Re: Allyn Property – Site Investigation Update – BRRTS ID #02-31-564071 – OMMNI Job No. N2162C15

Dear Mr. Beggs:

OMNNI Associates executed the work plan proposed on October 29, 2018. The following is an update of the work completed, and summary of results.

Background:

On September 10, 2018 a representative from OMNNI Associates met with Mr. Tauren Beggs and Mr. John Emery - Manager of the Allyn Property at the Department of Natural Resources office in Green Bay. Based on the meeting, it was decided the best course of action for the property would be to further delineate the groundwater contamination (both vertically and horizontally) and conduct a sub-slab vapor investigation at the properties which immediately border the subject property to the west and east.

Based on the meeting, OMNNI proposed the following work:

- Install two permanent monitoring wells to the east and northeast of the subject property in the right-of-way. These wells will be installed to a depth of 25' and are anticipated to be screened to 15' below ground surface.
- Install one permanent piezometer directly to the northeast of the subject property in the alley between the buildings. This piezometer will be installed to a depth of 40' and is anticipated to be screened at the bottom 5' of the piezometer. Additionally, it is anticipated this piezometer will be advanced 10' into bedrock.
- Conduct one round of groundwater sampling on the previously installed monitoring wells on the site.
- Obtain one soil sample from each of the newly installed monitoring wells and analyze for volatile organic compounds.
- Conduct a sub-slab vapor test in the basement of the buildings directly to the east and west of the subject property. The location of the vapor pins and number of vapor samples will be determined after a site visit. However, it is anticipated there will be one to two vapor probes installed per building.

Work Conducted:

On October 31, 2018, OMNNI Associates mobilized to the site to conduct drilling operations at 111 Steele Street in Algoma Wisconsin. OMNNI oversaw the installation of two permanent monitoring wells and one piezometer (MW5, MW6, and PZ1 respectively).

Soil Investigation:

At the request of the DNR, OMNNI obtained one soil sample for VOC's in each of the new monitoring wells/piezometer at the site (see Table 1). The samples were obtained from an unsaturated portion of

the soil which exhibited signs of contamination. The soil samples were sent to Synergy Environmental Lab, Inc. for analysis (See Laboratory Analytical). The soil cuttings were containerized in 55-gallon drums and held on site pending analysis. The drums of investigative waste were stored on-site on the west side of the building.

Groundwater Investigation:

The wells installed to the north and northeast of the site deviated slightly from the proposed locations due to underground and overhead utilities.

The installation of the wells occurred on October 31, 2018 (See Well Construction Reports). The wells were then developed on November 19, 2018 (See Well Development Record). All purged groundwater was containerized in 55-gallon drums pending disposal. The drums were stored on-site on the west side of the building.

After development of the wells and piezometer, OMNNI remobilized to the site on January 4, 2019 to conduct groundwater sampling of monitoring wells MW1 through MW6, and PZ1 (See Groundwater Sampling Sheet). The groundwater samples were sent to Synergy Environmental Lab, Inc for analysis (See Laboratory Analytical).

Vapor Investigation:

The vapor investigation portion of this phase of the investigation consisted of placing vapor pins in the adjacent buildings of the subject property.

OMNNI reached out to the Department of Health Services to request their assistance in securing access agreements for the adjacent buildings. As of November 30, 2018, both access agreements were in place and OMNNI was able to schedule the vapor sampling on January 4, 2019.

Vapor Pins VP101 and VP102 were placed in the basement of the building to the east of the subject property (See Site detail Map). Vapor Pin VP103 was placed in the basement of the building to the west of the subject property (See Site Detail Map). Both buildings were accessible on the date of sampling and neither building had a complete basement. The locations of the vapor pins were chosen in the field as there were limited spaces to sample in the basements of these two facilities. The room where VP103 was taken was small and there were no other access points. OMNNI believes the limited vapor points are still representative of the overall conditions.

Results & Discussion:

Soil:

Based on the soil data from the most recent round of sampling, the soil exhibits no signs of soil contamination outside of the soil-to-groundwater pathway exceedance in PZ1 which was most recently sampled (See Table 1). Based on these soil results, it appears the soil contamination above RCLs is limited to the subject property. However, the soil-to-groundwater pathway exceedance at PZ1 appears to be in the City of Algoma street right-of-way (ROW).

Groundwater:

Based on the results of the soil and groundwater sampling at the site, with one exception, all of the wells sampled exhibited enforcement standard exceedances for tetrachloroethene (PCE). The one exception was in MW6 which exhibited a preventive action level exceedance (See Figure 2 and Table 2). Piezometer PZ1, which was advanced into the bedrock, also shown an enforcement standard exceedance for PCE at a level of 10.7 ug/L (micrograms per liter).

To date, the extent of the contaminant plume has yet to be fully identified in the groundwater. However, an estimated extent of the contaminant plume is shown in Figure 3, with its associated flow direction in Figure 2. There are enforcement standard exceedances in all of the monitoring wells on site with the exception of MW6 (the easternmost well). Due to this, the site will need additional investigation.

Based on a review of the data from the site, it appears there is a northeasterly trajectory to the contaminant plume. Additionally, it appears there is a downward migration of the contaminant plume, which is to be expected based on the subsurface conditions. The contaminant plume extends beyond the property boundaries at the subject property above enforcement standard levels. The groundwater contamination extends into the City of Algoma's street right-of-way and is likely it extends to the properties adjacent to the northeast and east.

Vapor:

Although the vapor samples do illustrate detections of volatile organic compounds, they are all below the Wisconsin residential vapor risk screening levels in all locations (See Table 3). Based on the screening levels, there does not appear to be an off-site vapor concern at this time.

Conclusion & Recommendation:

The latest round of investigation and sampling provided OMNNI with pertinent data for the site. Based on the data at hand, there is a high likelihood the soil and vapor extents of contamination will be satisfied by the Department of Natural Resources. However, the groundwater contamination has not yet been fully delineated in either the horizontal or vertical directions. It is very likely another set of groundwater monitoring wells will need to be installed and sampled. Additionally, the data shows contamination in the City of Algoma right-of-way which is likely due to the release at the subject property. There is also a high probability the PCE contamination extends beyond the street right-of-way and into adjacent properties. At a minimum, OMNNI recommends quarterly groundwater sampling of the monitoring wells and piezometer to better determine the dispersion of the PCE contamination at the site. Furthermore, OMNNI recommends obtaining permission from adjacent property owners to install additional monitoring wells in an effort to define the extent of contamination.

Professional Certification:

"I, Christopher J. Rogers, hereby certify that I am a hydrogeologist as that term is defined in s. NR 712.03 (1), Wis. Adm. Code, am registered in accordance with the requirements of ch. GHSS 2, Wis. Adm. Code, or licensed in accordance with the requirements of ch. GHSS 3, Wis. Adm. Code, and that, to the best of my knowledge, all of the information contained in this document is correct and the document was prepared in compliance with all applicable requirements in chs. NR 700 to 726, Wis. Adm. Code."

The diagram illustrates a vertical cross-section of a monitoring well. It shows a borehole at the bottom, followed by a filter pack, a screen joint, and a well bottom. Above these are several layers of backfill material (fine sand, filter pack, and bentonite seal) and protective pipe sections. The top section includes a protective cover pipe and a cap and lock. Labels A through N correspond to specific points on the well profile, such as the top elevation of the protective pipe (A), the top elevation of the well casing (B), land surface elevation (C), the bottom of the surface seal (D), and various points along the borehole (E through N).

I hereby certify that the information on this form is true and correct to the best of my knowledge.

Please complete both Forms 4400-113A and 4400-113B and return them to the appropriate DNR office and bureau. Completion of these reports is required by chs. 160, 281, 283, 289, 291, 292, 293, 295, and 299, Wis. Stats., and ch. NR 141, Wis. Adm. Code. In accordance with chs. 281, 289, 291, 292, 293, 295, and 299, Wis. Stats., failure to file these forms may result in a forfeiture of between \$10 and \$25,000, or imprisonment for up to one year, depending on the program and conduct involved. Personally identifiable information on these forms is not intended to be used for any other purpose. NOTE: See the instructions for more information, including where the completed forms should be sent.

Groundwater Sampling Log

Project information:

Project Name: Allyn's - Algoma

Well ID: MW1

Date: 1/4/2019

OMNNI Project Number: N2162C15

Project Address: 111 Steele Street, Algoma WI

OMNNI Representative: Quin Lenz/Chris Rogers

Water Quality Meter (Make, Model, S/N): Horiba U-52, HGS NO. YYK5E939

Water Level Information:

Total Well Length: 25.0

Length of Water Column:

4.27

Depth of Water (ft. bgs): 20.73

Well Volume (c*0.165[for 2" dia. Pipe]): 0.70

Well Purging Data:

Purge Method:

Minimum required purge volume (4 well volumes):

2.8

Water Quality Parameters:

Time	Gallons	Temp (°C)	pH	ORP (mV)	DO (ppm)	COND (uS/cm)	TDS (ppm)	TURB (NTU)	Notes
3:55	Initial								slight turbidity
4:15	1.0	10.72	7.60	146	5.54	1370	0.310	3.5	clear
4:24	2.0	11.08	7.37	16	11.72	481	0.313	3.4	clear
4:32	3.0	11.20	7.39	7	6.66	492	0.320	5.3	clear
4:39	3.5	11.20	7.34	-10	5.23	504	0.323	4.2	

Temp = Degrees Celsius

COND = Electrical conductivity

ORP = Oxidation Reduction Potential

TDS = Total Dissolved Solids [expressed as electrical conductivity]

DO = Dissolved Oxygen

TURB = Turbidity [LED transmission/front 30° scattering method]

Method of sampling:

low flow

Have groundwater parameters been met?

Yes

No

Sample ID: MW1

Analysis: VDL

Sample Time: 4:39

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code	Comment
-------------	----------------

1 Laboratory QC within limits.

50 Results not corrected for percent solids.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

Comments/Special Instructions (*Specify groundwater "GW", Drinking Water "DW", Waste Water "WW", Soil "S", Air "A", Oil, Sludge etc.)

Soil Samples collected during Well installation
VOCS preserved with Methanol

Sample Integrity - To be completed by receiving lab.

Method of Shipment: air

Temp. of Temp. Blank _____ °C On Ice: X

Cooler seal intact upon receipt: X Yes _____ No

Relinquished By: (sign)

Relinquished By: (sign) J - D Time 4:23pm Date 11/1/18 Received By: (sign) _____ Time _____ Date _____

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code **Comment**

1 Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.
