Subject: Phase II Environmental Site Investigation- Preliminary Results

440<sup>th</sup> Air Lift Wing Air Reserve Station  
General Mitchell Airport  
Milwaukee, Wisconsin

Dear Mr. Boettcher,

Earth Tech conducted Phase II site investigation activities at the 440<sup>th</sup> Air Lift Wing (440th) Air Reserve Station (ARS) located at General Mitchell International Airport (GMIAP), Milwaukee, Wisconsin. This letter summarizes the preliminary soil and groundwater analytical results from the investigation. The scope of work included surface soil sampling in the open stormwater drainage ditches and the grassy area to the east of the aircraft parking apron, soil sampling adjacent to and beneath the Oil/Water Separators (OWSs), soil sampling beneath the aircraft parking apron, soil sampling at the flare burn site and groundwater sampling from temporary wells installed adjacent to the OWSs. Field activities also included cleaning and closing several fuel tanks and OWSs which is not discussed in this letter. All field activities including sample collection, decontamination procedures and shipping procedures were completed in accordance to the Field Sampling Plan dated October 31, 2007. Any deviations from the sampling plan are described in the Daily Quality Control Reports (DQCR).

The soil and groundwater analytical results were compared to the screening levels presented in the Wisconsin Department of Natural Resources (WDNR), Soil Cleanup Standards, Chapter NR 720 for benzene, toluene, ethylbenzene and xylenes (BTEX) and metals. In the absence of screening criteria for a compound and for the Volatile Organic Compounds (VOCs), the default screening level from the Environmental Protection Agency (EPA) Region III Risk Based Concentration (RBC) Table was used for comparison.

## Aircraft Parking Apron

### *Field Activities*

Con-Cor was onsite on November 6, 2007 to core through the concrete at twenty-four boring locations at the Aircraft Parking Apron site. Earth Tech conducted direct-push technology sampling of soil borings SB-01 through SB-08 on November 8, 2007 using a truck-mounted Earthprobe Model 200 (Geoprobe). The soil borings located on the aircraft apron were continuously sampled to 8 feet below the top of concrete using a 1.5-inch diameter stainless steel macro-core sampler with acetate sleeves. One soil sample was collected from each boring for chemical analysis of VOCs, total petroleum hydrocarbons (volatile and extractable TPH) and glycol. Based on field screening results using a MiniRae 2000 photo-ionization detector (PID), soil samples collected for laboratory analysis were taken directly below the crushed rock sub-base underlying the concrete from the 2.0 to 3.0 foot depth interval.

SB-09 through SB-12, located on the aircraft apron were continuously sampled to 8 feet below the top of concrete on November 9, 2007. Soil borings SB-13 through SB-17 were hydroexcavated from ground surface to 4 feet below grade. The purpose of the hydroexcavating was to verify whether utilities were present. SB-13 through SB-17, located along the grassy area next to the aircraft apron were continuously sampled 4 to 8 feet below grade on November 14, 2007. Samples from these borings were collected by hand auger from the 0.5 to 1.0 foot depth interval. All soil samples from the aircraft apron locations were screened using a Minirae 2000 PID with readings at background concentrations (0 ppm) except for the following samples:

<u>Soil boring ID</u>	<u>Sample Depth (ft)</u>	<u>Head Space PID Measurement (ppm)</u>
SB-11S	2-3	11.3
	3-4	4.0
	4-5	2.2
	5-6	1.3
	6-7	0.8
	2-3	9.2
SB-12S		

### *Analytical Results*

The analytical results for the Aircraft Parking Apron are included in Table 1. The samples collected were analyzed for TPH, glycol and VOCs. The compounds analyzed were either undetected or below the soil screening levels. A few VOCs such as 2-butanone, acetone, benzene, hexane and 1,1,2

trichloro 1,2,2 triflouoroethane were detected in some of the borings; however, the concentrations of these compounds were below the soil screening criteria.

## Flare Burn Site

### *Field Activities*

Earth Tech conducted sampling at the Flare Burn Site on Nov 13, 2007. A geophysical survey was conducted in an attempt to definitively locate the flare burn pit, but the survey was inconclusive. Alternatively, three soil borings were drilled using a truck-mounted Earthprobe Model 200 -Geoprobe to determine the location of the flare burn pit based on variations in soil type. Fill material was identified at all three locations approximately 2.5 to 3.0 feet below grade underlain by native soil. A discussion with Frank Martin of the 440<sup>th</sup>, who witnessed the flare burn, revealed that the pit was approximately 2.5 to 3.0 feet deep and that the walls of the pit extended 2 feet above the original ground surface. The target depth for collecting soil samples at the site was 4.5 to 5.0 feet below grade based on the thickness of the fill material and information provided by Mr. Martin.

Five soil borings (SB-18 thru SB-22) were continuously sampled to 8 feet below grade using a 1.5-inch diameter stainless steel macro-core sampler with acetate sleeves. One soil sample was collected from each boring for chemical analysis. These samples were collected two feet below the bottom of the flare burn pit, approximately between 4.5 to 5.0 feet below grade. All soils from flare burn locations were screened using a Minirae 2000 PID with readings at background concentrations (0 ppm).

### *Analytical Results*

The analytical results for the Flare Burn Site are included in Table 2. The samples collected were analyzed for Resource Conservation and Recovery Act (RCRA) metals, mercury and explosives. There were no detections of explosives in all the samples collected from the Flare Burn Site. Mercury concentrations detected in the borings were well below the soil cleanup criterion. Arsenic was detected in all the samples (SB-18 through SB-22) collected from the Flare Burn Site above the soil screening level of 1.6 mg/kg. The concentrations ranged from 5.9 mg/kg at SB-21 to 36.2 mg/kg at SB-22. The concentrations from three borings SB-18, SB-20 and SB-22 exceeded the soil background concentration of 10 mg/kg.

## Oil-Water Separators

### *Field Activities-Soil and Groundwater Sampling*

Earth Tech conducted sampling at the OWSs located at the following buildings: 104A, 104B, 208, 217, 219, 302, 308 and 314. Five borings (01-05) were drilled at each location and one of these borings (05) was converted to a temporary monitoring well (TMW-01). Each boring was hydroexcavated from ground surface to 4 feet below grade to clear utilities. Six additional borings were drilled at Building 308. A temporary monitoring well was not installed at the building location 219 due to boring collapse and the lack of evidence of contamination in the soil. A total of forty six borings and seven temporary monitoring wells were installed at the eight buildings.

Two soil samples were collected from each of the borings for lab analysis except the boring that was converted to a monitoring well. One soil sample and one groundwater sample were collected from the boring converted to temporary monitoring well for lab analysis.

### *Analytical Results*

#### **Buildings 104A and 104B**

The soil analytical results for Buildings 104A and 104B are included in Table 3. The soil samples collected from buildings 104A and 104B were analyzed for TPH, RCRA metals and VOCs. TPH concentrations in all the samples collected were either undetected or below 250 mg/kg.

Arsenic concentrations were detected above the soil screening level of 1.6 mg/kg in the following soil samples at 104A: SB-104A-02A, SB-104A-03A and SB-104A-05A. At 104B, samples from SB-104B-01A, SB-104B-01B, SB-104B-02A, SB-104B-03B, SB-104B-04A, SB-104B-04B and SB-104B-05A exceeded the soil screening level for arsenic. The concentrations ranged from 0.42 mg/kg in SB-104A-04A to 3.2 mg/kg in SB-104A-03A at Building 104A. The concentrations ranged from 0.68 mg/kg at SB-104B-02B to 4.7 mg/kg at SB-104B-01B at Building 104B. However, all of the concentrations were lower than the background level of 10 mg/kg for arsenic in the soil for this area. All the other RCRA metals detected were below the soil screening levels.

There were detections of a few VOCs such as acetone, benzene, carbon disulfide, hexane, 1,3,5 – trimethylbenzene, total xylenes, and ethylbenzene in some of the soil samples; however, these concentrations were below the soil screening levels. All the other VOCs analyzed were below the detection limits.

Soil borings, SB-104A-05 and SB-104B-05 were converted to temporary monitoring wells, TMW-104A-01 and TMW-104B-01 respectively. One groundwater sample was collected from each

monitoring well and analyzed for TPH, RCRA metals and VOCs. Lead was detected above the groundwater screening level of 0.015 mg/L at 0.019 mg/L in TMW-104A-01 and 0.147 mg/L at TMW-104B-01. The other RCRA metals analyzed were either undetected or did not exceed the groundwater screening levels at TMW-104A-01. The VOCs analyzed were either undetected or below the groundwater screening levels at TMW-104A-01.

At TMW-104B-01, the arsenic concentration (0.031 mg/L) exceeded the groundwater screening level of 0.01 mg/L. Benzene was detected at concentration (6.7 µg/L) exceeding the groundwater screening level of 5 µg/L. Vinyl chloride was detected at 4.2 µg/L, exceeding the groundwater screening level of 0.2 µg/L. All other RCRA metals and VOCs analyzed were either undetected or below the groundwater screening levels at TMW-104B-01. The groundwater analytical results are shown in Table 4.

### **Building 208**

The analytical results for Building 208 are included in Table 3. The soil samples collected were analyzed for TPH, RCRA metals and VOCs. TPH concentrations in all the samples collected were either undetected or below 250 mg/kg.

Arsenic concentrations were higher than the soil screening level of 1.6 mg/kg in all the nine samples collected from Building 208. The concentrations ranged from 3.2 mg/kg in three borings to 4.5 mg/kg in SB-208-01B. However, all of the concentrations were lower than the background level of 10 mg/kg for arsenic in the soil for this area. All the other RCRA metals detected were below the soil screening levels.

There were detections of a few VOCs such as acetone, benzene, hexane, toluene, chloromethane and ethylbenzene in some of the samples; however, these concentrations were below the soil screening levels. All the other VOCs analyzed were below the detection limits.

SB-208-05 was converted to temporary well TMW-208-01 and one groundwater sample was collected for analysis of TPH, RCRA metals and VOCs. Lead was detected above the groundwater screening level of 0.015 mg/L at 0.0462 mg/L in TMW-208-01. The other RCRA metals and VOCs analyzed were either undetected or did not exceed the groundwater screening levels. The groundwater analytical results are shown in Table 4.

### **Building 217**

The analytical results for Building 217 are included in Table 3. The soil samples collected were analyzed for TPH, RCRA metals and VOCs. TPH concentrations in all the samples collected were either undetected or below 250 mg/kg.

Arsenic concentrations were higher than the soil screening level of 1.6 mg/kg in all the nine samples collected from Building 217. The concentrations ranged from 2.7 mg/kg in SB-217-01B to 6.5 mg/kg in SB-217-03B. However, all of the concentrations were lower than the background level of 10 mg/kg for arsenic in the soil for this area. All the other RCRA metals were detected below the soil screening levels.

There were detections of a few VOCs such as acetone, benzene, hexane, toluene, carbon disulfide, chloromethane and ethylbenzene in some of the samples; however, these concentrations were below the soil screening levels. All the other VOCs analyzed were below the detection limits.

SB-217-05 was converted to temporary well TMW-217-01 and one groundwater sample was collected for analysis of TPH, RCRA metals and VOCs. Lead was detected above the groundwater screening level of 0.015 mg/L at 0.0807 mg/L in TMW-217-01. The other RCRA metals and VOCs analyzed were either undetected or did not exceed the groundwater screening levels. The groundwater analytical results are shown in Table 4.

### **Building 219**

The analytical results for Building 219 are included in Table 3. The soil samples collected were analyzed for TPH, RCRA metals and VOCs. TPH concentrations in all the samples collected were either undetected or below 250 mg/kg.

Arsenic concentrations were higher than the soil screening level of 1.6 mg/kg in all the nine samples collected from Building 219. The concentrations ranged from 2.8 mg/kg in SB-219-02A to 5.4 mg/kg in SB-219-04B. However, all of the concentrations were lower than the background level of 10 mg/kg for arsenic in the soil for this area. All the other RCRA metals detected were below the soil screening levels.

There were detections of a few VOCs such as benzene, hexane, toluene, 2-Butanone, chloromethane, dichlorodifluoromethane, 1,1,2 trichloro 1,2,2 trifluoroethane and ethylbenzene in some of the samples; however, these concentrations were below the soil screening levels. All the other VOCs analyzed were below the detection limit.

A groundwater sample was not collected at this location as a temporary monitoring was not installed due to lack of evidence of contamination found in the soil, and borehole collapse.

### Building 302

The analytical results for Building 302 are included in Table 3. The soil samples collected were analyzed for TPH, RCRA metals and VOCs. TPH concentrations in all the samples collected were either undetected or below 250 mg/kg.

Arsenic concentrations were higher than the soil screening level of 1.6 mg/kg in all the nine samples collected from Building 302. The concentrations ranged from 2.4 mg/kg in SB-302-04A to 4.8 mg/kg in SB-302-03B. However, all of the concentrations were lower than the background level of 10 mg/kg for arsenic in the soil for this area. All the other RCRA metals were detected below the soil screening levels.

There were detections of a few VOCs such as benzene, hexane, toluene, 2-Butanone, chloromethane, 1,1,2 trichloro 1,2,2 triflouroethane and carbon disulfide in some of the samples however; these concentrations were below the soil screening levels. All the other VOCs analyzed were below the detection limit. All the other volatile organic compounds analyzed were below the detection limits.

SB-302-05 was converted to temporary well TMW-302-01 and one groundwater sample was collected for analysis of TPH, RCRA metals and VOCs. Lead was detected above the groundwater screening level of 0.015 mg/L at 0.072 mg/L in TMW-302-01. Arsenic concentration (0.013 mg/L) exceeded the groundwater screening levels screening level of 0.01 mg/L. The other RCRA metals and VOCs analyzed were either undetected or did not exceed the groundwater screening levels. The groundwater analytical results are shown in Table 4.

### Building 308

The analytical results for Building 308 are included in Table 3. Samples SB-308-01A through SB-308-05A were analyzed for TPH, RCRA metals and VOCs. Samples SB-308-06A through SB-308-11B were analyzed for TPH, lead and VOCs. TPH concentrations were observed to be higher than 250 mg/kg in the following samples: SB-308-01B, SB-308-02A, SB-308-04B, SB-308-06B, SB-308-08A, SB-308-09A, SB-308-10A, SB-308-10B, and SB-308-11A.

Arsenic concentrations were higher than the soil screening level of 1.6 mg/kg in the following samples: SB-308-01A, SB-308-01B, and SB-308-3B. The concentrations in the samples ranged from nondetects in three borings to 3.2 mg/kg at SB-308-01B and SB-308-03B. However, all of the concentrations were lower than the background level of 10 mg/kg for arsenic in the soil for this area. All the other RCRA metals detected were below the soil screening levels. RCRA metals, except lead, were not analyzed in samples SB-308-06A through SB-308-11B.

Benzene was detected at concentrations exceeding the soil screening level of 0.0055 mg/kg in four samples: SB-308-10A (0.3 mg/kg), SB-308-10B (0.66 mg/kg), SB-308-11A (0.045 mg/kg) and SB-308-11B (0.0061 mg/kg). There were detections of a few VOCs such as hexane, 1,3,5 – trimethylbenzene, total xylenes, and ethylbenzene in some of the samples; however, these concentrations were below the soil screening levels. All the other VOCs analyzed were either undetected or below the soil screening levels.

SB-308-05 was converted to temporary well TMW-308-01 and one groundwater sample was collected for analysis of TPH, RCRA metals and VOCs. The RCRA metals and the VOCs analyzed were either undetected or did not exceed the groundwater screening levels. The groundwater analytical results are shown in Table 4.

#### **Building 314**

The analytical results for Building 314 are included in Table 3. The soil samples collected were analyzed for TPH, RCRA metals and VOCs. TPH concentrations in all the samples collected were either undetected or below 250 mg/kg.

Arsenic concentrations were higher than the soil screening level of 1.6 mg/kg in five of the nine samples collected from Building 314. The concentrations ranged from nondetects in three borings to 3.3 mg/kg in SB-314-01A and SB-314-01B. However, these concentrations were lower than the background level of 10 mg/kg for arsenic in the soil for this area. All the other RCRA metals detected were below the soil screening levels.

There were detections of a few VOCs such as acetone, benzene, toluene, ethylbenzene and 1,1,2 trichloro 1,2,2 triflouoroethane in some of the samples; however, these concentrations were below the soil screening levels. All the other VOCs analyzed were below the detection limits.

SB-314-05 was converted to temporary well TMW-314-01 and one groundwater sample was collected for analysis of TPH, RCRA metals and VOCs. The RCRA metals and VOCs analyzed were either undetected or did not exceed the groundwater screening levels. The groundwater analytical results are shown in Table 4.

#### **Open Drainage Ditches**

##### *Field Methods*

Earth Tech conducted soil sampling at the Open Drainage Ditch locations on November 6 and 7, 2007. DT-01 through DT-17 were located along the ditch trending north-south, DT-18 through DT-22 were located along the ditch trending east-west south of Building 202, DT-23 through DT-25 were located

Mr. Andrew Boettcher  
WDNR  
May 8, 2008  
Page 9

offsite along the ditch trending east-west south of Building 202, DT-26 through DT-37 were located in ditches trending north-south and east-west south and east of the aircraft apron and DT-38 and DT-39 were located in an area southeast of building 220. A total of 39 samples were collected from a depth interval of approximately 0.5 to 1.0 feet using a stainless-steel hand trowel. All soil samples from the ditch locations were screened using a Minirae 2000 PID with readings at background concentrations (0 ppm). The soil samples were analyzed for TPH and polychlorinated biphenyls (PCBs).

### *Analytical Results*

The analytical results for the Open Drainage Ditches are included in Table 5. The samples collected were analyzed for TPH and PCBs. Aroclor-1248 was detected in eight of the thirty nine samples at concentrations ranging from 25 µg/kg in DT-26 to 980 µg/kg in DT-38. However, these concentrations were below the soil screening level of 1400 µg/kg. No other PCB compounds were reported above the detection limits. TPH concentrations were observed to be higher than 250 mg/kg in the following samples: DT-01, DT-02, DT-03, DT-05, DT-06 and DT-09.

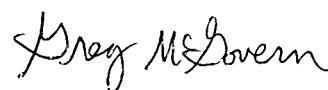

### **Discussion**

Based on the preliminary results of the Phase II Site Investigation conducted in November and December 2007, additional contaminant delineation is being planned by the Air Force at Building 308, Building 104 and at the Open Drainage Ditches. BTEX and TPH was detected above soil screening levels at Building 308. TPH was detected above soil screening levels in the Open Drainage Ditches. Benzene and vinyl chloride were detected above groundwater screening levels in the temporary monitoring well installed at Building 104.

If you have any questions or concerns, please call Greg McGovern at 312-777-5432.

# EPA Region III RBC Table 4/6/2007- Soil Industrial Screening levels in mg/kg

Bold font indicates target analytes with method detection limits that exceed screening criteria. Please note that PALs are 1/10 the Ch. NR 140.05 clean-up criteria and most method detection limits are less than Ch. NR 140.05 clean-up criteria.

Bold circled values indicate exceedence above the screening level

NA: No Screening criteria available

J: Estimated value

F: Detected below the reporting limit

U: Not detected, value reported is the reporting limit

J: Result is estimated.

M: Estimated: The concentration is estimated due to matrix effects.

R: Rejected

Notes:

\*Ch. NR 140.05 Preventative Action Limit (PAL)

\*\*Ch. NR 720 Soil Cleanup Standards, Wisconsin Department of Natural Resources

# EPA Region III RBC Table 4/6 2007 - Soil Industrial Screening levels

Bold font indicates target analytes with method detection limits that exceed screening

1/10 the Ch. NR 140.05 clean-up criteria and most method detection limits are less than 1/10 the Ch. NR 140.05 clean-up criteria.

Bold circled values indicate exceedance above the screening level

NA: No Screening criteria available

J: Estimated value

F: Detected below the reporting limit

U: Not detected, value reported is the reporting limit.

J: Result is estimated.

M: Estimated: The concentration is estimated due to matrix effects.

R: Rejected
