Subject: **Progress Report: June 2017**
Wagner Oil Spill – March 12, 2016
Hwy. 45 – Rolling Township, Langlade County, Wisconsin
DNR BRRTS No. 02-34-577387
Meridian No. 05C817

Dear John:

This letter describes work completed to date in response to the above referenced spill.

This work included:

- Installing a monitoring well network
- Ground water sampling

The results of the sampling indicate the extent of impacts to the soil and ground water is defined. The ground water contaminant plume appears to be stable and receding. Based on these results, we recommend two more rounds of ground water sampling. If the results continue to support a stable and/or receding plume, we will evaluate this site for Closure with GIS Registry for Soil and Ground Water.

BACKGROUND INFORMATION

Please refer to file reports for detailed background information. A brief summary is provided below.

The spill occurred March 12, 2016 on Hwy. 45 near Aniwa, Wisconsin (Figures 1 and 2). An estimated 1787 gallons of gasoline spilled onto the roadway and flowed easterly onto the shoulder and ditch.

Cleanup included using absorbent pads and booms (29 drums), vacuum truck(s) (14,800 gallons of gasoline/water mixture), and soil excavation (670.18 tons).

An estimated 1500 gallons (or more) of product was recovered in the initial emergency response action. Additionally, a significant portion of the unrecovered product likely evaporated over time (especially during the hot summer months).

REMEDIAL INVESTIGATION

Soil Borings – May 25, 2016

Seventeen soil borings (B1 through B17) were installed in the locations shown on Figure 3. The boring depths ranged from 8 to 12 ft below grade. Soil samples were collected from the borings and analyzed for PVOC+Naphthalene. The results are summarized in Table 1.

Ground water samples were collected from several soil borings; the results are summarized in Table 2.

Temporary Monitoring Wells – May 25, 2016

Five temporary monitoring wells (1-inch dia) (TMW-1 thru TMW-5) were installed in the locations shown on Figure 3. The wells were screened across the water table with 5 ft screens. Ground water samples were collected from these wells; the results are summarized in Table 2.

Monitoring Wells – August 10, 2016 and November 14, 2016

Monitoring wells MW-1, MW-2, and MW-3 were installed August 10, 2016 in the locations shown on Figure 3. Monitoring wells MW-4, MW-5, MW-6 were installed November 14, 2016.

Ground Water Sampling

Ground water samples were collected August 29, November 30, 2016 and March 29, 2017. The analytical reports are provided in Appendix A and summarized in Table 2.

The depth to ground water was measured in each well prior to sampling (Table 3).

Natural attenuation parameters were measured in the field during each sampling event (Table 4).

DATA EVALUATION

Setting

The site is located in a rural area of Langlade County. The area is forested. The spill occurred in a topographic swale with surface water flow to the south/southeast. The remedial excavation created a shallow pond (approximately 1 foot depth).

The nearest residences are located over ¼ mile away.

Hydrogeology

The site is underlain by heterogeneous glacial deposits consisting of sand, gravel, clay, and silt with large boulders. Bedrock (described as ‘granite’ in area well logs) is typically encountered in area wells about 50 feet below grade.

The soil borings encountered silty sands with some coarser sand, gravel, and large boulders (Figure 4). Ground water flow appears to be southerly (Figure 5).

Impacted Soil

The soil borings and soil samples defined the extent of impacted soil. There was residual soil contamination around the perimeter and floor of the excavated area. These impacts will naturally attenuate and do not require further investigation and remediation.

No further action is recommended with respect to soil impacts.

Extent of Impacted Ground Water

The analytical data and ground water flow measurements indicate the extent of impacted ground water is as shown in Figure 6.

Environmental Risk Analysis

The primary environmental risks at this site are surface water and potential impacts to nearby potable wells. Based on the water sample from the pond (Table 2), the initial remedial actions appear to have removed shallow petroleum impacts which present a threat to surface water. No further action is recommended with respect to surface water.

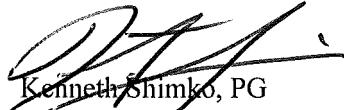

Private wells are located about $\frac{1}{4}$ mile from the site. Petroleum impacts are not expected to travel that distance. A sample of the well water from the property owner (Pat Stone) was collected March 29, 2017. No impacts were measured in this water sample (Table 2).

RECOMMENDATIONS

The soil and ground water sampling data indicate the extent of impacts are defined. The ground water contaminant plume appears to be stable and receding. We recommend two more sampling events (all wells and the pond). If the results continue to demonstrate a stable plume, the site will be evaluated for Closure with GIS Registry for Soil and Ground Water.

Sincerely,

MERIDIAN ENVIRONMENTAL CONSULTING, LLC

Kenneth Shimko, PG
Project Manager

RE: Project: WAGNER
Pace Project No.: 40142863

Dear Kenneth Shimko:

Enclosed are the analytical results for sample(s) received by the laboratory on December 02, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brian Basten

PROJECT NARRATIVE

Project: WAGNER
Pace Project No.: 40142863

Method: WI MOD GRO
Description: WIGRO GCV
Client: Meridian Environmental Consulting, LLC
Date: December 06, 2016

General Information:

12 samples were analyzed for WI MOD GRO. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 243168

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40142863007

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MSD (Lab ID: 1440944)
- Benzene

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: WAGNER
Pace Project No.: 40142863

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

ANALYTE QUALIFIERS

F1 The sample was analyzed at a dilution due to foaming of the sample in the purge vessel.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: WAGNER
Pace Project No.: 40147511

Dear Kenneth Shimko:

Enclosed are the analytical results for sample(s) received by the laboratory on March 31, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brian Basten

PROJECT NARRATIVE

Project: WAGNER
Pace Project No.: 40147511

Method: WI MOD GRO
Description: WIGRO GCV
Client: Meridian Environmental Consulting, LLC
Date: April 05, 2017

General Information:

12 samples were analyzed for WI MOD GRO. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: WAGNER
Pace Project No.: 40147511

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD .

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay
