**RE: PFAS Groundwater Confirmation Sampling Summary Report  
Ashview Terrace Apartments  
Ashwaubenon, Wisconsin  
BRRTS # 02-05-564043**

Dear Mr. Christopher,

On September 20, 2021, Tetra Tech conducted groundwater sampling for polyfluoroalkyl and perfluoroalkyl substances (PFAS) at the Ashview Terrace Apartments in Ashwaubenon, Wisconsin (**Figure 1**). The sampling was performed in response to a request from the Wisconsin Department of Natural Resources (WDNR) for additional groundwater sampling to confirm the PFAS groundwater analytical results obtained as part of the May 2021 PFAS investigation at the Ashview Terrace Apartments (Site) and documented in the *PFAS Investigation Summary Report, Ashview Terrace Apartments, Ashwaubenon, WI*, dated July 22, 2021.

The September 2021 PFAS sampling was conducted in accordance with the WDNR-approved work plan, *PFAS Site Investigation Work Plan, Ashview Terrace Apartments, Ashwaubenon, WI*, dated November 16, 2020, and in adherence to the Tetra Tech Standard Operating Procedure for PFAS sample acquisition, Appendix A of the work plan. This report summarizes the Ashview Terrace Apartments (Site) PFAS groundwater sampling and includes a discussion of the Wisconsin PFAS regulatory background, the sampling and analytical methods used, and groundwater sample analytical results.

## **REGULATORY BACKGROUND**

In June 2019, the Wisconsin Department of Health Services (WDHS) developed recommended groundwater standards for two PFAS, perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS). The WDHS recommended an Enforcement Standard of 20 ng/L and a Preventive Action Limit of 2 nanograms per liter (ng/L) for both PFOA and PFOS, individually and combined. In November 2020, the WDHS developed recommended groundwater standards for 16 additional PFAS. However, on March 1, 2021, the WDNR removed perfluorooctadecanoic acid (PFODA) from the list of PFAS with WDHS recommended standards. The current WDHS recommended standards for PFAS are summarized in the following table.

For PFOSA, NEtFOSE, NEtFOSA, NEtFOSAA, PFOS, and PFOA (collectively these will be called the “select six PFAS”), the WDHS has recommended an Enforcement Standard of 20 ng/L and Preventive Action Limit of 2 ng/L for individual and combined concentrations of these select six PFAS. At this time, the WDNR has not amended *Table I - Drinking Water & Groundwater Quality Health Standards/Advisory Levels* to include enforceable standards for any PFAS. The current list of 33 PFAS compounds the WDNR expects to be included in PFAS sample analysis is presented on the Wisconsin DNR PFAS List 1.1.21 found in the Wisconsin DNR PFAS Updates, dated March 1, 2021.

## GROUNDWATER SAMPLING AND ANALYTICAL METHODS

Prior to groundwater sampling, the static water level was measured at each well. Field personnel gauged depth-to-water from the top of the well casings with a water-level interface probe accurate to 0.01 foot. Measurements were subtracted from top-of-casing elevations to obtain groundwater elevations, provided in **Table 1**.

Groundwater samples were collected from the monitoring wells using low-flow techniques. Groundwater was purged using a peristatic pump until a stabilized water level and stabilized field parameters were achieved. Field parameters including pH, specific conductance, temperature, oxidation-reduction potential (ORP), dissolved oxygen (DO), and turbidity were measured using a YSI ProDSS multi-parameter water quality meter. The instrument was calibrated according to the manufacturer’s specifications prior to sampling. To avoid cross-contamination between wells, new HDPE and silicone tubing was used for each monitoring well. The water quality parameters were collected at three-minute intervals until all parameters had stabilized for three consecutive readings

and were within the following limits:

- pH (0.1 unit)
- Specific conductance (3%)
- Temperature (3%)
- ORP (10 millivolts)
- Turbidity (10%)
- DO (10%)

Drawdown was maintained at 0.3 foot or less during purging and sampling. Groundwater monitoring field data are included in **Table 2**.

Following stabilization, groundwater samples were collected directly into clean, pre-labeled, laboratory-provided HDPE containers and placed into an ice-packed cooler. Samples were shipped to Vista and analyzed for the 33 PFAS included on the Wisconsin DNR PFAS List 1.1.21 via a modified EPA Method 537 utilizing isotope dilution. The laboratory analytical report for the groundwater samples is included in **Attachment 1**.

### **QUALITY ASSURANCE/QUALITY CONTROL (QA/QC) SAMPLES**

QA/QC samples were collected to assure PFAS contamination was not introduced to the samples from the sample collection equipment and to assess the accuracy and reliability of concentration results. QA/QC sample collection methodology is provided below:

- One equipment rinsate blank sample was collected during groundwater sampling. Reusable sampling equipment was decontaminated, before and after each use, using a Liquinox solution and rinsed with laboratory provided reagent-free water. Following decontamination, laboratory provided reagent-free water was poured over non-disposable equipment (water level meter) and was run through and over disposable equipment (tubing and nitrile gloves). The rinsate was collected into laboratory supplied containers.
- One field duplicate sample was collected concurrently with the MW-21-03 groundwater sample.

QA/QC samples were collected into laboratory-provided HDPE containers and placed into an ice-packed cooler. Samples were shipped to Vista and analyzed for the 33 PFAS included on the Wisconsin DNR PFAS List 1.1.21 via a modified EPA Method 537 utilizing isotope dilution. The laboratory analytical report for the QA/QC samples is included in **Attachment 1**.

### **GROUNDWATER ELEVATION MEASUREMENTS**

Prior to the May 2021 Site PFAS investigation, which included the installation of three monitoring wells, groundwater flow was expected to be toward the southeast. This was based on local topography and the presence of the Fox River (a major groundwater sink) located 1.4 miles to the southeast of the Site. The groundwater elevation measurements from the May PFAS investigation did not exhibit the expected pattern and indicated a general groundwater flow direction towards the southwest. Further review of the lithology observed during the May 2021 investigation suggested the northeastern well, MW-21-01, was screened in an interval of perched groundwater and that the groundwater flow direction could not be determined using groundwater elevations obtained from the Site monitoring well network. However, a review of groundwater elevation contours associated with the WDNR site immediately south of Ashview Terrace Apartments (BRRTS # 02-05-559562) confirm that a

groundwater flow to the southeast is prevalent in the area. Soil boring logs from the May 2021 Site investigation were included as Attachment 3 of the PFAS Investigation Summary Report.

Groundwater elevation measurements obtained as part of the September 2021 sampling event indicated conditions that were consistent with the May 2021 results. Monitoring well construction details and the September 2021 groundwater elevations are summarized on **Table 1**.

## GROUNDWATER ANALYTICAL RESULTS

The PFAS analytical results associated with the groundwater samples collected from the monitoring wells indicate the following:

- PFAS were detected in all 3 monitoring wells.
- The total concentration of the select six PFAS was above the WDHS recommended Preventive Action Limit but below the recommended Enforcement Standard in MW-21-01 and MW-21-02.
- The total concentration of the select six PFAS was detected above the WDHS recommended Preventive Action Limit and the WDHS recommended Enforcement Standard in monitoring well MW-21-03.
- The duplicate sample collected at MW-21-03 indicated maximum percent difference of 21.1 percent in PFAS detections.
- No PFAS were detected in the equipment rinsate blank sample collected during groundwater sampling.
- The September 2021 PFAS groundwater analytical results are consistent with the May 2021 results except for a decrease in the concentration of PFOA from 23.4 ng/L to 5.24 ng/L and an increase in PFOSA from 3.70 ng/L to 19.40 ng/L in monitoring well MW-21-03.

A table summarizing the May 2021 and September 2021 the PFAS groundwater sampling results is presented as **Table 3**. The laboratory analytical report for groundwater samples is provided in **Attachment 1**. PFAS detections exceeding the WDHS recommended Preventive Action Limits for groundwater are presented on **Figure 2**.

## SUMMARY

Consistent with the May 2021 groundwater analytical results, low concentrations of PFAS were measured in groundwater at all three wells on the Site. The only significant difference between the two sampling events is a decline in PFOA concentration from 23.4 ng/L in May 2021 to 5.24 ng/L in September 2021 and an increase in PFOSA concentration from 3.70 ng/L in May 2021 to 19.40 ng/L in September 2021 in monitoring well MW-21-03. No concentrations for individual PFAS were detected above the WDHS recommended Enforcement Standards in September 2021. The combined total concentration of the six select PFAS in the groundwater sample collected from monitoring well MW-21-03 was 26.95 ng/L, which slightly exceeds the WDHS recommended Enforcement Standard of 20 ng/L. The combined concentration of the six select PFAS in the groundwater samples collected from the other monitoring wells (MW-21-01 and MW-21-02) were below the WDHS recommended Enforcement Standard.

Notes:

PFAS laboratory analysis was completed using Modified USEPA Method 537.

ng/L = nanogram per liter

J = The amount detected is greater than the Method Detection Limit, but less than the Reporting Limit.

Q = The ion transition ratio is outside of the acceptance criteria.

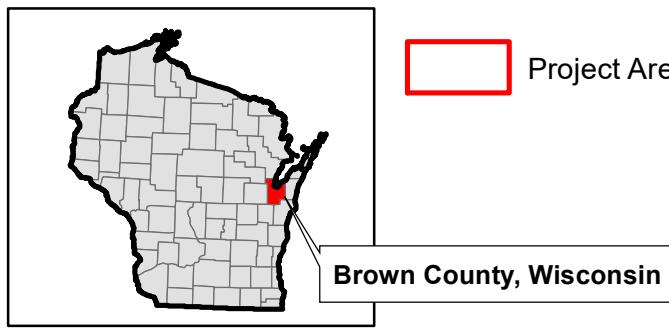

\* The Wisconsin Department of Health Services (WDHS) recommends a combined Enforcement Standard of 20 ng/L and combined Preventive Action Limit of 2 ng/L for PFOSA, NEtFOSE, NETFOSA, NETFOSAA, PFOA and PFSO.

**Bold** = value exceeds the Method Detection Limit.

Blue highlighted values exceed the WDHS Recommended Preventive Action Limit for groundwater.

Yellow highlighted values exceed both the WDHS Recommended Preventive Action Limit and the WDHS Recommended Enforcement Standard for groundwater.

*Vista Analytical Laboratory certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Vista.*

**Vista Work Order No. 2109262****Case Narrative****Sample Condition on Receipt:**

Three aqueous samples were received and stored securely in accordance with Vista standard operating procedures and EPA methodology. The samples were received in good condition and within the recommended temperature requirements.

**Analytical Notes:****PFAS Isotope Dilution Method**

The samples were extracted and analyzed for a selected list of PFAS using Vista's PFAS Isotope Dilution Method. The results for PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

**Holding Times**

The samples were extracted and analyzed within the hold times.

**Quality Control**

The Initial Calibration met the method acceptance criteria. The recovery for HFPO-DA was greater than 130% in one of the continuing calibration standards. This analyte was not detected in the associated samples. The recoveries of all other analytes were within the acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above the Reporting Limit. The OPR recoveries were within the method acceptance criteria.

The labeled standard recoveries for all QC and field samples were within the acceptance criteria.

*Vista Analytical Laboratory certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Vista.*

**Vista Work Order No. 2109265****Case Narrative****Sample Condition on Receipt:**

Two aqueous samples were received and stored securely in accordance with Vista standard operating procedures and EPA methodology. The samples were received in good condition and within the recommended temperature requirements.

**Analytical Notes:****PFAS Isotope Dilution Method**

The samples were extracted and analyzed for a selected list of PFAS using Vista's PFAS Isotope Dilution Method. The results for PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

**Holding Times**

The samples were extracted and analyzed within the hold times.

**Quality Control**

The Initial Calibration met the method acceptance criteria. The recovery for HFPO-DA was greater than 130% in one of the continuing calibration standards. This analyte was not detected in the associated samples. The recoveries of all other analytes were within the acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above the Reporting Limit. The OPR recoveries were within the method acceptance criteria.

The labeled standard recoveries for all QC and field samples were within the acceptance criteria.
