

Notice: Use this form to request a **written response (on agency letterhead)** from the Department of Natural Resources (DNR) regarding technical assistance, a post-closure change to a site, a specialized agreement or liability clarification for Property with known or suspected environmental contamination. A fee will be required as is authorized by s. 292.55, Wis. Stats., and NR 749, Wis. Adm. Code., unless noted in the instructions below. Personal information collected will be used for administrative purposes and may be provided to requesters to the extent required by Wisconsin's Open Records law [ss. 19.31 - 19.39, Wis. Stats.].

Definitions

"Property" refers to the subject Property that is perceived to have been or has been impacted by the discharge of hazardous substances.

"Liability Clarification" refers to a written determination by the Department provided in response to a request made on this form. The response clarifies whether a person is or may become liable for the environmental contamination of a Property, as provided in s. 292.55, Wis. Stats.

"Technical Assistance" refers to the Department's assistance or comments on the planning and implementation of an environmental investigation or environmental cleanup on a Property in response to a request made on this form as provided in s. 292.55, Wis. Stats.

"Post-closure modification" refers to changes to Property boundaries and/or continuing obligations for Properties or sites that received closure letters for which continuing obligations have been applied or where contamination remains. Many, but not all, of these sites are included on the GIS Registry layer of RR Sites Map to provide public notice of residual contamination and continuing obligations.

Select the Correct Form

This form should be used to request the following from the DNR:

- Technical Assistance
- Liability Clarification
- Post-Closure Modifications
- Specialized Agreements (tax cancellation, negotiated agreements, etc.)

Do not use this form if one of the following applies:

- Request for an **off-site liability exemption or clarification** for Property that has been or is perceived to be contaminated by one or more hazardous substances that originated on another Property containing the source of the contamination. Use DNR's Off-Site Liability Exemption and Liability Clarification Application Form 4400-201.
- Submittal of an Environmental Assessment for the **Lender Liability Exemption**, s 292.21, Wis. Stats., **if no response or review by DNR is requested**. Use the Lender Liability Exemption Environmental Assessment Tracking Form 4400-196.
- Request for an **exemption to develop on a historic fill site** or licensed landfill. Use DNR's Form 4400-226 or 4400-226A.
- **Request for closure** for Property where the investigation and cleanup actions are completed. Use DNR's Case Closure - GIS Registry Form 4400-202.

All forms, publications and additional information are available on the internet at: dnr.wi.gov/topic/Brownfields/Pubs.html.

Instructions

1. Complete sections 1, 2, 6 and 7 for all requests. Be sure to provide adequate and complete information.
2. Select the type of assistance requested: Section 3 for technical assistance or post-closure modifications, Section 4 for a written determination or clarification of environmental liabilities; or Section 5 for a specialized agreement.
3. Include the fee payment that is listed in Section 3, 4, or 5, unless you are a "Voluntary Party" enrolled in the Voluntary Party Liability Exemption Program and the questions in Section 2 direct otherwise. Information on to whom and where to send the fee is found in Section 8 of this form.
4. Send the completed request, supporting materials and the fee to the appropriate DNR regional office where the Property is located. See the map on the last page of this form. A paper copy of the signed form and all reports and supporting materials shall be sent with an electronic copy of the form and supporting materials on a compact disk. For electronic document submittal requirements see: <http://dnr.wi.gov/files/PDF/pubs/rr/RR690.pdf>

The time required for DNR's determination varies depending on the complexity of the site, and the clarity and completeness of the request and supporting documentation.

Technical Assistance, Environmental Liability Clarification or Post-Closure Modification Request

Form 4400-237 (R 9/15)

Page 2 of 8

Section 1. Contact and Recipient Information

Requester Information

This is the person requesting technical assistance or a post-closure modification review, that his or her liability be clarified or a specialized agreement and is identified as the requester in Section 7. DNR will address its response letter to this person.

Last Name Meyers	First Tom	MI	Organization/ Business Name Phillips Edison & Company
Mailing Address 11501 Northlake Drive			City Cincinnati
			State OH
			ZIP Code 45249
Phone # (include area code) (513) 554-1110		Fax # (include area code)	Email tmeyers@PHILLIPSEDISON.com

The requester listed above: (select all that apply)

- Is currently the owner
 Is considering selling the Property
 Is renting or leasing the Property
 Is considering acquiring the Property
 Is a lender with a mortgagee interest in the Property
 Other. Explain the status of the Property with respect to the applicant:

**Technical Assistance, Environmental Liability
Clarification or Post-Closure Modification Request**

Form 4400-237 (R 9/15)

Page 3 of 8

1. Is a response needed by a specific date? (e.g., Property closing date) Note: Most requests are completed within 60 days. Please plan accordingly.

- No Yes

Date requested by: _____

Reason:

2. Is the "Requester" enrolled as a Voluntary Party in the Voluntary Party Liability Exemption (VPLE) program?

- No. **Include the fee that is required for your request in Section 3, 4 or 5.**
 Yes. **Do not include a separate fee.** This request will be billed separately through the VPLE Program.

Fill out the information in Section 3, 4 or 5 which corresponds with the type of request:

Section 3. Technical Assistance or Post-Closure Modifications;

Section 4. Liability Clarification; or Section 5. Specialized Agreement.

Section 3. Request for Technical Assistance or Post-Closure Modification

Select the type of technical assistance requested: [Numbers in brackets are for WI DNR Use]

- No Further Action Letter (NFA) (Immediate Actions) - NR 708.09, [183] - **Include a fee of \$350.** Use for a written response to an immediate action after a discharge of a hazardous substance occurs. Generally, these are for a one-time spill event.
- Review of Site Investigation Work Plan - NR 716.09, [135] - **Include a fee of \$700.**
- Review of Site Investigation Report - NR 716.15, [137] - **Include a fee of \$1050.**
- Approval of a Site-Specific Soil Cleanup Standard - NR 720.10 or 12, [67] - **Include a fee of \$1050.**
- Review of a Remedial Action Options Report - NR 722.13, [143] - **Include a fee of \$1050.**
- Review of a Remedial Action Design Report - NR 724.09, [148] - **Include a fee of \$1050.**
- Review of a Remedial Action Documentation Report - NR 724.15, [152] - **Include a fee of \$350**
- Review of a Long-term Monitoring Plan - NR 724.17, [25] - **Include a fee of \$425.**
- Review of an Operation and Maintenance Plan - NR 724.13, [192] - **Include a fee of \$425.**

Other Technical Assistance - s. 292.55, Wis. Stats. [97] (For request to build on an abandoned landfill use Form 4400-226)

- Schedule a Technical Assistance Meeting - **Include a fee of \$700.**
- Hazardous Waste Determination - **Include a fee of \$700.**
- Other Technical Assistance - **Include a fee of \$700.** Explain your request in an attachment.

Post-Closure Modifications - NR 727, [181]

- Post-Closure Modifications: Modification to Property boundaries and/or continuing obligations of a closed site or Property; sites may be on the GIS Registry. This also includes removal of a site or Property from the GIS Registry. **Include a fee of \$1050, and:**
- Include a fee of \$300 for sites with residual soil contamination; and
- Include a fee of \$350 for sites with residual groundwater contamination, monitoring wells or for vapor intrusion continuing obligations.

Attach a description of the changes you are proposing, and documentation as to why the changes are needed (if the change to a Property, site or continuing obligation will result in revised maps, maintenance plans or photographs, those documents may be submitted later in the approval process, on a case-by-case basis).

Skip Sections 4 and 5 if the technical assistance you are requesting is listed above and complete Sections 6 and 7 of this form.

Technical Assistance, Environmental Liability
Clarification or Post-Closure Modification Request

Form 4400-237 (R 9/15)

Page 4 of 8

Section 4. Request for Liability Clarification

Select the type of liability clarification requested. Use the available space given or attach information, explanations, or specific questions that you need answered in DNR's reply. Complete Sections 6 and 7 of this form. **[Numbers in brackets are for DNR Use]**

"Lender" liability exemption clarification - s. 292.21, Wis. Stats. [686]

❖ **Include a fee of \$700.**

Provide the following documentation:

- (1) ownership status of the real Property, and/or the personal Property and fixtures;
- (2) an environmental assessment, in accordance with s. 292.21, Wis. Stats.;
- (3) the date the environmental assessment was conducted by the lender;
- (4) the date of the Property acquisition; for foreclosure actions, include a copy of the signed and dated court order confirming the sheriff's sale.
- (5) documentation showing how the Property was acquired and the steps followed under the appropriate state statutes.
- (6) a copy of the Property deed with the correct legal description; and,
- (7) the Lender Liability Exemption Environmental Assessment Tracking Form (Form 4400-196).
- (8) If no sampling was done, please provide reasoning as to why it was **not** conducted. Include this either in the accompanying environmental assessment or as an attachment to this form, and cite language in s. 292.21(1)(c)2.,h.-i., Wis. Stats.:
 - h. The collection and analysis of representative samples of soil or other materials in the ground that are suspected of being contaminated based on observations made during a visual inspection of the real Property or based on aerial photographs, or other information available to the lender, including stained or discolored soil or other materials in the ground and including soil or materials in the ground in areas with dead or distressed vegetation. The collection and analysis shall identify contaminants in the soil or other materials in the ground and shall quantify concentrations.
 - i. The collection and analysis of representative samples of unknown wastes or potentially hazardous substances found on the real Property and the determination of concentrations of hazardous waste and hazardous substances found in tanks, drums or other containers or in piles or lagoons on the real Property.

"Representative" liability exemption clarification (e.g. trustees, receivers, etc.) - s. 292.21, Wis. Stats. [686]

❖ **Include a fee of \$700.**

Provide the following documentation:

- (1) ownership status of the Property;
- (2) the date of Property acquisition by the representative;
- (3) the means by which the Property was acquired;
- (4) documentation that the representative has no beneficial interest in any entity that owns, possesses, or controls the Property;
- (5) documentation that the representative has not caused any discharge of a hazardous substance on the Property; and
- (6) a copy of the Property deed with the correct legal description.

Clarification of local governmental unit (LGU) liability exemption at sites with: (select all that apply)

- hazardous substances spills - s. 292.11(9)(e), Wis. Stats. [649];
- Perceived environmental contamination - [649];
- hazardous waste - s. 292.24 (2), Wis. Stats. [649]; and/or
- solid waste - s. 292.23 (2), Wis. Stats. [649].

❖ **Include a fee of \$700, a summary of the environmental liability clarification being requested, and the following:**

- (1) clear supporting documentation showing the acquisition method used, and the steps followed under the appropriate state statute(s).
- (2) current and proposed ownership status of the Property;
- (3) date and means by which the Property was acquired by the LGU, where applicable;
- (4) a map and the ¼, ¼ section location of the Property;
- (5) summary of current uses of the Property;
- (6) intended or potential use(s) of the Property;
- (7) descriptions of other investigations that have taken place on the Property; and
- (8) (for solid waste clarifications) a summary of the license history of the facility.

Section 4. Request for Liability Clarification (cont.)

Lease liability clarification - s. 292.55, Wis. Stats. [646]

❖ **Include a fee of \$700 for a single Property, or \$1400 for multiple Properties and the information listed below:**

- (1) a copy of the proposed lease;
- (2) the name of the current owner of the Property and the person who will lease the Property;
- (3) a description of the lease holder's association with any persons who have possession, control, or caused a discharge of a hazardous substance on the Property;
- (4) map(s) showing the Property location and any suspected or known sources of contamination detected on the Property;
- (5) a description of the intended use of the Property by the lease holder, with reference to the maps to indicate which areas will be used. Explain how the use will not interfere with any future investigation or cleanup at the Property; and
- (6) all reports or investigations (e.g. Phase I and Phase II Environmental Assessments and/or Site Investigation Reports conducted under s. NR 716, Wis. Adm. Code) that identify areas of the Property where a discharge has occurred.

General or other environmental liability clarification - s. 292.55, Wis. Stats. [682] - Explain your request below.

❖ **Include a fee of \$700 and an adequate summary of relevant environmental work to date.**

No Action Required (NAR) - NR 716.05, [682]

❖ **Include a fee of \$700.**

Use where an environmental discharge has or has not occurred, and applicant wants a DNR determination that no further assessment or clean-up work is required. Usually this is requested after a Phase I and Phase II environmental assessment has been conducted; the assessment reports should be submitted with this form. This is not a closure letter.

Clarify the liability associated with a "closed" Property - s. 292.55, Wis. Stats. [682]

❖ **Include a fee of \$700.**

- Include a copy of any closure documents if a state agency other than DNR approved the closure.

Use this space or attach additional sheets to provide necessary information, explanations or specific questions to be answered by the DNR.

**Technical Assistance, Environmental Liability
Clarification or Post-Closure Modification Request**

Form 4400-237 (R 9/15)

Page 6 of 8

Section 5. Request for a Specialized Agreement

Select the type of agreement needed. Include the appropriate draft agreements and supporting materials. Complete Sections 6 and 7 of this form. More information and model draft agreements are available at: dnr.wi.gov/topic/Brownfields/lgu.html#tabx4.

Tax cancellation agreement - s. 75.105(2)(d), Wis. Stats. [654]

❖ **Include a fee of \$700, and the information listed below:**

- (1) Phase I and II Environmental Site Assessment Reports,
- (2) a copy of the Property deed with the correct legal description; and,
- (3) a draft 75.105 agreement based on the DNR's model (dnr.wi.gov/topic/brownfields/documents/mod75-105agrmt.pdf).

Agreement for assignment of tax foreclosure judgement - s.75.106, Wis. Stats. [666]

❖ **Include a fee of \$700, and the information listed below:**

- (1) Phase I and II Environmental Site Assessment Reports,
- (2) a copy of the Property deed with the correct legal description; and,
- (3) a draft 75.105 agreement based on the DNR's model (dnr.wi.gov/topic/brownfields/documents/mod75-106agrmt.pdf).

Negotiated agreement - Enforceable contract for non-emergency remediation - s. 292.11(7)(d) and (e), Wis. Stats. [630]

❖ **Include a fee of \$1400, and the information listed below:**

- (1) a draft schedule for remediation; and,
- (2) the name, mailing address, phone and email for each party to the agreement.

Section 6. Other Information Submitted

Identify all materials that are included with this request.

Include one copy of any document from any state agency files that you want the Department to review as part of this request. The person submitting this request is responsible for contacting other state agencies to obtain appropriate reports or information.

Phase I Environmental Site Assessment Report - Date: _____

Phase II Environmental Site Assessment Report - Date: _____

Legal Description of Property (required for all liability requests and specialized agreements)

Map of the Property (required for all liability requests and specialized agreements)

Analytical results of the following sampled media: Select all that apply and include date of collection.

Groundwater Soil Sediment Other medium - Describe: _____

Date of Collection: _____

A copy of the closure letter and submittal materials

Draft tax cancellation agreement

Draft agreement for assignment of tax foreclosure judgment

Other report(s) or information - Describe: _____

For Property with newly identified discharges of hazardous substances only: Has a notification of a discharge of a hazardous substance been sent to the DNR as required by s. NR 706.05(1)(b), Wis. Adm. Code?

Yes - Date (if known): _____

No

Note: The Notification for Hazardous Substance Discharge (non-emergency) form is available at:

Greentree Cleaners Tenant Space, Greentree Centre
5131 Douglas Avenue, Unit D, Racine, Wisconsin
Wisconsin DNR Facility Identification #252138700
Wisconsin DNR BRRTS Activity #02-52-579863

Dear Ms. Laube-Anderson:

Greentree Station LLC retained Apex to prepare this Remedial Action Options and Design Report for the dry cleaner tenant space at 5131 Douglas Avenue, Unit D (Site). This tenant space is located within Greentree Station LLC's Greentree Centre, a retail strip mall located at 5055 & 5111-5141 Douglas Avenue in Racine, Racine County, Wisconsin.

Historical records show dry cleaning operations have been conducted in the tenant space from 1991 to present. Soil, groundwater and soil-gas testing was conducted to assess the nature and extent of volatile organic compounds (VOCs) impacts near the tenant space.

Enclosed is Apex's Remedial Action Options and Design Report. Greentree Station LLC is requesting the Wisconsin DNR to review the attached report. Enclosed is Form 4400-237 and a check for \$1,050.

If you have any questions regarding our findings, please contact Steve Newlin at (847) 956-8589 x3210. Thank you for attention to this matter.

Respectfully Submitted,
Apex Companies, LLC

**REMEDIAL ACTION OPTIONS AND DESIGN REPORT
GREENTREE CLEANERS TENANT SPACE, GREENTREE CENTRE
5131 DOUGLAS AVENUE
RACINE, RACINE COUNTY, WISCONSIN**

1.0 BACKGROUND

Greentree Station LLC (Client) acquired a retail strip mall located at 5055 & 5111-5141 Douglas Avenue in Racine, Racine County, Wisconsin (the Parent Tract) from IRC Greentree, L.L.C in May 2017. The general vicinity of the Parent Tract is shown in **Figure 1**.

Prior to acquiring the Parent Tract, Client retained Apex Companies, LLC (Apex) to conduct a Phase I Environmental Site Assessment (ESA) at the Greentree Centre. The Phase I ESA identified one recognized environmental condition (REC), use of dry cleaning solvents in a tenant space currently occupied by Greentree Cleaners (Site). The findings of the Phase I ESA were presented in Apex's report dated November 15, 2016.

Client subsequently retained Apex to conduct a Site Investigation at the dry cleaner tenant space at 5131 Douglas Avenue, Unit D (Site). The scope of work for the subsurface investigation was described in Apex's report dated October 24, 2017.

1.1 Site Description

The Site is a dry cleaner tenant space located at 5131 Douglas Avenue, Unit D. The Site is within the Client's Greentree Centre, a retail strip mall located at 5055 & 5111-5141 Douglas Avenue in Racine, Racine County, Wisconsin (Parent Tract).

The Parent Tract occupies approximately 9-acres and is developed with three single-story masonry buildings with slab-on-grade floors (no basements) and asphalt pavement as shown in **Figure 2**. The Site is approximately 1,800 square feet and includes a closed loop dry cleaning plant, located near the central portion of the Parent Tract as shown in **Figure 3**. Photographs of the Site are included in **Appendix A**.

1.2 Site History

Based on review of historical sources, the Parent Tract was undeveloped or used for agricultural fields from 1891 until the mid-1980s. In 1955, a residential property is depicted on the southwest corner of the Parent Tract. By 1986, the Parent Tract had been cleared of vegetation and graded for construction. The main anchor tenant building of the Parent Tract is depicted as developed in the early-1990s. By 2000, the vacant outparcel buildings are depicted as developed. Surrounding properties have been developed as commercial or residential properties beginning in the 1950s.

Historical records show two businesses have operated dry cleaning plants on-site: One Hour National Dry Cleaning from 1991 through 1996 and Greentree Cleaners from 1996 to present. Businesses immediately adjoining the Site include USA Payday Loans to the north and Cost Cutters Family Hair Salon to the south.

Several rounds of soil and groundwater sampling were conducted by others on-site in 2005. These results were submitted to the Wisconsin Department of Natural Resources (DNR). In its letter issued in 2006, the Wisconsin DNR stated, that based upon the results of environmental testing, it considered the case to be closed and no further investigation or remediation was required at that time.

However, Greentree Cleaners' has continued use of dry cleaning solvents in its operation through present day. Additionally, regulatory limits at the time of the Wisconsin DNR closure (2006) have been updated with more stringent criteria. Given the continued dry cleaner operations post closure and the new regulatory limits, Apex believed this posed a REC to the Site/Parent Tract.

1.3 Previous Reports & Agency Correspondence

Phase I ESA (2016). ATC Group Services, LLC (ATC) prepared a report titled *Phase I Environmental Site Assessment of Greentree Center and Outlot, 5055, 5111, 5125 and 5141 Douglas Avenue, Caledonia, Wisconsin 53402*, dated February 22, 2016.

In its Phase I ESA report, ATC states the following: *The potential for dry cleaning operations to have impacted soil and groundwater at the property since the closure letter was issued in 2006 represents a recognized environmental condition (REC) and a vapor encroachment condition (VEC) can't be ruled out.*

Results of Soil Analysis (2005). The ATC report included a copy of report by Hygienetics Environmental Services, Inc. (Hygienetics) titled *Draft Limited Phase II Subsurface Soil Screening Investigation, Green Tree Shopping Center – Green Tree Cleaners, 5131 D Douglas Avenue, Caledonia, Wisconsin 53402*, dated April 19, 2005.

Hygienetics collected soil samples from four borings, three were located adjacent to the dry cleaning plant (B-1 through B-3) and the fourth boring (B-4) was located near the back door of the tenant space as shown in **Figure 3**. The soil samples were analyzed for volatile organic compounds (VOCs) and the analysis detected tetrachloroethene (PCE) and trichloroethene (TCE) at depths ranging from 2 to 5 feet below ground surface (bgs), the maximum depth explored. The results of the soil analysis by Hygienetics are summarized in **Table 1**.

Results of Soil and Groundwater Analysis (2006). The ATC Phase I ESA also contained a copy of another report for the Site prepared by ECS Illinois (ECS) titled *Site Investigation Report, Greentree Cleaners, 5131-D Douglas Avenue, Caledonia, Wisconsin WIFID No. 252138700, BRRTS 02-52-544402*, dated March 10, 2006. In its report, ESC States the following:

ECS collected soil samples from six borings, including the area of the highest previous VOC concentrations in soil (near the back door of the dry cleaner tenant space). To evaluate potential groundwater impacts, ECS collected a groundwater sample from the boring advanced near the back door of the tenant space (the only boring which encountered groundwater). The soil and groundwater samples were analyzed for VOCs. The soil data shows that the apparent lateral and vertical extent of VOC-impacted soil has been defined. The soil analysis detected relatively low concentrations of VOCs (0.003 to 1.4 milligrams per kilogram, mg/kg). These concentrations do not exceed generic soil

screening levels (SSLs) cited by the US Environmental Protection Agency. Similarly, the groundwater analysis did not detect VOCs at concentrations in excess of regulatory limits. In our opinion, VOCs were not detected in soil or groundwater samples at concentrations suggesting past catastrophic or severe release. The source of VOCs in the subsurface has not been determined, but is believed to reflect isolated spills over time.

The location of soil borings by ECS (B-1 through B-4 and EB-1 through EB-5) are shown in **Figure 3**. The results of soil and groundwater analysis conducted by ECS are included in **Tables 1 and 2**, respectively.

Correspondence from Wisconsin DNR (2006). Apex also reviewed a letter to Inland Commercial Property Management from the Wisconsin DNR titled *Unrestricted Closure for Greentree Cleaners, 5131-D Douglas Ave., Caledonia, WI BRRTS 02-52-544402, FID 252138700*, dated June 9, 2006. In its letter, the Wisconsin DNR states the following:

On June 7, 2006, your site was reviewed for closure. Based upon the correspondence and data provided, it appears that your case meets the requirements of ch. NR 726, Wisconsin Administrative Code. The Department considers this case closed and no further investigation or remediation is required at this time.

Apex notes that Greentree cleaners continued to operate the dry cleaning plant from 2006 to present. Apex also notes that regulatory limits cited by the Wisconsin DNR have been updated since the closure letter was issued in 2006.

Apex Phase I ESA (2016). Apex's Phase I ESA, which is summarized in a report dated November 2016. Based on a review of the previously conducted investigations and the continued use of dry cleaning solvents at the Greentree Cleaners tenant space since 2006, Apex concluded that the dry cleaners presented a REC to the Parent Tract.

Apex Limited Subsurface Assessment (2017). To assess the risk of subsurface impacts associated with the dry cleaning operations at the Greentree Cleaners tenant space since 2006, Apex conducted subsurface assessment on June 13 and 14, 2017.

Subsurface assessment included collection of soil samples from two borings (TW-1 and TW-3), collection of groundwater samples from two temporary monitoring wells (TW-1 and TW-3) and soil-gas samples from three locations (SV-1 through SV-3), in June 2017. Apex notes that groundwater was not encountered in one temporary well (TW-2).

- The soil analysis detected five VOCs at concentrations in excess of Non-Industrial and Industrial Residual Contaminant Levels (RCLs), including PCE, TCE, benzene, methylene chloride and naphthalene.
- The groundwater analysis detected four VOCs at concentrations in excess of Groundwater Quality Standards (GQS), including PCE, TCE, cis-1,2-dichloroethene (c-1,2-DCE), and vinyl chloride (VC).

- The soil-gas analysis detected PCE in one sample at a concentration in excess of commercial Vapor Action Levels (VALs).

Site Investigation Report (October 2017). To further characterize the extent of VOC impacts in soil, groundwater and sub-slab soil-gas, Apex conducted expanded assessment in and near the dry cleaner tenant space in August and September 2017. The specific scope of work included the collection of soil samples from four borings (MW-1, MW-4, MW-5 and MW-6), installation and sampling of seven permanent groundwater monitoring wells (MW-1 through MW-7), and collection of five soil-gas samples (SV-4 through SV-8) between August 9 through 16, 2017.

To further assess subsurface conditions, one additional temporary well (TW-3A) was installed and sampled, one additional monitoring well (MW-8) was installed and sampled, and three additional soil-gas samples (SV-9 through SV-11) were collected between September 12 through 15, 2017. The results of the Site Investigation were summarized in a report dated October 24, 2017.

The locations of the soil borings, groundwater monitoring well locations and soil-gas samples are shown in **Figures 3, 3A and 3B**, respectively. The results of the soil analysis, groundwater analysis and soil-gas analysis are summarized in **Tables 1, 2 and 3**, respectively and discussed further in **Section 2**.

2.0 SUMMARY OF RESULTS

To date 17 soil borings have been advanced in the area of the Greentree Cleaners store in response to a release(s) of dry cleaner solvent into the subsurface. Fourteen groundwater monitoring wells have been installed to assess the groundwater quality in the vicinity of the store. Additionally, 11 soil vapor samples were collected beneath the floor slab of the building to assess the potential for indoor vapor intrusion.

The locations of the soil borings, monitoring wells and sub-slab sample locations are shown in **Figures 3, 3A and 3B**, respectively. Photographs taken at the time of fieldwork are included in **Appendix A**. Apex's field protocols are described in **Appendix B**.

2.1 Soil Conditions

The soil borings encountered the following generalized lithologic sequence:

- Asphalt pavement approximately 4 inches thick was encountered at ground surface which was underlain by approximately 6 inches of crushed stone aggregate.
- Silty clay with occasional discontinuous lenses of sand or silt interbeds were encountered below the crushed stone/aggregate to a depth of 20 feet bgs, the maximum depth explored.

Refer to boring logs included in **Appendix C** for additional information regarding the soil conditions. A cross section of the Site is provided as **Figure 4**.

Twenty-one soil samples were analyzed for VOCs by EPA Method 5035/8260. The results of the soil analysis are summarized in **Table 1**.

The results of the soil analysis for samples collected by Apex (in 2017), by Hygienetics (in 2005) and by ECS (in 2005) were compared to Non-Industrial and Industrial RCLs for Direct Contact and the soil (leaching) component to groundwater cited in the U.S. Environmental Protection Agency's (USEPA) Regional Screening Level Web-Calculator (June 2016) in accordance with Wisconsin Administrative Code NR 720 (WAC 720).

The soil analysis detected five VOCs at concentrations in excess of RCLs, including PCE, TCE, benzene, methylene chloride and naphthalene.

The soil analysis detected VOCs at concentrations in excess of RCLs for the soil (leaching) component to groundwater exposure pathway. The soil analysis did not detect any VOCs at concentrations in excess of RCLs for direct-contact (non-industrial and industrial), and no other VOCs at concentrations in excess of RCLs for the soil component to groundwater per WAC 720. The results of the soil analysis, RCLs and sample depths are summarized in **Table 1** and the sample locations are shown in **Figure 3**. The sample locations with VOC concentrations in excess of RCLs are summarized and shown in **Figure 6**. Copies of the laboratory reports and the chain-of-custody form are included in **Appendix E**.

The results of the soil analysis detected benzene, methylene chloride and naphthalene at concentrations in excess of the soil (leaching) component to groundwater. However, Apex notes that these compounds are not associated with dry cleaning solvents and were not detected in groundwater at concentrations in excess of Preventative Action Limit (PAL) GQSs. Therefore, it is Apex's opinion that a soil remedy for the groundwater pathway for benzene, methylene chloride and naphthalene is not needed.

Previous detections of PCE and TCE in soil collected from below the floor slab could not be replicated during Apex's site investigation due to subsurface obstructions. However, analysis of one soil sample collected from an area with previous RCL exceedances did not detect PCE or TCE at concentrations in excess of RCLs. Potential leaching of PCE and TCE through soil into groundwater can be reduced by the continued maintenance of the existing concrete floor slab as an engineered barrier. It is Apex's opinion that VOCs detected in soil at concentrations in excess of RCLs for the soil component to groundwater have been delineated and that additional soil investigation is not warranted.

2.2 Groundwater Conditions

Following installation, the top of seven groundwater monitoring well casings (MW-1 through MW-7) were surveyed for lateral and vertical control by a licensed surveyor. One groundwater monitoring well (MW-8) was installed at a later date and was surveyed for vertical control using a laser level and the elevation of the previously surveyed wells as a datum. Several days following well installation, stabilized ground water levels were measured in each well within an accuracy of 0.01-foot. The water level data and the results of the well elevation survey was used to calculate the groundwater gradient and lateral flow direction at the Site. The attached **Figure 5** shows the interpreted groundwater flow across the Site.

Thirteen groundwater samples were collected for chemical analysis. The groundwater samples were analyzed for VOCs by EPA Method 8260. The results of the groundwater analysis were compared to Groundwater Quality Standards (GQS, Enforcement Standards and Preventative Action Limits) cited in WAC NR 140.10 Table 1 (WAC 140) and Vapor Risk Screening Levels (VRSLs) for groundwater for a commercial property use based on the USEPA Vapor Intrusion Screening Level Calculator (VISLC, Version 3.5.1, May 2016) with an excess lifetime cancer risk of 1×10^{-5} in accordance with WAC NR 716 (WAC 716).

The groundwater analysis detected four VOCs at concentrations in excess of GQSs, including PCE, TCE, c-1,2-dichloroethene (c-1,2-DCE), and vinyl chloride (VC). Additionally, the groundwater analysis detected one compound at a concentration in excess of the VRSL.

It is Apex's opinion that VOCs detected in groundwater at concentrations in excess of GQSs and/or VRSLs have been delineated. Considering the relatively low concentrations of chlorinated VOCs detected in groundwater, the limited lateral extent of these compounds, and that these compounds do not appear to be migrating off-site, Apex does not believe that active remediation is warranted. However, to demonstrate plume stabilization and/or natural attenuation of these compounds, additional groundwater monitoring will be required. It is anticipated that up to two years of quarterly or monitoring will be needed to demonstrate plume stabilization.

The results of the groundwater analysis, GQSs and VRSLs are summarized in **Table 2** and the sample locations are shown in **Figure 3A**. The sample locations with VOC concentrations in excess of GQSs and/or VRSLs are summarized and shown in **Figure 6A**. Copies of the laboratory reports and the chain-of-custody form are included in **Appendix E**.

2.3 Soil-Gas Analysis

Apex collected 11 soil-gas samples immediately below the concrete floor slab in and adjacent to the dry cleaner tenant space at the locations shown in **Figure 3B**. The soil-gas samples were analyzed for VOCs by EPA Method TO-15.

The results of the soil-gas analysis were compared to sub-slab Vapor Action Levels (VALs) for a commercial property use based on the USEPA VISLC (Version 3.5.1, May 2016) with an excess lifetime cancer risk of 1×10^{-5} in accordance with WAC 716.

The soil-gas analysis detected PCE in two samples, and TCE and chloroform in one sample at concentrations in excess of commercial VALs per WAC 716.

The soil-gas analysis did not detect any additional VOCs at concentrations in excess of commercial VALs per WAC 716. It is Apex's opinion that the VOCs detected in soil-gas have been delineated, and that additional investigation is not warranted.

The results of the soil-gas analysis and VALs are summarized in **Table 3**. The sample locations with VOC concentrations in excess of VALs are summarized and shown in **Figure 6B**. Copies of the laboratory reports and the chain-of custody form are included in **Appendix E**.

3.0 REMEDIAL OPTIONS

The objectives for the proposed remediation at the Site consist of the mitigation of potential indoor vapor intrusion and the monitoring of potential off-site migration of groundwater impacts associated with the release(s) of dry cleaning solvent at the Site. Remedial options considered for the Site included the following:

1. No Action
2. In-situ Injections (biodegradation or chemical degradation)
3. Sub-Slab Depressurization System (SSDS) to mitigate vapor intrusion to indoor air and Monitored Natural Attenuation of Groundwater

Given that the first two options do not address the short-term risk to human health of the occupants of the building, Apex proposes Option No. 3. Natural attenuation associated with Option No. 1 and the degradation associated with Option No. 2 require time to take effect, and leave current tenants of the building exposed to potential inhalation risk until the attenuation/degradation occurs. These two options would likely require years to achieve regulatory compliance.

The mitigation approach provided by Option No. 3 will prevent potential vapors from entering the building once the SSDS is installed and operational. This option will reduce the potential health risk to building occupants immediately upon installation. Option No. 3 mitigates potential indoor vapor intrusion both in the short and long-term.

Other remedial options, such as intrusive remediation, are available; however, with the existence of the on-site building, these options are not feasible for this Site.

4.0 REMEDIAL DESIGN

It is Apex's opinion that the VOCs detected in soil-gas have been delineated, and that additional investigation is not warranted. To eliminate the soil-gas exposure pathway for building occupants, mitigation will be required. In order to address this exposure route, a SSDS will be installed and follow-up monitoring will be conducted to verify the system is effectively mitigating vapor intrusion to indoor air.

Apex designed a SSDS intended to draw soil-vapor from below the floor slab in the areas of soil-gas exceedances creating a vacuum beneath the slab which will immediately reduce potential vapor intrusion from the sub-slab to indoor air. The extraction of sub-slab soil vapors and venting to the outside will also decrease the concentrations of VOCs in sub-slab soil vapors over time. The design includes post-installation communication test to determine the radius of influence for the SSDS. The proposed SSDS installation, the post-installation soil-gas sampling and/or indoor air sampling, and groundwater monitoring are described below.

4.1 Installation of Sub-Slab Depressurization System

Prior to SSDS installation, a communication test will be performed using a high suction centrifugal vent fan (similar to that to be installed in each exhaust vent) and a micro manometer will be used to determine how easily air can move from one point to another beneath the slab and the radius of depressurization achieved by each extraction sump. During the test a centrifugal fan will be installed in a hole that is cored in the floor slab. Small holes will be cored in strategic locations through the slab and a micro manometer will be used to gauge how the air flow is affected by the force of the fan. Monitoring pressure differentials during the soil communication test will determine the most efficient configuration for the active venting system.

The SSDS will be installed to address the potential indoor vapor intrusion. The SSDS will include the following:

1. An extraction sump is installed that is at least two cubic feet and extends at least 6 inches below the slab (larger extraction sumps may be excavated as needed to achieve the performance criteria described below);
2. A PVC pipe of at least 3 inches in diameter extends from the extraction sump to the intake side of an in-line fan (Specifications enclosed in **Appendix F**) capable of achieving a static vacuum of at least 0.25 inches water column (wc) at the suction point and measurable vacuum at the farthest edges of the area served by the suction pit under worst case conditions (all exhaust fans and heating systems running, during cold weather) as determined by a differential pressure reading of at least -0.003 inches wc below the slab or visible downward flow of air at test holes using chemical or smoke sticks;
3. All visible cracks and joints in the slab (including the location where the PVC pipe exits the slab) and foundation walls are sealed;

4. The pipe will exhaust outside the building at least 10 feet above ground and at least 10 feet from any door or window; and,
5. Additional extraction sumps meeting the requirements described above shall be installed as necessary to achieve measurable vacuum below the slab in all areas that demonstrate the potential for vapor intrusion, including in any area where subsurface or foundation conditions (e.g., a sub-slab grade beam) prevent adequate suction field extension.

All materials and installation techniques will follow guidelines put forth in ASTM International (ASTM) E2121: Standard Practice for Installing Radon Mitigation systems in Existing Low-Rise Residential Buildings. Radon systems are nearly identical in design to SSDS and this ASTM Standard was applicable to residential and commercial properties.

Following SSDS installation, an additional communication test will be performed to confirm that the extraction system is performing as intended. After a period of at least one month, an indoor air sample will be collected at USA Payday Loans to confirm that the SSDS has been effective and indoor air meets the indoor air VALs. Since there are indoor sources of PCE in the Greentree Cleaners, no sampling of indoor air will be conducted in that tenant space.

Following SSDS installation and post-installation performance testing, Apex will prepare an SSDS installation letter report documenting installation and testing activities with guidelines for visual monitoring of the system on a regular basis by local maintenance staff. We will also provide an annual check list to document system operation for use by maintenance staff.

To better define the area that warrants treatment, Apex proposes to operate the SSDS for a period of four months and then conduct a round of post-operation soil-gas sampling. The objective of this additional round of sampling would be to assess whether the SSDS has reduced the target analytes near previous soil-gas samples SV-3 and SV-4 to concentrations below VALs.

Apex proposes that three additional soil-gas samples be collected in the area around SV-3 and SV-4 for analysis. Discrete soil-gas samples will be analyzed for the target analytes by EPA Method TO-15. The soil-gas analysis will be performed by a National Environmental Laboratory Accreditation Conference certified laboratory.

4.2 Monitoring Natural Attenuation

It is Apex's opinion that VOCs detected in groundwater at concentrations in excess of QGSs and/or VRSLs have been delineated. Considering the relatively low concentrations of chlorinated VOCs detected in groundwater, the limited lateral extent of these compounds, and that these compounds do not appear to be migrating off-site, Apex does not believe that active remediation is warranted. To demonstrate plume stabilization and/or natural attenuation of these compounds, additional groundwater monitoring will be required. It is anticipated that up to two years of quarterly monitoring will be needed to demonstrate plume stabilization. Apex proposes to collect groundwater samples on a quarterly basis until four consecutive sampling events suggest a stable or decreasing plume associated with the dry cleaner solvent release.

Groundwater samples will be collected from each monitoring wells using a low flow pump, in accordance with Wisconsin DNR-approved protocols. Following collection, the groundwater samples will be placed in clean, laboratory-supplied vials or bottles, labeled and placed in a chilled cooler pending delivery to the analytical laboratory. Appropriate chain-of-custody protocols will be maintained throughout the sample-handling process.

Groundwater samples from each groundwater monitoring well (eight samples per sampling event) will be analyzed for VOCs by EPA Method 8260. The groundwater analysis will be performed by a NELAC-certified lab on a one-week laboratory turnaround basis.

Investigation derived waste (water generated through groundwater monitoring well purging) will be temporarily stored on-site in DOT-approved 55-gallon drums.

Notes:

bgs = feet below ground surface

TW-1 = Soil boring completed by Apex (2017)

EB-1 = Soil boring completed by ECS (2005)

B-1 = Soil boring completed by Hygienetics (2005)

< = Not Detected: Concentration less than the indicated laboratory detection limit

Detected compounds are shown as **bold**

— = specific parameter not included in analysis

NE = Remedial Objective not established

RCLs (Non-Industrial Direct-Contact) = Residual Contaminant Levels per the U.S. EPA's Regional Screening Level Web-Calculator (updated March 2017) in accordance with Wisconsin Administrative Code NR 720

RCLs (Industrial Direct-Contact) = Residual Contaminant Levels per the U.S. EPA's Regional Screening Level Web-Calculator (updated March 2017) in accordance with Wisconsin Administrative Code NR 720

RCLs (Soil to Groundwater) = Soil to Groundwater Residual Contaminant Levels per the U.S. EPA Regional Screening Level Web-Calculator (updated March 2017) in accordance with Wisconsin Administrative Code NR 720

Concentrations in excess of RCLs are shaded yellow

Exceeded RCLs are shaded green

Notes:

TW-1 = Temporary monitoring well installed by Apex (2017)

GW-2 = Temporary monitoring well installed by ECS (2005)

< = Not Detected: Concentration less than the indicated laboratory detection limit.

Detected concentrations are shown in **bold**.

NE = Remedial Objective not established.

Groundwater Quality Standards (GQSs) cited in Wisconsin Administrative Code NR 140.10 Table 1

Vapor Risk Screening Levels (VRSLs) for groundwater with a commercial property use based on the U.S. EPA Vapor Intrusion Screening Level Calculator (Version 3.5.2, October 2017) with an excess lifetime cancer risk of 1×10^{-5} in accordance with Wisconsin Administrative Code NR 716

-  Concentrations in excess of GQSs and/or VRSLs are shaded yellow
-  Exceeded GQSs and/or VRSLs are shaded green

Appendix B

Field Protocols, Soil-Gas Sample Logs & Well Data Sheets

SUMMARY OF FIELD PROTOCOLS
EXPANDED SUBSURFACE INVESTIGATION
GREENTREE CLEANERS – GREENTREE CENTRE
5131 DOUGLAS AVENUE, UNIT D
RACINE, RACINE COUNTY, WISCONSIN

Phillips Edison & Company (PECO) retained Apex Companies, LLC (Apex) to perform an Expanded Subsurface Investigation at a dry cleaner tenant space in the Greentree Centre, a retail strip mall located at 5131 Douglas Avenue, Unit D in Racine, Racine County, Wisconsin. We understand that PECO recently acquired the Site for continued use as a multi-tenant retail shopping center.

Subsurface assessment included performance of a non-invasive geophysical survey to clear underground utilities in the vicinity of soil borings; installation of three temporary groundwater monitoring wells; soil and groundwater sampling and analysis; sub-slab soil gas (vapor) sampling and analysis; well surveying; water level measurement; and hydraulic conductivity testing. It should be noted that groundwater samples could not be collected in one temporary well due to insufficient groundwater recharge.

Geophysical Survey

In an effort to avoid damaging substructures such as buried utilities at the Site, Apex retained Ground Penetrating Systems, Inc. (GPRS) to perform a non-invasive geophysical survey. The geophysical survey was performed using a combination of ground-penetrating radar (GPR) and radio detection (RD) techniques.

GPR transmits an electromagnetic pulse using a 400 MHz antenna through the ground and displays the reflection on a screen for immediate interpretation. GPR data was collected to evaluate the presence, depth and shape of subsurface targets (USTs, piping, buried foundations, etc.). The depth of exploration for GPR is typically limited to 5-7± feet below ground surface (bgs), depending on soil conditions.

RD techniques (RD-7000 Locator, or similar) are used to gauge the location of the buried metallic piping or conduits such as drain pipes. Radio detection involves induction of an electrical signal on metal objects (such as the ends of the piping or conduits) and tracing this signal using a hand-held detector.

Soil Sampling Using a Hydraulic Probe

To assess the presence of potential chemical impacts in shallow soil in the vicinity of the dry cleaner tenant space, Apex used a truck-mounted hydraulic probe (Geoprobe™ rig) to collect soil samples. Each of the borings was advanced to probe refusal, encountered at depths ranging from 12 to 20 feet bgs; copies of the boring logs are included in **Appendix C**.

Soil samples were collected continuously from ground surface to the bottom of each boring by pushing a 2-inch diameter by 5-foot long hollow-barreled sampler into/through the soil. Soil samples were collected in dedicated, disposable plastic liners contained in the sampler.

Lithologic Description

Soil samples were collected continuously from ground surface to the bottom of each boring for lithologic description and soil screening. An experienced geologist documented the subsurface conditions (soil type, photo-ionization detector [PID] measurements, the presence of staining, odors etc.). Our field observations and lithologic descriptions are summarized in the boring logs included in **Appendix C**.

Sample Screening/Selection

Soil samples were screened in the field for chemical odors, evidence of staining and volatile organic emissions using a PID equipped with a 10.6 eV PID lamp. The PID was calibrated using isobutylene calibration gas in accordance with the manufacturer's protocols prior to the start of fieldwork. Soil collected from various depth intervals in each boring was broken apart, placed and sealed in plastic 'ziploc' bags and after a few minutes volatile emissions were measured in the headspace using the PID. In the absence of such indications soil samples were not submitted for analysis. The results of the field screening are shown in Apex's boring logs, and Wisconsin DNR Soil Boring Log Information forms (Form 4400-122) in accordance with WAC NR 716.15(4)(g)(4), included in **Appendix C**.

Soil Sample Handling Procedures

A total of nine soil samples collected from six borings were analyzed for volatile organic compounds (VOCs) by EPA Method 5035/8260. The samples were collected by pushing an Encore® sampler syringe into the soil to collect a 10 gram sample, the Encore® plunger was used to extrude the soil sample into clean, laboratory-supplied 40 milliliter (ml) VOA vials with methanol preservative. The VOA was immediately capped, labeled and placed in a chilled cooler for transport to the analytical laboratory. Soil samples for additional parameters were placed in clean, 4-ounce laboratory-supplied jars. Chain-of-custody protocols were maintained throughout the sample handling process.

Temporary Well Construction

A Geoprobe rig was used to advance a borehole at each temporary well location to document the soil conditions and to collect soil samples to a depth ranging from 12 to 20 feet bgs. Three temporary wells (TW-1, TW-3 and TW-3A) were constructed by lowering a clean, 10-foot long, 1-inch diameter polyvinyl chloride (PVC) well screen with a 5-foot long blank riser into the water table in the borings. Filter (sand) pack was not placed in the annulus between the well screen and the borehole, due to caving conditions of native sand into the borehole. Copies of the boring logs and well construction diagrams are included in **Appendix C**.

Monitoring Well Construction

A Geoprobe rig was used to advance a borehole at each monitoring well location to document the soil conditions and to collect soil samples. A truck-mounted hollow-stem auger drill rig was then used at eight locations (MW-1 through MW-8) to advance an 8-inch diameter borehole into the underlying aquifer zone; each well was installed to depths ranging from 19½ to 20 feet bgs.

The monitoring wells were constructed using 2-inch diameter (schedule 40) PVC casing consisting of a 10-foot length of 0.010-inch factory slotted well screen with a blank riser. The filter pack, consisting of

a sand pack, was placed around the well screen/riser extending 2-feet above the top of the screen. The annulus of the borehole was then filled with bentonite chips (hydrated in place) to a depth of approximately 1-foot bgs, the remainder of the borehole was filled with cement. The wells were completed at ground surface using flush-mount well vaults set in cement. A magnet was placed in the void between the cover and the annular space seal in accordance with NR 716.13(14)(b). Copies of Apex's boring logs and well construction diagrams, and Wisconsin DNR Groundwater Monitoring Well Information form (Form 4400-89) and Monitoring Well Construction forms (Form 4400-113A) in accordance with WAC NR 716.15(4)(g)(2), are included in **Appendix C**.

Monitoring Well Development

Following installation, the monitoring wells were developed to remove sediment, consolidate the filter pack around the well screen and to improve hydraulic communication with the aquifer. Well development procedures consisted of the removal of approximately 2 to 6 well casing volumes of groundwater, and are documented in Wisconsin DNR Monitoring Well Development forms (Form 4400-113B) in accordance with WAC NR 716.15(4)(g)(3), included in **Appendix C**. Groundwater sampling was performed one week following well development.

Groundwater Sampling

Apex used a low-flow, peristaltic suction lift pump to purge two to three volumes of water from the well casing at a rate of ¼ gallon per minute prior to sampling. Due to limited groundwater availability the temporary wells (TW-1, TW-3 and TW-3A) were not purged prior to sample collection. Clean, dedicated tubing was used at each well for well purging and water sampling. A multi-probe water quality meter was used for the monitoring wells (MW-1 through MW-8) to simultaneously measure pH, temperature, conductivity, dissolved oxygen and Oxidation-Reduction Potential. Once these parameters stabilized to within 10 percent on three consecutive measurements, the peristaltic pump was used to collect water samples. Groundwater parameter measurements are included in **Appendix B**. Apex notes that one temporary well (TW-2) did not produce groundwater and could not be sampled.

Water samples collected for volatile organic compound (VOC) analysis were collected by filling 40-ml vials in a manner to minimize turbulence, air entrapment and overfilling. VOCs sample vials contained a hydrochloric acid preservative. The bottles were filled completely leaving a positive meniscus at the top of the vial. After capping, the vial was inverted and was tapped with a finger to confirm that air bubbles were not present. Effervesce was not observed in the vials following collection. Chain of custody documentation was maintained throughout the sample handling process. The sample vials and jars were then labeled and placed in a chilled cooler for transport to the analytical laboratory. As a quality assurance/quality control, Apex submitted one duplicate sample (from MW-1) and one trip blank for analysis.

Soil-Gas Sampling Procedures

Soil-gas samples were collected for analysis of VOCs including tetrachloroethene (PCE) and associated breakdown products from immediately below the concrete floor slab within the dry cleaner tenant space.

Apex advanced eleven soil-gas probes (SV-1 through SV-3) through the concrete floor slab at each location. A rotary hammer drill was used to advance a small diameter hole (5/8-inch) through the concrete slab or pavement into the underlying gravel-aggregate layer, approximately nine inches below the top of the hard surface. A 1-inch diameter hole was drilled in the same location to approximately 1/2-inch below the top of the concrete floor for leak testing. The hole was then cleared of any debris prior to installing the soil gas probe. The soil gas probes consisted of a brass MIP adapter/compression coupling, covered with a silicone tube, which was inserted and seated firmly into the 5/8-inch diameter hole drilled through the hard surface. Leak testing was performed on each soil gas probe by mechanical means using the larger diameter hole as a water dam. The annulus of the 1-inch hole was filled with distilled water and monitored for fluctuations prior to and during sampling to verify that a leak had not occurred. Apex installed vapor pins in the concrete slab in 4 locations to allow for future sample collection, if warranted.

Prior to sample collection, the eight sub-slab gas probes were purged a minimum of three probe volumes of air from the sampling media to ensure representative samples of sub-slab soil gas and field screened for volatile organic emissions using a photoionization detector (PID) equipped with a 10.6 eV PID lamp. Soil gas samples were collected using batch-certified 6-liter Summa[®] canisters (evacuated stainless steel canister) with (30-minute) flow control valves with a flow rate of less than 200 milliliters per minute (mL/min). The laboratory-supplied regulator assembly was attached to the Summa[®] canister and a 3-foot section of 0.25-inch Teflon-lined polyethylene tubing was connected to the regulator using Swagelock[®] compression fittings. Leak testing was performed on each Summa[®] canister sample train prior to sample collection by performing a shut-in test. The shut-in test was performed by connecting the sample train tubing to a syringe and plunger. With the Summa[®] canister valve closed, a vacuum of approximately 20-inches mercury was applied to the sample train and maintained for 30 seconds. The pressure was observed to remain stable for the duration of the test. A photo log including photographs of the sub-slab soil gas sampling locations are included as **Appendix A**; soil-gas sampling details (i.e., results of field screening and leak testing; sample duration, initial and final canister pressures; and laboratory identification numbers) are recorded in the soil-gas sample logs included in **Appendix B**.

Following sub-slab soil gas sample collection, the temporary soil gas probes were removed from the floor slab and the sampling area was patched with concrete at each location. In areas where vapor pins were installed, the pins were capped to prevent transmission and covered with a secure stainless steel cover.

The sample canisters were shipped to the analytical laboratory via Federal Express, accompanied by a completed chain-of-custody form. The samples were analyzed for VOCs by U.S. Environmental Protection Agency (EPA) Method TO-15 with a standard 5-day turnaround time.

Well Surveying and Water Level Measurement

The top of seven monitoring well casings (MW-1 through MW-7) were surveyed for vertical control to an accuracy of 0.01-foot by Spaceco, Inc., a Wisconsin licensed surveyor. One monitoring well (MW-8) was installed at a later date, and was surveyed for vertical control using a laser level and the elevation of the previously surveyed wells as a datum. An electronic well sounder was used to measure to depth to groundwater from the top of the well casing to the top of shallow groundwater within an accuracy of 0.01-foot. The depth to water measurements was recorded in each well on

August 14, 16 and September 15, 2017. Stabilized water levels occurred at depths ranging from 9½ to 13 feet bgs, or 618 to 621½ feet mean seal level (MSL). A summary of the well elevations provided by Spaceco, Inc., the depth to groundwater and stabilized groundwater elevations included in **Appendix D**.

Hydraulic Testing

To determine the hydraulic conductivity of the underlying aquifer Apex performed hydraulic testing in three dedicated monitoring wells (MW-1, MW-3 and MW-5). A pressure transducer/data logger was lowered below the water table and the water level was allowed to stabilize. The transducer/data logger was then connected to a Rugged Reader® using a waterproof coaxial cable. A quantity of water ('slug') was quickly removed from the well and rising head recovery rates were measured over time, until the water level recovered over the duration of the test. Due to the slow recovery, the test was performed only once per well. A copy of the test parameters, field measurements, and head verses time data generated during the test runs are included in **Appendix D**.

SOIL-VAPOR IMPLANT SAMPLE LOG

ADDITIONAL DETAILS

Other details for tenant space (e.g. recent construction/renovation, cleaning activities, chemical storage, slab/foundation cracks, HVAC status etc.):

Sample collected near the rear of the Kings Wok tenant space.

Problems or inconsistencies encountered during sampling:

* Include a site sketch on separate sheet noting sample locations (with measurements), chemical storage areas, former operations areas, etc.

Sample Number: SV-11

Analysis: VOCs by EPA Method TO-15

SUMMA ID Number: 2022

Requested Turnaround Time: 1 week

Regulator ID Number: FC1160

Sample Crew: Scott Kangas

PROJECT NAME: Greentree Centre PROJECT NUMBER: PECO_2017-67 PROJECT LOCATION: 5131 Douglas Ave., Unit D Racine, Wisconsin	SOIL BORING NUMBER: MW-8 LOGGED BY: Joe Becker DATE: September 12, 2017
DRILLING CONTRACTOR: Environmental Soil Probing DRILLER: Derek, Tyler and Marcus RIG TYPE: Track-mounted Geoprobe SAMPLING METHOD: Dual-core	TOTAL BORING DEPTH: 20 Feet BOREHOLE DIAMETER: 8 Inches - Auger WELL DEPTH: 20 Feet WELL DIAMETER: 2 Inch DEPTH TO WATER : 19 1/2 Feet (Observed in sample) 13.11 Feet (Prior to sampling on 9/15/17)
GROUND ELEV (FT): 631.69 TOP OF CASING ELEV (FT): 631.46	

DEPTH IN FEET	RECOVERY (FT)	PID (ppm)	LABORATORY I.D.	WELL CONSTRUCTION	GRAPHIC LOG	WATER LEVEL	SAMPLE DESCRIPTION
1				Flush-mount well box			4" Asphalt
2	2 1/2	< 5		Bentonite			4" Aggregate (CL) Sandy gravelly clay, grayish brown, dry, no odor
3							
4		< 5					
5							(CL) Silty clay, trace sand, brown, slightly damp, no odor
6		< 5		2" PVC well casing			
7	3 1/2						
8		< 5					Limestone fragement
9							
10				00 Sand			Very stiff
11		< 5					
12	2 1/2						
13		< 5		0.01" PVC well screen		▼	Trace gravel, grayish brown, damp
14							
15							
16							
17	5 1/2						Decrease in gravel
18							
19				PVC cap at bottom of well casing			(ML) Clayey silt, grayish brown, saturated, no odor
20							

Bottom of Boring at 15-1/2 feet - Refusal

Please complete both Forms 4400-113A and 4400-113B and return them to the appropriate DNR office and bureau. Completion of these reports is required by chs. 160, 281, 283, 289, 291, 292, 293, 295, and 299, Wis. Stats., and ch. NR 141, Wis. Adm. Code. In accordance with chs. 281, 289, 291, 292, 293, 295, and 299, Wis. Stats., failure to file these forms may result in a forfeiture of between \$10 and \$25,000, or imprisonment for up to one year, depending on the program and conduct involved. Personally identifiable information on these forms is not intended to be used for any other purpose. NOTE: See the instructions for more information, including where the completed forms should be sent.

1. Can this well be purged dry? Yes No

2. Well development method
- surged with bailer and bailed 41
 - surged with bailer and pumped 61
 - surged with block and bailed 42
 - surged with block and pumped 62
 - surged with block, bailed and pumped 70
 - compressed air 20
 - bailed only 10
 - pumped only 51
 - pumped slowly 50
 - Other

3. Time spent developing well 15 min.

4. Depth of well (from top of well casing) 20.0 ft.

5. Inside diameter of well 2.00 in.

6. Volume of water in filter pack and well casing 6.5 gal.

7. Volume of water removed from well 4.5 gal.

8. Volume of water added (if any) 0 gal.

9. Source of ~~water~~ added

10. Analysis performed on water added? Yes No
(If yes, attach results)

17. Additional comments on development:

	Before Development	After Development
11. Depth to Water (from top of well casing)	a. <u>17.11</u> ft.	<u>16.00</u> ft.
Date	b. <u>09/13/2017</u> m m d d y y y y	<u>09/13/2017</u> m m d d y y y y
Time	c. <u>12:00</u> <input type="checkbox"/> a.m. <input checked="" type="checkbox"/> p.m.	<u>12:15</u> <input type="checkbox"/> a.m. <input checked="" type="checkbox"/> p.m.
12. Sediment in well bottom	<u>0</u> inches	<u>0</u> inches
13. Water clarity	Clear <input type="checkbox"/> 10 Turbid <input checked="" type="checkbox"/> 15 (Describe) <u>Brown</u>	Clear <input checked="" type="checkbox"/> 20 Turbid <input type="checkbox"/> 25 (Describe) <u> </u>

Fill in if drilling fluids were used and well is at solid waste facility:

14. Total suspended solids ~~mg/l~~ mg/l

15. COD ~~mg/l~~ mg/l

16. Well developed by: Name (first, last) and Firm

First Name: Joe Last Name: Becker

Firm: Apex Companies, LLC

Name and Address of Facility Contact/Owner/Responsible Party

First Name: Last Name:

Facility/Firm: Greentree Centre/Phillips Edison

Street: 5131 Douglas Avenue

Notes: MSL - Mean Sea Level

Greentree Centre
5131 Douglas Avenue, Unit D
Racine, Wisconsin
Apex Project No.: PECO_2017-67

Results of Hydraulic Slug Testing: MW-1

WELL INFORMATION

Well ID:	MW-1
Date:	Tuesday, September 12, 2017
Test No.:	1
Start Time:	14:00
Test Type:	Rising Head
Test Method:	Bail down
Ground Elev.:	632.10 feet AMSL
TOC Elev.:	631.72 feet AMSL
Lithology:	4 inches asphalt; 4 inches aggregate; gravelly sand (SW) to a depth of 2 feet bgs; silty clay (CL)/clayey silt (ML) with trace gravel to a depth of 7 feet bgs; silty clay (CL) with trace gravel to a depth of 20 feet bgs, the maximum depth explored. A 3 inch silty sand (SM) lens was observed at 16 feet bgs.

INPUT PARAMETERS

Well Construction:	
Borehole Radius (r_w) =	4 inch
Casing Radius (r_c) =	1 inch
Screen Length (L_s) =	10 feet
Screen Slot Open =	0.01 inch
Filter Pack:	8 to 20 feet bgs 00 Silica Sand
Annular Fill:	Bentonite
Depths:	
Well =	20 feet bgs
Stabilized Water Level (L_w) =	6.98 feet
Top of Screen =	10 feet bgs
Top of Aquifer =	2 feet bgs
Base of Aquifer (H) =	20 feet bgs
Dimensionless Parameters	
$\log(L_w/r_w) =$	1.5
A =	2.5
B =	0.4
C =	2.1

CALCULATIONS

Effective Radius of Influence (Partially Penetrating)	
$\ln(R_e/r_w) =$	2.61
Slope =	-1.08E-04

WELL DIAGRAM

BOUWER & RICE SLUG TEST EQUATIONS¹

Hydraulic Conductivity	
$K = \frac{r_c^2 \ln\left(\frac{R_e}{r_w}\right)}{2L_w} \frac{1}{t} \ln \frac{y_0}{y_t}$	
Effective Radius of Influence Partially Penetrating Well ($L_w < H$):	
$\ln\left(\frac{R_e}{r_w}\right) = \left[\frac{1.1}{\ln\left(\frac{L_w}{r_w}\right)} + \frac{A + B \ln\left(\frac{H - L_w}{r_w}\right)}{\left(\frac{L_w}{r_w}\right)} \right]^{-1}$	
Fully Penetrating Well ($L_w = H$):	
$\ln\left(\frac{R_e}{r_w}\right) = \left[\frac{1.1}{\ln\left(\frac{L_w}{r_w}\right)} + \frac{C}{\left(\frac{L_w}{r_w}\right)} \right]^{-1}$

RE: Project: PECO-2016-78B GREEN TREE CNTR
Pace Project No.: 40151790

Dear Joe Becker:

Enclosed are the analytical results for sample(s) received by the laboratory on June 16, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Laurie Woelfel

ANALYTICAL RESULTS

Project: PECO-2016-78B GREEN TREE CNTR

Pace Project No.: 40151790

Sample: TW-1 @ 5' **Lab ID: 40151790003** Collected: 06/13/17 10:30 Received: 06/16/17 10:05 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: PECO-2016-78B GREEN TREE CNTR

Pace Project No.: 40151790

Sample: TW-3 @ **Lab ID:** 40151790005 Collected: 06/13/17 10:00 Received: 06/16/17 10:05 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: PECO-2016-78B GREEN TREE CNTR

Pace Project No.: 40151790

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

ANALYTE QUALIFIERS

W Non-detect results are reported on a wet weight basis.

RE: Project: Greentree Centre
Pace Project No.: 10392543

Dear Joseph Becker:

Enclosed are the analytical results for sample(s) received by the laboratory on June 16, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Carolynne Trout

QUALIFIERS

Project: Greentree Centre

Pace Project No.: 10392543

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

ANALYTE QUALIFIERS

IS The internal standard response is below criteria. Results may be biased high.

MN The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.

SS This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

RE: Project: PECO_2017-67 GREENTREE CENTRE
Pace Project No.: 40154937

Dear Joe Becker:

Enclosed are the analytical results for sample(s) received by the laboratory on August 12, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Laurie Woelfel

ANALYTICAL RESULTS

Project: PECO_2017-67 GREENTREE CENTRE

Pace Project No.: 40154937

Sample: MW-1 @ 4' **Lab ID: 40154937001** Collected: 08/09/17 10:25 Received: 08/12/17 08:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: PECO_2017-67 GREENTREE CENTRE

Pace Project No.: 40154937

Sample: MW-2 @ 4' **Lab ID: 40154937003** Collected: 08/10/17 11:50 Received: 08/12/17 08:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: PECO_2017-67 GREENTREE CENTRE
Pace Project No.: 40154937

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

ANALYTE QUALIFIERS

W Non-detect results are reported on a wet weight basis.

RE: Project: PECO-2017-67 GREENTREE CENTER
Pace Project No.: 40155312

Dear Joe Becker:

Enclosed are the analytical results for sample(s) received by the laboratory on August 18, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Laurie Woelfel

QUALIFIERS

Project: PECO-2017-67 GREENTREE CENTER

Pace Project No.: 40155312

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

ANALYTE QUALIFIERS

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results may be biased high.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

REPORT OF LABORATORY ANALYSIS

RE: Project: PACO_2017-67 Greentree Ctr-Rev
Pace Project No.: 10400143

Dear Joseph Becker:

Enclosed are the analytical results for sample(s) received by the laboratory on August 18, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This report was revised on August 28, 2017 per request from Joseph Becker to change the Sample ID for 10400143001 to SV-8. No data was modified.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Carolynne Trout

QUALIFIERS

Project: PACO_2017-67 Greentree Ctr-Rev

Pace Project No.: 10400143

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

ANALYTE QUALIFIERS

A3 The sample was analyzed by serial dilution.

IS The internal standard response is below criteria. Results may be biased high.

MN The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.

RE: Project: P5CO-2017-67 Greentree Cleaner
Pace Project No.: 10403290

Dear Joseph Becker:

Enclosed are the analytical results for sample(s) received by the laboratory on September 14, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Carolynne Trout

QUALIFIERS

Project: P5CO-2017-67 Greentree Cleaner

Pace Project No.: 10403290

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

RE: Project: PECO-2017-67 GREENTREE CENTRE
Pace Project No.: 40156894

Dear Joe Becker:

Enclosed are the analytical results for sample(s) received by the laboratory on September 16, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Laurie Woelfel

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: PECO-2017-67 GREENTREE CENTRE

Pace Project No.: 40156894

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

Specifications for RadonAway Model GP501 Mitigation Fan

Radon Mitigation Fan

All RadonAwayTM fans are specifically designed for radon mitigation. GP Series Fans offer a wide range of performance options that make them ideal for most sub-slab radon mitigation systems.

Features

- Quiet operation
- Water-hardened motor
- Seams sealed under negative pressure (to inhibit radon leakage)
- Mounts on duct pipe or with integral flange
- 3" diameter ducts for use with 3" or 4" pipe
- Electrical box for hard wire or plug in
- ETL Listed - for indoor or outdoor use
- 4 interchangeable GP models

MODEL	P/N	FAN DUCT DIAMETER	WATTS	MAX. PRESSURE ⁴ WC	TYPICAL CFM vs. STATIC PRESSURE WC							
					1.0"	1.5"	2.0"	2.5"	3.0"	3.5"	4.0"	
GP201	23007-1	3"	40-60	2.0	82	58	5	-	-	-	-	
GP301	23006-1	3"	55-90	2.6	92	77	45	10	-	-	-	
GP401	23009-1	3"	60-110	3.4	93	82	60	40	15	-	-	
GP501	23005-1	3"	70-140	4.2	95	87	80	70	57	30	10	

Made in USA with US and imported parts

ETL Listed

All RadonAway inline radon fans are covered by our 5-year, hassle-free warranty
