☐ No	☒ N/A
Screen removed?	☐ Yes	☐ No	☒ N/A
Casing left in place?	☐ Yes	☐ No	☒ N/A
Was casing cut off below surface?	☐ Yes	☐ No	☒ N/A
Did sealing material rise to surface?	☒ Yes	☐ No	☐ N/A
Did material settle after 24 hours?	☐ Yes	☒ No	☐ N/A
If yes, was hole retopped?	☐ Yes	☐ No	☒ N/A
If bentonite chips were used, were they hydrated with water from a known safe source?	☒ Yes	☐ No	☐ N/A

Required Method of Placing Sealing Material
☐ Conductor Pipe-Gravity ☐ Conductor Pipe-Pumped
☒ Screened & Poured (Bentonite Chips) ☐ Other (Explain): _____

Sealing Materials
☐ Neat Cement Grout ☐ Clay-Sand Slurry (11 lb./gal. wt.)
☐ Sand-Cement (Concrete) Grout ☐ Bentonite-Sand Slurry " "
☐ Concrete ☒ Bentonite Chips

For Monitoring Wells and Monitoring Well Boreholes Only:
☐ Bentonite Chips ☐ Bentonite - Cement Grout
☐ Granular Bentonite ☐ Bentonite - Sand Slurry

5. Material Used To Fill Well / Drillhole

From (ft.)	To (ft.)	No. Yards, ~~Sacks~~ Sealant or Volume (circle one)	Mix Ratio or Mud Weight
Surface	10	1/3	

BENTONITE CHIPS

Receipt
The samples were received on 2/11/2015 10:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.4° C.

Except:

Please change the sample ID's as follows:
GP-1 (2'-4') should be GP-8 (2'-4')
GP-1 (8'-10') should be GP-8 (8'-10')
GP-2 (4'-6') should be GP-9 (4'-6')
GP-2 (8'-10') should be GP-9 (8'-10')
GP-3 (2'-4') should be GP-10 (2'-4')
GP-3 (8'-10') should be GP-10 (8'-10')
GP-4 (2'-4') should be GP -11 (2'-4')
GP-4 (8'10') should be GP-11 (8'-10')
GP-5 (2'-4') should be GP-12 (2'-4')
GP-5 (8'-10') should be GP-12 (8'-10')

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
Method(s) 5035: MeOH was added to provide 1:1 ratio

GP-10 (2-4) (500-92046-5), GP-10 (8-10) (500-92046-6), GP-11 (2-4) (500-92046-7), GP-11 (8-10) (500-92046-8), GP-12 (2-4) (500-92046-9), GP-12 (8-10) (500-92046-10), GP-8 (2-4) (500-92046-1), GP-8 (8-10) (500-92046-2), GP-9 (4-6) (500-92046-3), GP-9 (8-10) (500-92046-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: TRC Environmental Corporation.
Project/Site: USH 45 Bristol - 230448

TestAmerica Job ID: 500-92046-1

Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Wisconsin	State Program	5	999580010	08-31-15

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Laboratory: TestAmerica Nashville

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Wisconsin	State Program	5	998020430	08-31-15

COOLER RECEIPT FORM

Cooler Received/Opened On: 2/12/2015 @0830

1. Tracking # 3706 (last 4 digits, FedEx)

Courier: Fed-Ex IR Gun ID: 14740456

2. Temperature of rep. sample or temp blank when opened: 3.3 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO..(NA)

4. Were custody seals on outside of cooler? (YES)...NO...NA

If yes, how many and where: 1 Front

5. Were the seals intact, signed, and dated correctly? (YES)...NO...NA

6. Were custody papers inside cooler? (YES)...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) HF

7. Were custody seals on containers: YES (NO) and Intact YES...NO...(NA)

Were these signed and dated correctly? YES...NO...(NA)

8. Packing mat'l used? (Bubblewrap) Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: (Ice) Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES)...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES)...NO...NA

12. Did all container labels and tags agree with custody papers? (YES)...NO...NA

13a. Were VOA vials received? (YES)...NO...NA

b. Was there any observable headspace present in any VOA vial? YES..(NO)..NA

14. Was there a Trip Blank in this cooler? YES...NO..(NA) If multiple coolers, sequence # NA

I certify that I unloaded the cooler and answered questions 7-14 (intial) HF

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO..(NA)

b. Did the bottle labels indicate that the correct preservatives were used (YES)..NO...NA

16. Was residual chlorine present? YES...NO..(NA)

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) HF

17. Were custody papers properly filled out (ink, signed, etc)? (YES)..NO...NA

18. Did you sign the custody papers in the appropriate place? (YES)...NO...NA

19. Were correct containers used for the analysis requested? (YES)..NO...NA

20. Was sufficient amount of sample sent in each container? (YES)..NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) HF

I certify that I attached a label with the unique LIMS number to each container (intial) HF

21. Were there Non-Conformance issues at login? YES..(NO) Was a NCM generated? YES..(NO)..#_____

BIS = Broken in shipment

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	0.4
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Login Number: 92046
List Number: 2
Creator: Ford, Easton

List Source: TestAmerica Nashville
List Creation: 02/13/15 08:39 AM

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 4/8/2015 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.2º C.

Except: Didn't received the tared weight jar for sample 6 for DRO, weighed out in lab per client.

GC VOA
Method(s) 8015B: Insufficient sample volume was prepared to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with 241238.

Method(s) 8021B: The method blank for 241237 contained Naphthalene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 8021B: Insufficient sample volume was prepared to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with 241237.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
V	Serial Dilution exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

COOLER RECEIPT FORM

Loc: 500
94313

Cooler Received/Opened On 4/9/2015 @ 0840

1. Tracking # 6137 (last 4 digits, FedEx)

Courier: FedEx IR Gun ID 94660220

2. Temperature of rep. sample or temp blank when opened: 4.3 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO..(NA)

4. Were custody seals on outside of cooler? (YES)..NO...NA

If yes, how many and where: (1) Front

5. Were the seals intact, signed, and dated correctly? (YES)...NO...NA

6. Were custody papers inside cooler? (YES)..NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) MDW

7. Were custody seals on containers: YES (NO) and Intact YES...NO...(NA)

Were these signed and dated correctly? YES...NO...(NA)

8. Packing mat'l used? (Bubblewrap) Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: (Ice) Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES)...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES)...NO...NA

12. Did all container labels and tags agree with custody papers? (YES)...NO...NA

13a. Were VOA vials received? (YES)...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...(NA) Soil

14. Was there a Trip Blank in this cooler? (YES)...NO...NA If multiple coolers, sequence #_____

I certify that I unloaded the cooler and answered questions 7-14 (intial) CA

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO..(NA)

b. Did the bottle labels indicate that the correct preservatives were used (YES)...NO...NA

16. Was residual chlorine present? YES...NO...(NA)

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) CA

17. Were custody papers properly filled out (ink, signed, etc)? (YES)...NO...NA

18. Did you sign the custody papers in the appropriate place? (YES)...NO...NA

19. Were correct containers used for the analysis requested? (YES)..NO...NA

20. Was sufficient amount of sample sent in each container? (YES)...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) CA

I certify that I attached a label with the unique LIMS number to each container (intial) CA

21. Were there Non-Conformance issues at login? YES..(NO) Was a NCM generated? YES..(NO)..#_____

BIS = Broken in shipment

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.2
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
TCLP Lead analysis added by client - 500-94313-3.

Receipt
The samples were received on 4/8/2015 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice.
The temperature of the cooler at receipt was 2.2º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Appendix F
Draft Special Provisions

Excavation, Hauling, and Disposal (Bioremediation) of Petroleum Contaminated Soil, Item 205.0501.S.

A Description

A.1 General

This special provision describes excavating, loading, hauling, and bioremediation of petroleum contaminated soil at a DNR licensed facility. The closest DNR licensed landfill facilities that can bioremediate this soil once excavated are:

Waste Management's Pheasant Run Recycling and Disposal Facility (RDF)
19414 60th Street
Bristol, Wisconsin
(262) 857-7956

Republic Services, Inc. Kestrel Hawk Landfill
1989 Oakes Road
Racine, WI 53406
(262) 215-1774

Perform this work in accordance to standard spec 205 and with pertinent parts of Chapters NR 700-754 of the Wisconsin Administrative Code, as supplemented herein. Per NR 718.07, a solid waste collection and transportation service-operating license is required under NR 502.06 for each vehicle used to transport contaminated soil.

A.2 Notice to the Contractor – Contaminated Soil Location

The department and others completed testing for soil and groundwater contamination for locations within this project where excavation is required. Testing indicated that petroleum-contaminated soil is present at the following locations as shown on the plans:

- Station 263+50 to 264+50 from reference line to 50 feet right of reference line, from approximately 0 to 10 feet below grade. Soil excavated from this area will require off-site bioremediation. The estimated volume of contaminated soil to be excavated at this location is 265 cubic yards (approximately 450 tons using a conversion factor of 1.7 tons per cubic yard). Ground water is not expected to be encountered at this location.

Directly load soil excavated by the project at the above location into trucks that will transport the soil to a WDNR-licensed bioremediation facility.

If contaminated soils are encountered elsewhere on the project, terminate excavation activities in the area and notify the engineer.

No active groundwater monitoring wells were observed within the construction limits. If active groundwater monitoring wells are encountered during construction, notify the engineer and protect them to maintain their integrity. The environmental consultant will determine if monitoring wells need to be maintained. For monitoring wells that do need to be maintained, adjust the wells that do not conflict with structures or curb and gutter to be

flush with the final grade. For wells that conflict with the previously mentioned items or if monitoring wells are not required to be maintained, they will be abandoned by others.

If dewatering is required at the above location, conduct the dewatering in accordance with Section C below.

A.3 Excavation Management Plan

The excavation management plan for this project has been designed to minimize the offsite bioremediation of contaminated material. The excavation management plan, including these special provisions, has been developed in cooperation with the WDNR. The WDNR concurrence letter is on file at the Wisconsin Department of Transportation. For further information regarding previous investigation and remediation activities in these areas contact:

Name:	Andrew Malsom
Address:	141 NW Barstow Street, PO Box 798, Waukesha, WI 53187-0798
Phone:	262-548-6705
Fax:	262-548-6891
E-mail:	andrew.malsom@dot.wi.gov

A.4 Coordination

Coordinate work under this contract with the environment consultant:

Consultant:	TRC Environmental Corporation
Address:	150 N. Patrick Blvd. Ste. 180, Brookfield, WI 53045
Contact:	Tyler Stapel, P.E.
Phone:	262-901-2142 (office), 262-825-2045 (cell)
Fax:	262-879-1220
E-mail:	wstapel@trcsolutions.com

The role of the environmental consultant will be limited to:

1. Determining the location and limits of contaminated soil to be excavated based on soil analytical results from previous investigations, visual observations, and field screening of soil that is excavated;

2. Identifying contaminated soils to be hauled to the bioremediation facility;

3. Documenting that activities associated with management of contaminated soil are in conformance with the contaminated soil management methods for this project as specified herein; and

4. Obtaining the necessary approvals for bioremediation of contaminated soil from the bioremediation facility.

Provide at least a 14-calendar day notice of the preconstruction conference date to the environmental consultant. At the preconstruction conference, provide a schedule for all

excavation activities in the areas of contamination to the environmental consultant. Also notify the environmental consultant at least three calendar days prior to commencement of excavation activities in each of the contaminated areas.

Coordinate with the environmental consultant to ensure that the environmental consultant is present during excavation activities in the contaminated areas. Perform excavation work in each of the contaminated areas on a continuous basis until excavation work is completed.

Identify the DNR licensed bioremediation facility that will be used for bioremediation of contaminated soils, and provide this information to the environmental consultant no later than 30 calendar days prior to commencement of excavation activities in the contaminated areas or at the preconstruction conference, whichever comes first. The environmental consultant will be responsible for obtaining the necessary approvals from the bioremediation facility for bioremediation of contaminated soils. Do not transport contaminated soil offsite without prior approval from the environmental consultant.

A.5 Health and Safety Requirements
Supplement standard spec 107.1 with the following:

During excavation activities, expect to encounter soil contaminated with gasoline, diesel fuel, fuel oil, or other petroleum related products and metals. Site workers taking part in activities that will result in the reasonable probability of exposure to safety and health hazards associated with hazardous materials shall have completed health and safety training that meets the Occupational Safety and Health Administration (OSHA) requirements for Hazardous Waste Operations and Emergency Response (HAZWOPER), as provided in 29 CFR 1910.120.

Prepare a site-specific Health and Safety Plan, and develop, delineate and enforce the health and safety exclusion zones for each contaminated site location as required by 29 CFR 1910.120. Submit the site-specific health and safety plan and written documentation of up-to-date OSHA training to the engineer prior to the start of work.

B (Vacant)

C Construction
Supplement standard spec 205.3 with the following:

Control operations in the contaminated areas to minimize the quantity of contaminated soil excavated.

The environmental consultant will periodically monitor soil excavated from the contaminated areas. The environmental consultant will evaluate excavated soil based on field screening results, visual observations, and soil analytical results from previous environmental investigations. Assist the environmental consultant in collecting soil samples for evaluation using excavation equipment. The sampling frequency shall be a maximum of one sample for every 20 cubic yards excavated.

Directly load and haul soils designated by the environmental consultant for offsite disposal to the DNR approved bioremediation facility. Use loading and hauling practices that are appropriate to prevent any spills or releases of petroleum-contaminated soils or residues. Prior to transport, sufficiently dewater soils designated for off-site disposal so as not to contain free liquids.

If dewatering is required in an area of known contamination, water generated from dewatering activities may contain contaminants and require special handling and disposal. Limit excavation in the location described above in A2 to minimize the handling of groundwater. Notify the engineer of any dewatering activities, and obtain any permits necessary to discharge or dispose of contaminated water. Provide copies of such Permit to the engineer. Ensure continuous dewatering and excavation safety at all times. Provide, operate, and maintain adequate pumping equipment and drainage and disposal facilities. Meet any requirements and pay any costs for obtaining and complying with such permit use. Follow all applicable legislative statutes, judiciary decisions, and regulations of the State of Wisconsin.

Costs associated with excavation dewatering in the contaminated area are considered incidental to this pay item. The Wisconsin Department of Transportation will be the generator of regulated solid waste from this construction project.

D Measurement

The department will measure Excavation, Hauling, and Disposal of Petroleum Contaminated Soil in tons of contaminated soil accepted by the bioremediation facility as documented by weight tickets generated by the bioremediation facility.

E Payment

The department will pay for measured quantities at the contract unit price under the following bid item:

ITEM NUMBER	DESCRIPTION	UNIT
205.0501.S	Excavation, Hauling, and Disposal of Petroleum Contaminated Soil	Ton

Payment is full compensation for excavating, segregating, loading, hauling, and disposal of contaminated soil; obtaining solid waste collection and transportation service operating licenses; assisting in the collection soil samples for field evaluation; and dewatering of soils prior to transport, if necessary. No additional payment will be made for tipping fees associated with the disposal of contaminated soil.
