

Emerging Contaminant Evaluation
Rath Property (BRRTS: 03-22-563937)
1304 St. Rose Road - Cuba City , WI

Based on the past site usages we believe that emerging contaminants, such as PFAs, are not contaminants of concern at the property.

The property historically has been the site of a residence and a general store. These usages are not characteristic of activities which are sources for emerging contaminants. No operations which handle PFAs, such as at the textile finishing, dry cleaning, plastic or cardboard manufacturing, metallurgical processing, or fire fighting training, are known to have been present at the site.
