Subject: Site Investigation Workplan Notice to Proceed for Hamilton Industries Site (Former), BRRTS # 02-36-578316
Date: Thursday, September 23, 2021 10:48:00 AM

Good morning David,

This email acts as the notice to proceed with the workplan. I only have a couple comments in regard to the workplan:

- For the 0-4ft interval for soil sampling for PAHs and PCBs: If there are no field indications (staining, PID response, odor, etc.) noted in the top four feet of soil, then the sample collection within that interval should be collected within the top 0-2' as that would likely be the most indicative area of a release if the contaminants penetrated through the former floors of the buildings on-site.
- Based on my phone discussion with you, it is my understanding that the evaluation of sediment and surface water will be completed after this additional sampling has been done to provide a more comprehensive evaluation.

As with any site investigation, it is iterative and based on data collected; therefore, depending on the results, additional investigation may be warranted.

If you have any questions, please feel free to contact me.

Regards,

We are committed to service excellence.

Visit our survey at <http://dnr.wi.gov/customersurvey> to evaluate how I did.
