RE: Budget Request Groundwater Investigation - Rath Property  
1304 St. Rose Road  
Cuba City, Wisconsin 53807

Dear Ms. DiMaggio:

I am requesting budget for additional activities at the Richard Rath property in Cuba City, Wisconsin. We conducted a soil investigation. You approved a budget for the excavation of ~450 tons of contaminated soil from the site, which was recently conducted, although we were not able to remove as much contaminated soil as hoped due to the presence of utilities and the fragile foundation of the building. We plan to install three monitoring wells at the site to evaluate the impact of the petroleum release on groundwater quality. One of the wells will be installed in the source area along the south side of the building, another well will be installed between the source area and the water supply well. A third well will be installed to the north. The proposed well locations are shown on Figure 1.

We anticipate installing the monitoring wells to a depth of 80 feet since nearby water supply wells show groundwater is present at ~70 feet below grade. Drilling for the wells will extend through the soil and into the bedrock which is present at a depth of ~10 feet. No soil sampling is proposed during the well installation since the soil impacts were determined previously.

The budget request includes costs to install 3 monitoring wells to an estimated depth of 80 feet, survey the well network, conduct a well reconnaissance, test the hydraulic conductivity, dispose of investigative wastes, and perform 2 rounds of post-remedial monitoring. We have included the costs to collect groundwater samples from the three monitoring wells, the private well at the site, and the cost for one QA/QC sample per event. The analytical costs are for full VOCs from the monitoring wells and QA/QC for the first round and PVOC + naphthalene during the second round, the water supply well will be analyzed for VOCs both rounds. We will sample for PAHs from the monitoring wells (3 total) during the first round.

A site investigation report will be generated after the initial round of groundwater sampling has been conducted so we can discuss the need for any additional site work or possible closure. The costs for the completed Site Investigation report and a follow up letter report are included in the budget request.

We are requesting an additional \$35,739.28 to conduct the activities described above. The costs are included on the attached U&C standardized invoice. Please feel free to call Mark Fryman or me at 838-9120.

Sincerely,  
Seymour Environmental Services

Robyn Seymour  
Hydrogeologist
