Subject: Sample Results Notification, Tyco Fire Technology Center PFAS
2700 Industrial Parkway South, Marinette, Wisconsin

Dear Ms. Sellwood,

On behalf of Tyco Fire Products LP (Tyco), Arcadis is providing this Sample Results Notification for waste characterization and disposal activities related to the Tyco Fire Technology Center (FTC) per- or polyfluoroalkyl substances (PFAS) site located at 2700 Industrial Parkway South in Marinette, Wisconsin (Site).

This Sample Results Notification is being provided to satisfy NR716.14(2) for waste characterization and disposal samples of foam collected from area ditches and stored no more than 90 days in leak proof, 55-gallon drums prior to disposal. The foam was collected from Ditch B in the City of Marinette between May 21 and July 20, 2021 consistent with the Revised Foam Monitoring Work Plan submitted to the Wisconsin Department of Natural Resources (WDNR) on April 14, 2021 by Arcadis. A sample of the liquid resulting from stored collapsed foam was tested at an accredited, independent laboratory. That testing is now complete, and the PFAS results are summarized in the attached table with sample locations depicted in the attached figure.

As previously stated in a June 18, 2021 correspondence with WDNR under the subject “Sample Results Notification, Tyco Fire Technology Center PFAS,”[1] Tyco has monitored area ditches daily since March 2021 consistent with the Revised Foam Monitoring Work Plan submitted in April 2021. Tyco will continue maintaining and monitoring booms in ditches at the approved frequency during the calendar year to capture and remove foam until seasonal winter weather conditions necessitate removal of the booms. Booms will be re-deployed in 2022 following the cessation of freezing conditions.

Between May 21, 2021 and July 20, 2021, a total of approximately 20 gallons of uncollapsed foam was skimmed from the surface water using a pool skimmer at the boom located in Ditch B. That foam was stored on Tyco property in a leak proof, 55-gallon drum where it collapsed to approximately 1.7 gallons of liquid. Waste characterization samples were analyzed for PFAS and the liquid from collapsed foam will be sent off site for disposal at a permitted facility outside the state of Wisconsin by August 19, 2021. Final documentation of disposal will be provided to the Wisconsin Department of Natural Resources (WDNR) when available.

[1] Arcadis to Wisconsin Department of Natural Resources, 2021. Sample Results Notification, Tyco Fire Technology Center PFAS. June 18, 2021.

Similar to the previous report, the cause of some PFAS in the collected foam is attributable to Tyco's historic operations at the FTC and the remainder is due to PFAS that is ubiquitous in the environment[2,3]. Investigation and modeling data demonstrate that PFAS is migrating through groundwater from the FTC to the east where it can upwell to surface water resulting in detectable concentrations within the surface water. Tyco has been monitoring the surface water in area ditches since 2018 as part of the site investigation process. The PFAS concentrations in foam are predictably higher than the concentrations in groundwater or surface water due to the physical properties of PFAS at the molecular level as discussed in the correspondence to WDNR dated June 18, 2021. In instances where PFAS are present in the water, the foam has been found to accumulate PFAS at higher concentrations than is present in the water. This effect has been demonstrated within the State of Wisconsin at Starkweather Creek[4] and in the City of Peshtigo at a dam within the Peshtigo River[5] where WDNR collected simultaneous samples of foam and surface water for PFAS analyses. In all instances, the concentration of PFAS in foam was amplified as compared to the concentrations of PFAS in the underlying surface water. However, the concentration of PFAS in surface water cannot be used to accurately estimate the concentration of PFAS in foam. As an example, PFOS concentrations were amplified by between 200 and 2,700 times in these reported samples compared to the concentrations of PFOS in the underlying surface water. The increase in concentrations has been observed to be even greater in similar studies conducted by the State of Michigan where the observed PFAS concentrations in surface water were compared to PFAS concentrations in foam[6].

The significance of the results includes:

1. Foam is naturally occurring in the environment
2. Some PFAS in the collected foam comes from historic FTC operations, the remainder is ubiquitous in the environment[2,3]
3. PFAS concentrations amplify in foam
4. Collecting and properly disposing of foams also removes PFAS from the environment because PFAS aggregates in foam

The results reported herein and other results referenced demonstrate the science underpinning some emerging PFAS remediation approaches. Specifically, recognizing the strong affinity of PFAS for foam, research groups and private industry are developing techniques to introduce bubbles and foaming agents to PFAS-impacted waters as a means of capturing and removing PFAS. This technology works due to the physical properties of PFAS as explained previously: therefore, the results presented indicating elevated concentrations of PFAS in foam are expected.

The Groundwater Extraction and Treatment System (GETS) is being constructed and implemented to improve surface water concentrations of PFAS in Ditch B and foam that is collected will continue to be monitored over time.

Tyco posted signs advising the public not to drink, play, or swim in the foam at multiple locations in the City of Marinette. Tyco also offered signs to homeowners with private ponds and select private property owners along

Table 1
Sample Results

Notes:

< = Compound not detected at method detection limit.
(1) = Combined criteria for FOSA, NEtFOSE, NEtFOSA, NetFOSAA, PFOS, and PFOA
-- = No standard
N = Normal sample
ng/l = nanograms per liter

Data Qualifier:
U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
D = Dilution required for sample analysis.
J- = The result is an estimated quantity. The associated numerical value is expected to have a negative or low bias.
J+ = The result is an estimated quantity. The associated numerical value is expected to have a positive or high bias.
JN = The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
EDJ = Diluted sample result greater than the calibration range

Chemical Abbreviations:
PFOA = Perfluorooctanoic acid (C8)
PFOS = Perfluorooctanesulfonic acid (C8)
PFBS = Perfluorobutanesulfonic acid (C4)
PFHpA = Perfluoroheptanoic acid (C7)
PFHxS = Perfluorohexanesulfonic acid (C6)
PFNA = Perfluorononanoic acid (C9)
PFDA = Perfluorodecanoic acid (C10)
PFDoA = Perfluorododecanoic acid (C12)
PFHxA = Perfluorohexanoic acid (C6)
PFTeA = Perfluorotetradecanoic acid (C14)
PFTriA = Perfluorotridecanoic acid (C13)
PFUnA = Perfluoroundecanoic acid (C11)
NEtFOSAA = N-ethylperfluorooctanesulfonamidoacetic acid (C12)
NMeFOSAA = N-methylperfluorooctanesulfonamidoacetic acid (C11)
PFBA = Perfluorobutanoic acid (C4)
PFPeA = Perfluoropentanoic acid (C5)
PFHxDA = Perfluoro-n-hexadecanoic acid (C16)
PFODA = Perfluoro-n-octadecanoic acid (C18)
PFPeS = Perfluoropentanesulfonic acid (C5)
PFHpS = Perfluoroheptanesulfonic acid (C7)
PFNS = Perfluorononanesulfonic acid (C9)
PFDS = Perfluorodecanesulfonic acid (C10)
PFDoS = Perfluorododecanesulfonic acid (C12)
FOSA = Perfluorooctanesulfonamide (C8)
NEtFOSA = N ethylperfluorooctanesulfonamide (C10)
NMeFOSA = N methylperfluorooctanesulfonamide (C9)
NMeFOSE = N methylperfluorooctanesulfonamidoethanol (C11)
NEtFOSE = N ethylperfluorooctanesulfonamidoethanol (C12)
4:2 FTS = 4:2 fluorotelomer sulfonate (C6)
6:2 FTS = 6:2 fluorotelomer sulfonate (C8)
8:2 FTS = 8:2 fluorotelomer sulfonate (C10)
10:2 FTS = 10:2 fluorotelomer sulfonate (C12)
DONA = 4,8 Dioxa 3H perfluorononanoic acid (C7)
GenX = Hexafluoropropylene oxide dimer acid (C6)
F-53B Major = 9 chlorohexadecafluoro 3 oxanonane 1 sulfonic acid (C8)
F-53B Minor = 11 chloroeicosafluoro 3 oxaundecane 1 sulfonic acid (C10)

Comments
No additional comments.

Receipt
The sample was received on 7/21/2021 9:50 AM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.1º C.

Receipt Exceptions
Samples received with extremely dark discoloration. Collapsed SW Foam (7-20-21) (500-202623-1)

LCMS
Method 537 (modified): The laboratory control sample duplicate (LCSD) for preparation batch 320-509481 and analytical batch 320-509839 recovered outside control limits for the following analytes: NMeFOSE and NEtFOSE. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 537 (modified): Internal standard (ISTD) response for the following sample was outside control limits: Collapsed SW Foam (7-20-21) (500-202623-1). The sample was analyzed at a dilution and the ISTD response was within control limits. The ISTD is not used to quantitate the target analytes. Both sets of data are reported.

Method 537 (modified): Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: Collapsed SW Foam (7-20-21) (500-202623-1). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method 537 (modified): The concentration of several analytes associated with the following sample exceeded the instrument calibration range: Collapsed SW Foam (7-20-21) (500-202623-1). These analytes have been qualified; however, the peaks did not saturate the instrument detector. The samples were diluted within calibration range, and both sets of data were reported.

Method 537 (modified): The “I” qualifier means the transition mass ratio for the indicated analyte was outside of the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty, and the reported value may have some high bias. However, analyst judgment was used to positively identify the analyte.
Collapsed SW Foam (7-20-21) (500-202623-1)

Method 537 (modified): Results for sample Collapsed SW Foam (7-20-21) (500-202623-1) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits. The percent recovery for the internal standard in the 100X analysis is 113% after the dilution factor was applied to the labeled internal standard area count.

Method 537 (modified): The continuing calibration verification (CCV) associated with batch 320-509961 recovered above the upper control limit for Perfluorotetradecanoic acid (PFTeA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 537 (modified): The concentration of Perfluorooctanesulfonic acid (PFOS) associated with the following sample exceeded the instrument calibration range: Collapsed SW Foam (7-20-21) (500-202623-1). This analyte has been qualified; however, the peak did not saturate the instrument detector. Historical data indicate that for the isotope dilution method, dilution and re-analysis will not produce significantly different results from those reported above the calibration range. Data has been reported per client approval.

Method 537 (modified): The continuing calibration verification (CCV) associated with batch 320-509829 recovered above the upper control limit for Perfluorotetradecanoic acid (PFTeA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCV 320-509829/3).

Method 537 (modified): The Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit: Collapsed SW Foam (7-20-21) (500-202623-1). Generally, data quality is not considered affected if the IDA

Job ID: 500-202623-1 (Continued)

Laboratory: Eurofins TestAmerica, Chicago (Continued)

signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample. The recovery of the IDA in the undiluted extracted was within control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 320-509481. 3535 PFC Aqueous 320-509481

Method 3535: The following sample was black prior to extraction: Collapsed SW Foam (7-20-21) (500-202623-1) 3535 PFC Aqueous 320-509481

Method 3535: Due to the matrix, the initial volume used for the following sample deviated from the standard procedure: Collapsed SW Foam (7-20-21) (500-202623-1). A 10x (25mL) dilution was made on the sample, then fortified with IDA and extracted. The reporting limits have been adjusted proportionately. 3535 PFC Aqueous 320-509481

Method 3535: The following sample is yellow at final volume: Collapsed SW Foam (7-20-21) (500-202623-1) 3535 PFC Aqueous 320-509481

Method 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 320-511910. 3535_PFC Aqueous

Method 3535: Sample is dark brown and opaque. Collapsed SW Foam (7-20-21) (500-202623-1) preparation batch 320-511910 3535_PFC Aqueous

Method 3535: Due to the matrix, the initial volume used for the following sample deviated from the standard procedure: Collapsed SW Foam (7-20-21) (500-202623-1). A 10x dilution was made on the sample, which was then fortified with IDA and extracted. The reporting limits (RLs) have been adjusted proportionately. preparation batch 320-511910 3535_PFC Aqueous

Method 3535: Extract is a golden-yellow color. Collapsed SW Foam (7-20-21) (500-202623-1) preparation batch 320-511910 3535_PFC Aqueous

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Client: ARCADIS U.S., Inc.
Job ID: 500-202623-1
Project/Site: Marinette, WI 30015296.00016 Collapsed Foam

Client Sample ID: Collapsed SW Foam (7-20-21)
Lab Sample ID: 500-202623-1

Date Collected: 07/20/21 09:30
Matrix: Water
Date Received: 07/21/21 09:50

Method: 537 (modified) - Fluorinated Alkyl Substances

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac

Definitions/Glossary

Client: ARCADIS U.S., Inc. Job ID: 500-202623-1
Project/Site: Marinette, WI 30015296.00016 Collapsed Foam

Qualifiers

LCMS

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*5-	Isotope dilution analyte is outside acceptance limits, low biased.
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
E	Result exceeded calibration range.
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Method: 537 (modified) - Fluorinated Alkyl Substances
