Subject: RE: Proposed Well Locations - Former Hamilton Industries Site - BRRTS# 0236578316

Good morning David,

As we discussed yesterday, the proposed locations are to try to delineate the PFAS contamination in groundwater. Based on the results, additional locations may be needed.

Regards,
Tauren

Tauren,

Per our discussion earlier today, ERM is planning on proceeding with installation of the proposed monitoring wells at the locations provided on the Figure. Please let me know if you have any objections to those locations.

David

Subject: Proposed Well Locations - Former Hamilton Industries Site - BRRTS# 0236578316

Mr. Beggs,

Please find the attached map of proposed monitoring well locations to further investigate the extent of PFAS at the former Hamilton Industries site (Site) in Two Rivers, WI (BRRTS # 0236578316) as requested by WDNR in email communications on October 9, 2023. The proposed monitoring well locations are proposed to be screened across the shallow groundwater (~20-25 ft total depth with 10 foot screens) and were selected to delineate to the north, west, and south of the Site. Further, the proposed well locations are on properties owned by the City of Two Rivers, where access has been agreed.

Well installation and development will be performed in accordance with the methods as presented in the Offsite Investigation Work Plan dated November 2017.

Sampling for PFAS will be done in accordance with the methods as presented in the 2021 Work Plan Addendum – Additional Groundwater and Soil Investigation dated September 10, 2021.

Please provide email approval of the proposed locations.
