

**Memo**

To Tauren Beggs

From David de Courcy-Bower and Andrew Roberts

Date 1 May 2024

Reference 0383990

Subject Off-Site Evaluation of Polyfluorinated Alkyl Substances (PFAS)
Former Hamilton Industries Property, Two Rivers, Wisconsin
BRRTS Activity #02-36-578316

Dear Mr. Beggs,

This memorandum has been prepared to provide the Wisconsin Department of Natural Resources (WDNR) further evaluation of polyfluorinated alkyl substances (PFAS) offsite and upgradient at the Former Hamilton Industries Property located in Two Rivers, Wisconsin, BRRTS Activity #02-36-578316 (Site).

Background

In June 2023, ERM collected additional groundwater samples at the Site for PFAS analysis as requested by the WDNR in the Technical Assistance Review letter dated May 4, 2022. ERM submitted the *Groundwater Analytical Results for Polyfluorinated Alkyl Substances (PFAS) Former Hamilton Industries Property, Two Rivers, Wisconsin BRRTS Activity #02-36-578316* memorandum to WDNR on August 24, 2023 summarizing the results of the June 2023 PFAS groundwater sampling event and requested concurrence that the nature and extent of PFAS at the Site has been sufficiently delineated for the purposes of Site Investigation. In their October 9th, 2023 email in response to that memorandum, the WDNR stated that, "The Site investigation for PFAS is not complete. Additional investigation off-Site is needed to define degree and extent."

ERM submitted a work plan by email to the WDNR on March 6, 2024 to conduct additional PFAS sampling in off-Site groundwater. This memorandum summarizes and discusses the results of the off-Site PFAS groundwater investigation.

Offsite PFAS Evaluation

ERM completed the following tasks to further evaluate the presence of PFAS in offsite groundwater upgradient of the Site:

1. An access agreement between the City of Two Rivers and ERM was obtained for the off-Site monitoring wells. Locations were selected to minimize the potential for damage to subsurface utilities and to provide safe access for sampling purposes.
2. Three offsite shallow groundwater monitoring wells were installed either upgradient or side gradient of the current /well network. As stated in the email work plan dated March 6,

2024, the monitoring wells were installed and developed in accordance with the methods as presented in the *Offsite Investigation Work Plan* dated November 2017. Groundwater samples for PFAS analysis were collected in accordance with the *2021 Work Plan Addendum – Additional Groundwater and Soil Investigation* dated September 10, 2021.

3. Updated the groundwater concentration contour plots for PFAS constituents that exceed either of the proposed ch. NR140 preventive action limit (PAL) or enforcement standard (ES).

PFAS Compound Distribution in Groundwater

In March 2024, ERM sampled three off-Site groundwater monitoring wells for PFAS. The samples were submitted to Pace Analytical for analysis of PFAS compounds. Groundwater analytical results were compared to the proposed PAL or ES. Table 1 presents the proposed PAL and ES, a summary of the March 2024 analytical results for the off-Site wells, and provides an expanded description of the acronyms. Laboratory analytical results are provided as Attachment A.

As shown on Table 1, PFHxS, PFOS, PFOA, and the total combined FOSA, NEtFOSE, NETFOSA, NEtFOSAA, PFOS, and PFOA were detected in off-Site groundwater at concentrations that exceeded a proposed PAL or ES. Groundwater concentration plots for each of the compounds were developed and are provided as Figures 1 through 4. Figures 1 through 4 also include results of the June 2023 groundwater sampling event at the Site to provide context for the off-Site concentrations and to understand the nature and extent of PFAS in the vicinity of the Site. Discussion of the June 2023 results and summary analytical tables were provided in the *Groundwater Analytical Results for Polyfluorinated Alkyl Substances (PFAS) Former Hamilton Industries Property, Two Rivers, Wisconsin BRRTS Activity #02-36-578316 memorandum*, submitted to WDNR on August 24, 2023.

PFHxS

The extent of PFHxS in groundwater is shown on Figure 1. The only new off-Site location where PFHxS exceeded the proposed PAL of 4 ng/l was at MW-32S located to the northeast of the Site on a former industrial property, at the southeast corner of 20th Street and East River Street. The only proposed ES exceedance is located downgradient of a former Industrial property located to the south of the Site. The extent of PFHxS above the PAL is fully delineated on the Site. The detection of PFAS in MW-32S may be attributed to co-mingled plumes associated with the former industrial property as it is located side gradient of the Site.

PFOS

The extent of PFOS in groundwater is shown on Figure 2. The only new off-Site location where PFOS exceeded the proposed PAL of 2 ng/l was at MW-34S located off-Site to the west of the Site, at the northwest corner of 17th Street and East Park Street in Two Rivers Public Square. There are no exceedances of the proposed ES for PFOS on the Site or off-Site. MW-34S is located hydraulically up-gradient of the Site and concentrations of PFOS in MW-34S are delineated to the east towards the Site. The extent of PFOS on-Site is fully delineated.

PFOA

The extent of PFOA in groundwater is shown on Figure 3. PFOA concentrations were detected above the proposed ES of 20 ng/L at MW-33S located off-Site to the southwest of the Site, near the intersection of East River Street and Washington Street, and at MW-34S located off-Site to the west of the Site, at the northwest corner of 17th Street and East Park Street. PFOA concentrations were detected above the proposed PAL of 2 ng/L at MW-32S located off-Site to the northeast of the Site, at the southeast corner of 20th Street and East River Street.

Concentrations of PFOA in groundwater were detected above the ES to the west and southwest of the Site, and above the PAL to the north. The second highest concentration of PFOA detected in shallow groundwater both on-Site and off-Site was at MW-33S located to the southwest of the Site, and concentrations are lower in the southern portion of the Site than at MW-33S. The presence of PFOA above the ES in shallow groundwater both upgradient and side gradient of the Site indicates there may be comingled plumes associated with other sources in the vicinity of the Site.

Combined FOSA, NEtFOSE, NetFOSA, NEtFOSAA, PFOS, and PFOA

The extent of combined FOSA, NEtFOSE, NetFOSA, NEtFOSAA, PFOS, and PFOA (Sum PFAS) in groundwater is shown on Figure 4. Sum PFAS concentrations were detected above the proposed ES of 20 ng/L at all three off-Site locations.

Concentrations of Sum PFAS in groundwater were detected above the ES to the north, west and southwest of the Site. The third highest concentration of Sum PFAS detected in shallow groundwater both on-Site and off-Site was at MW-33S located to the southwest of the Site, and concentrations are lower in the southern portion of the Site than at MW-33S. The presence of Sum PFAS above the ES in shallow groundwater both upgradient and side gradient of the Site indicates there may be comingled plumes associated with other sources in the vicinity of the Site.

Discussion

This memorandum was prepared understanding the context that PFAS are considered emerging contaminants that can pose a risk to human health and the environment. However, the regulation and technical understanding of PFAS compounds continues to evolve. The evaluation of PFAS off-site Site was performed based on current guidance from the WDNR and DHS and used both the WAC NR 809 MCLs and proposed NR 140 PAL and ES as references for understanding the risks to human health and the environment at the Site.

The March 2024 off-Site groundwater sampling event identified exceedances of the proposed ES for Sum PFAS at the three new off-Site locations. It is further recognized that combined PFOA/PFOS were detected at MW-33S at a concentration of 70.2 ng/L, exceeding the drinking water NR 809 MCL of 70 ng/l.

Installation and sampling of the three new off-Site monitoring wells sampled in March 2024 indicate that PFAS concentrations off-Site may be attributed to other off-Site sources. Figures 1 through 4 show off-Site properties with either former or current industrial zoning located to the

south, southwest, west, and northeast of the Site. These industrially zoned properties may represent potential sources of historic PFAS usage contributing to potentially comingled plumes.

Recommendations

Based on the finding of this data review, WDNR concurrence with the following is requested:

- 1) The nature and extent of PFAS located off-Site could be from co-mingled plumes from former industrial properties.
- 2) The nature and extent of PFAS at the Site has been sufficiently delineated for the purposes of Site Investigation.
- 3) The presence of PFAS in groundwater at the Site at concentrations that exceed the proposed PAL, proposed ES, and the NR 809 MCL can be managed with a groundwater use restriction for the Site and no active remediation or further groundwater sampling for PFAS is required.

Please let us know if you would like to schedule a time to discuss the findings of this memorandum.

RE: Project: 0383990 TWO RIVERS
Pace Project No.: 40276083

Dear Ryan Plath:

Enclosed are the analytical results for sample(s) received by the laboratory on March 28, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Baton Rouge

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: 0383990 TWO RIVERS

Pace Project No.: 40276083

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - The reported result is an estimated value.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

DL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Analyte was not detected and is reported as less than the LOD or as defined by the customer.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 40276083004

- [1] For method EPA 537 Mod, extraction batch 324591 was not extracted with a low-level LCS per Wisconsin requirements.
There was no additional sample available for re-extraction.

Sample: 40276083005

- [1] For method EPA 537 Mod, extraction batch 324591 was not extracted with a low-level LCS per Wisconsin requirements.
There was no additional sample available for re-extraction.

ANALYTE QUALIFIERS

- B Analyte was detected in the associated method blank.
- IO The internal standard response was outside the laboratory acceptance limits confirmed by reanalysis. The results reported are from the most QC compliant analysis.
- IR The internal standard recovery associated with this sample exceeds the upper control limit. The reported results should be considered an estimated value.
- IS The internal standard response is below criteria. Results may be biased high.
- N2 The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
