Attachments: proposed_additional_wells_map_Map_nov2018_rp.pdf

Tauren,

Please find attached the proposed monitoring well locations for additional delineation of the detection of TCE at monitoring well MW-23S. ERM proposes to completed these wells using the methods as previously specified in the Offsite Investigation Work Plan dated November 2017. The summary of work includes:

- Two soil samples will be collected from the unsaturated interval at each well location.
- Monitoring wells will be installed to approximately 25 feet below ground surface.
- Monitoring wells will be developed and sampled.
- The monitoring well locations and top of casing elevations will be surveyed.

Again, the above work will be performed consistent with the details as presented in the Offsite Investigation Work Plan dated November 2017.

Please let me know if you need any additional information.

Regards,

David
